Please find important disclaimers at the end of this report.

▼ Market Temperature

My Buy Window is: Open

Our team uses a systematized risk management discipline to mitigate losses in a falling market. The specifics of this sell discipline may change over time (you can request a summary of the firm's current approach by contacting info@roppelreport.com, but generally the firm will sell off positions in multiple tranches as a security's price drops from a specific target level (commonly its purchase price).

All buy ideas require a significant pickup in volume to validate the breakout or buy point—minimum volume pickup of 40%, ideally 500%+.

0 is the most negative term outlook, and 10 is the most bullish. It's reasonable to say that if the market temperature is 5, your total exposure could be 50% long.

Short-term Trend 1 to 3 weeks (6.5/10)

***Please note that the short-term temperature can change at any moment, and I have the least confidence in this time frame.**

Intermediate-term Trend 4 weeks to 5 months (7.5/10)

Long-term Trend 6+ month Trend is up: Bullish (10/10)

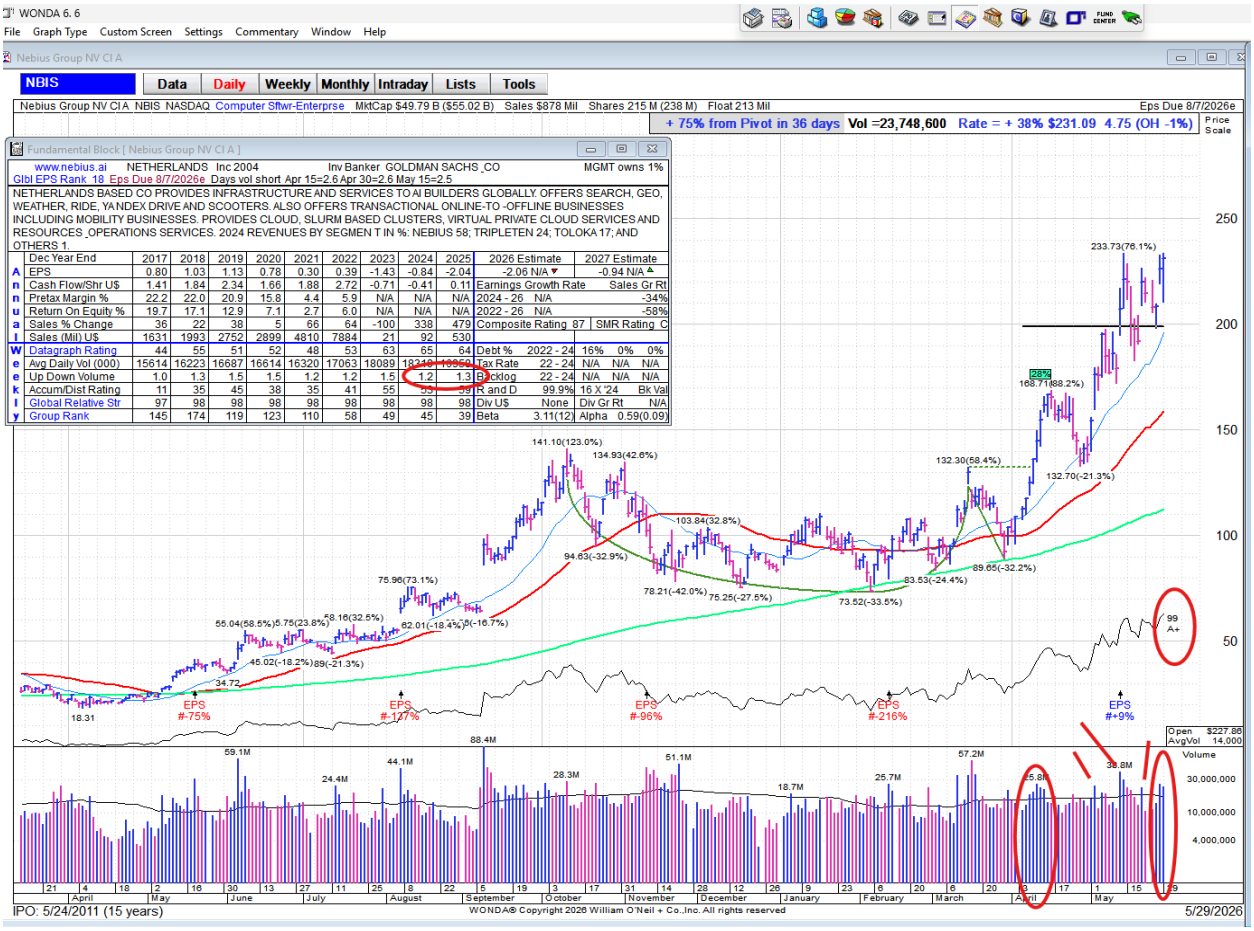
Because sentiment and many measures became deeply oversold in April of 2025, to levels signaling panic selling. Conditions like the market is experiencing almost always result in significantly higher prices in 12 to 18 months. We remain in a Raging AI-driven, disruptive tech Boom that may be turbocharged by a new pro-growth President. This is a very potent cocktail of technical and fundamental variables that historically give birth to new bull markets that can rise 100% and spawn dozens of new leaders that rise hundreds of percent, very much like 2024, except longer in duration, when not sidetracked by unforeseen black swan asteroids.

Regardless of what the market does in the next few months, I am very confident that it will be significantly higher in 12 to 18 months!!!!!!!!!!!!!!!!!!!!!! I can't believe we are going to get another opportunity to perform like 2024!!!!!!!!!!

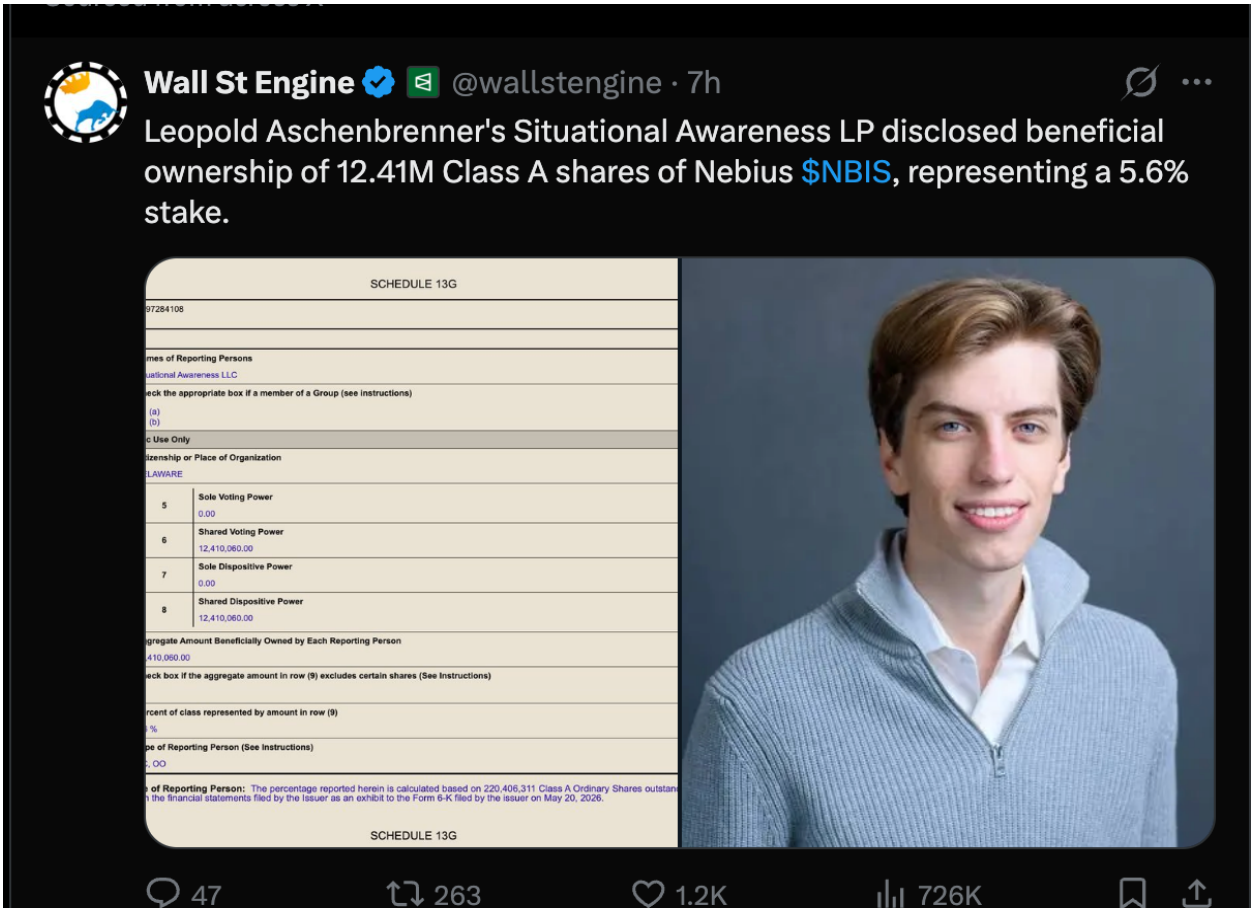
▼ Best Actionable Ideas

This list is only to be utilized when the Market is in an uptrend. Ideas are only actionable at or above pivot points on significant increases in volume.

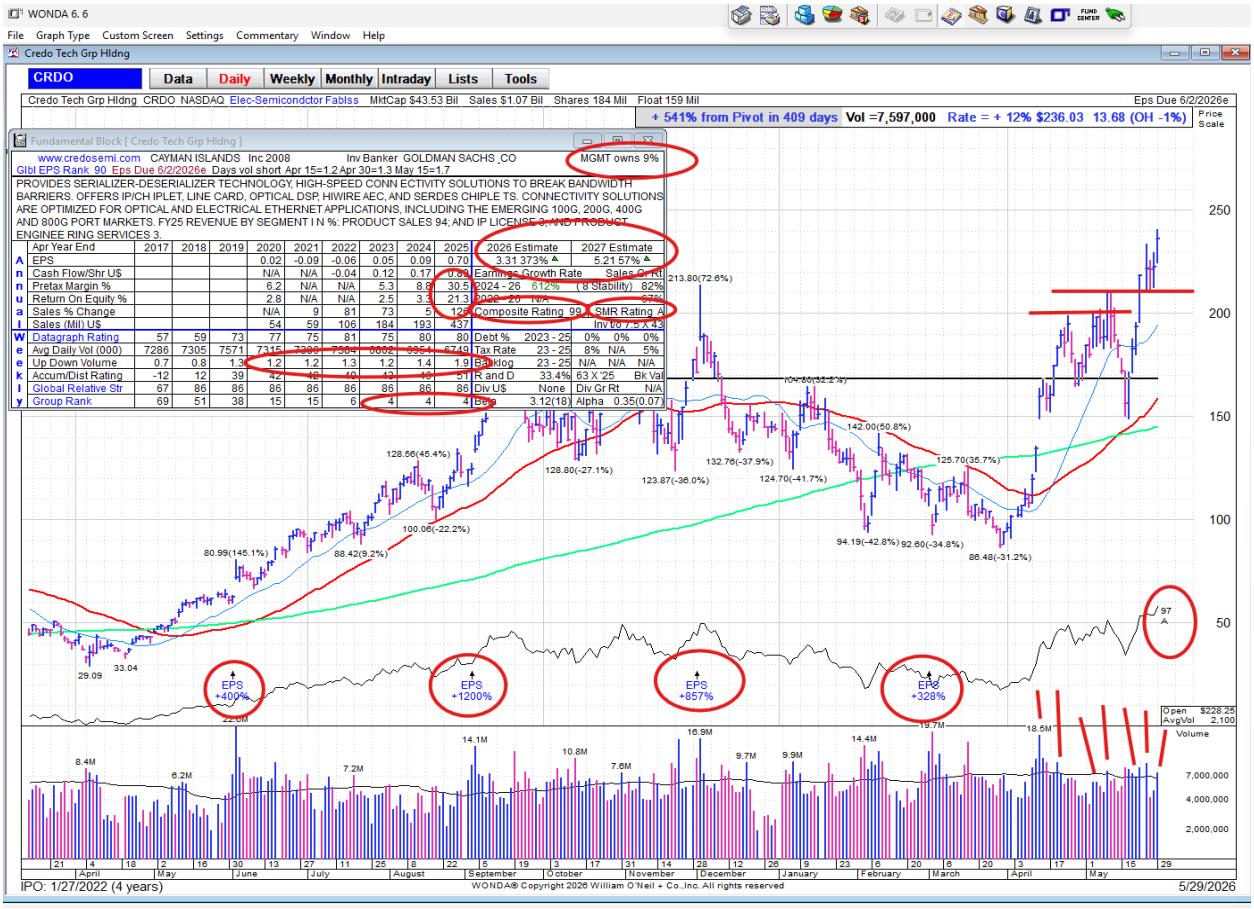
LITE: Friday was the first close below the 50DSMA, but it did rally to close at the top of the range. LITE is now in a precarious position. Positions can be built if it gets back above 50, but I would build slowly and only at higher prices. A weekly close with a losing position is a good reason to trim or sell. But I really try to wait to see how stocks close, and LITE did a lot of what's necessary to sit with most of my position, but it's on a short leash. *****See what could go wrong sector below.



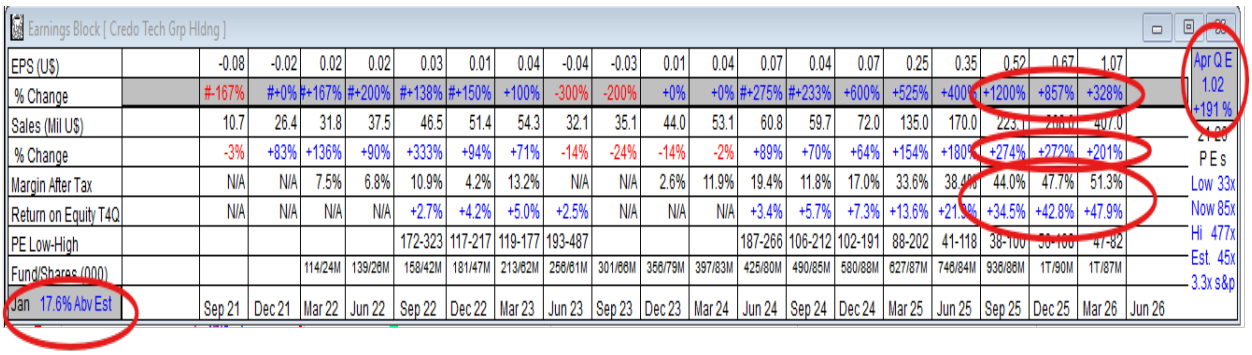
NBIS is not currently an earnings story; the focus is on compute capacity. Last week, Leopold Aschenbrenner, the new Pied Piper of Wall Street, disclosed a $2.4 billion to $2.9 billion position in NBIS, representing roughly 35% of his fund. He has also made BE one of his largest or the largest positions. This chart looks excellent and a move into new highs would be an add point, but too short of a digestion to start new positions, unless you are a Cowboy open to a higher risk of failure. @CubbieBears has been ALL OVER NBIS all year.



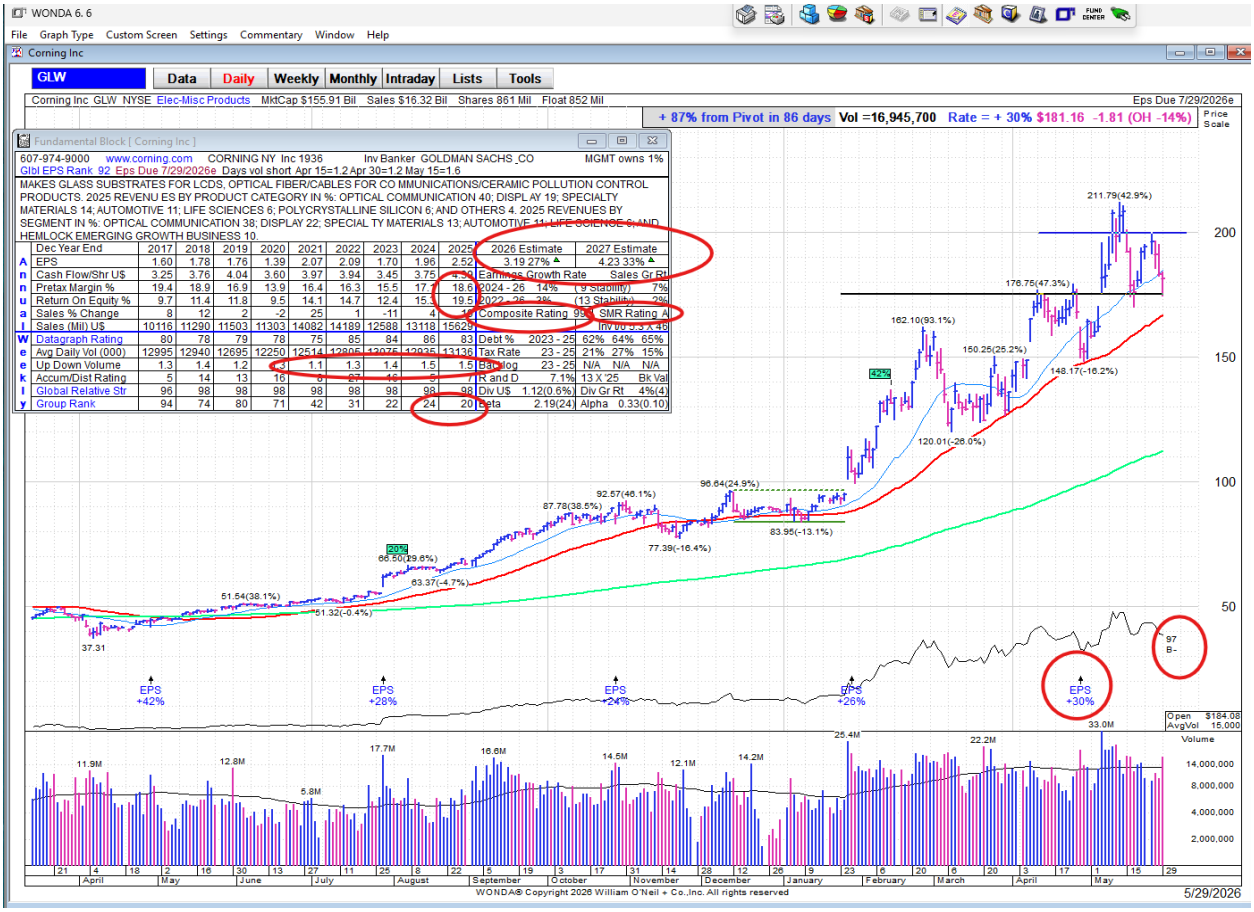
- ***Nebius (NBIS +16.3%)*** *and* ***Bloom Energy (BE +10.5%)*** *are sharply higher after announcing a long-term agreement to deploy Bloom's fuel-cell technology to help power NBIS's AI infrastructure buildout.*
- *This is an important development for NBIS as it works to scale its AI cloud capacity, with power availability increasingly becoming a key bottleneck for AI data center growth. For BE, the deal further reinforces its role as a behind-the-meter power provider for large-scale compute infrastructure.*
- *Under the agreement, NBIS will purchase the power capacity and associated electricity generated by Bloom's systems, while BE will install, operate, and maintain the systems. The first project is expected to provide 328 MW of installed capacity and become operational this year.*
- *Importantly, Bloom's modular fuel cells can be sited and commissioned on accelerated timelines, reducing dependence on new transmission buildouts and helping Nebius bring compute capacity online faster.*
- *Overall, the long-term partnership supports NBIS's AI buildout while further validating BE's fuel-cell technology as a scalable power solution. The agreement is expected to come on in three phases, each with a 10-year supply term, with aggregate service fees of up to $2.6 bln.*



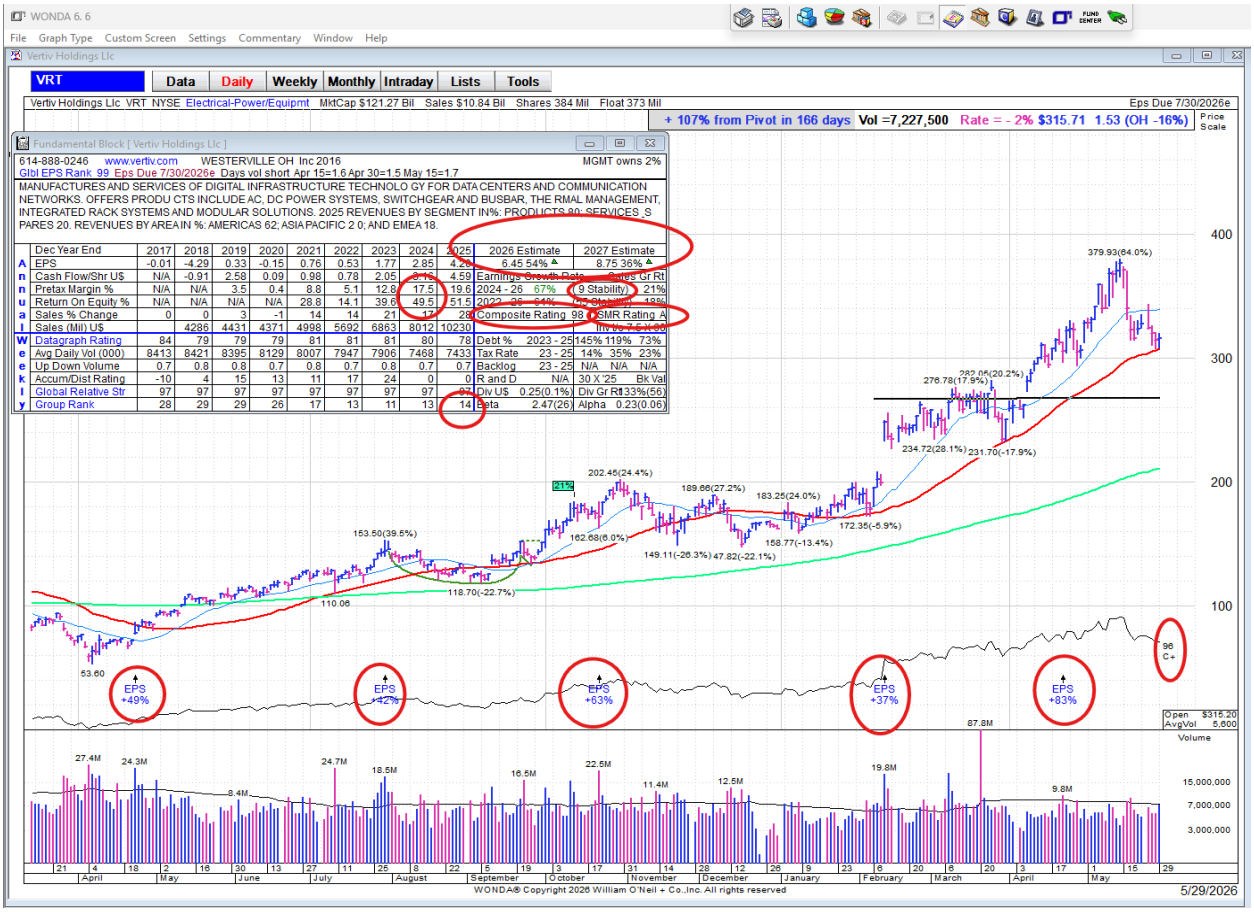
CRDO looks a lot like ALAB before it soared higher. CRDO reports after the close this Monday, and if earnings beat, there will be a high-risk gap opportunity. Risk management will always be the zero-defect job #1.



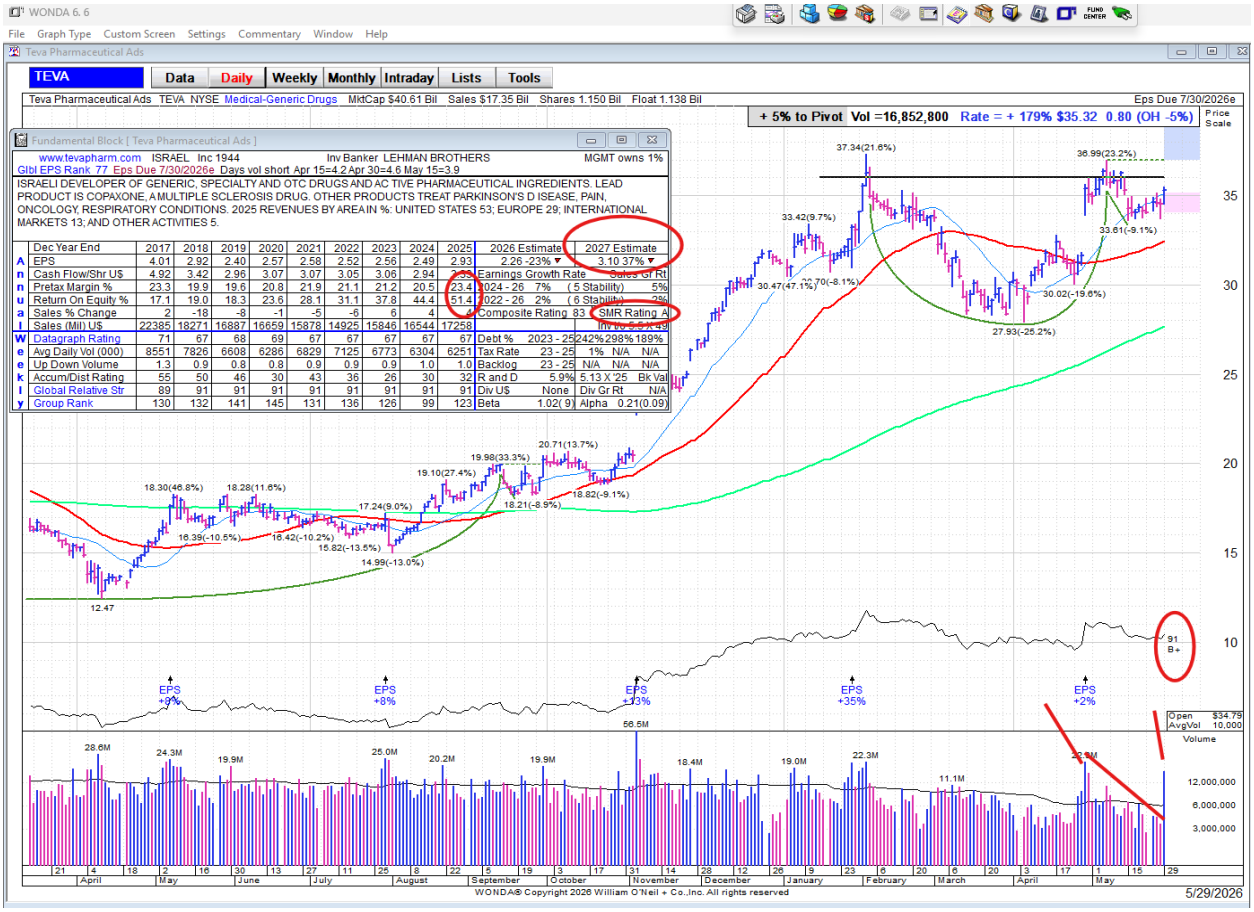
CRDO: Blockbuster 3X sales and earnings, plus epic margins and ROE!!!!!



GLW is top-notch institutional quality, 99comp and mega cap liquidity. Friday's upside reversal, top-tick close on a pickup in volume, may be signaling the 21 DSMA will be support. I see an add opportunity over $200.00 and into new highs. *****See the "What could go wrong" section below.

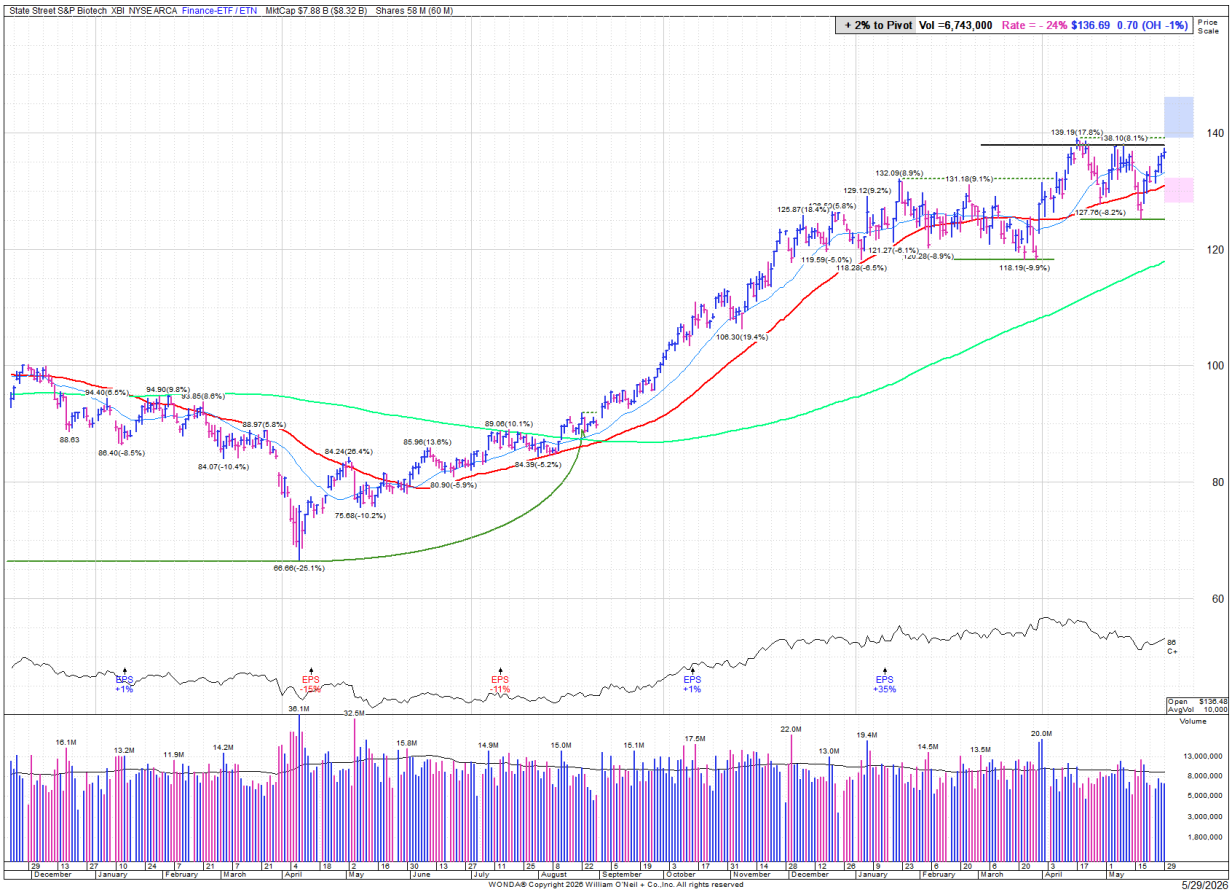


VRT is one of the highest TML quality, #9 stability, 98Comp A SMR. Names like this are nearly always extended. Positions can be built starting right here.

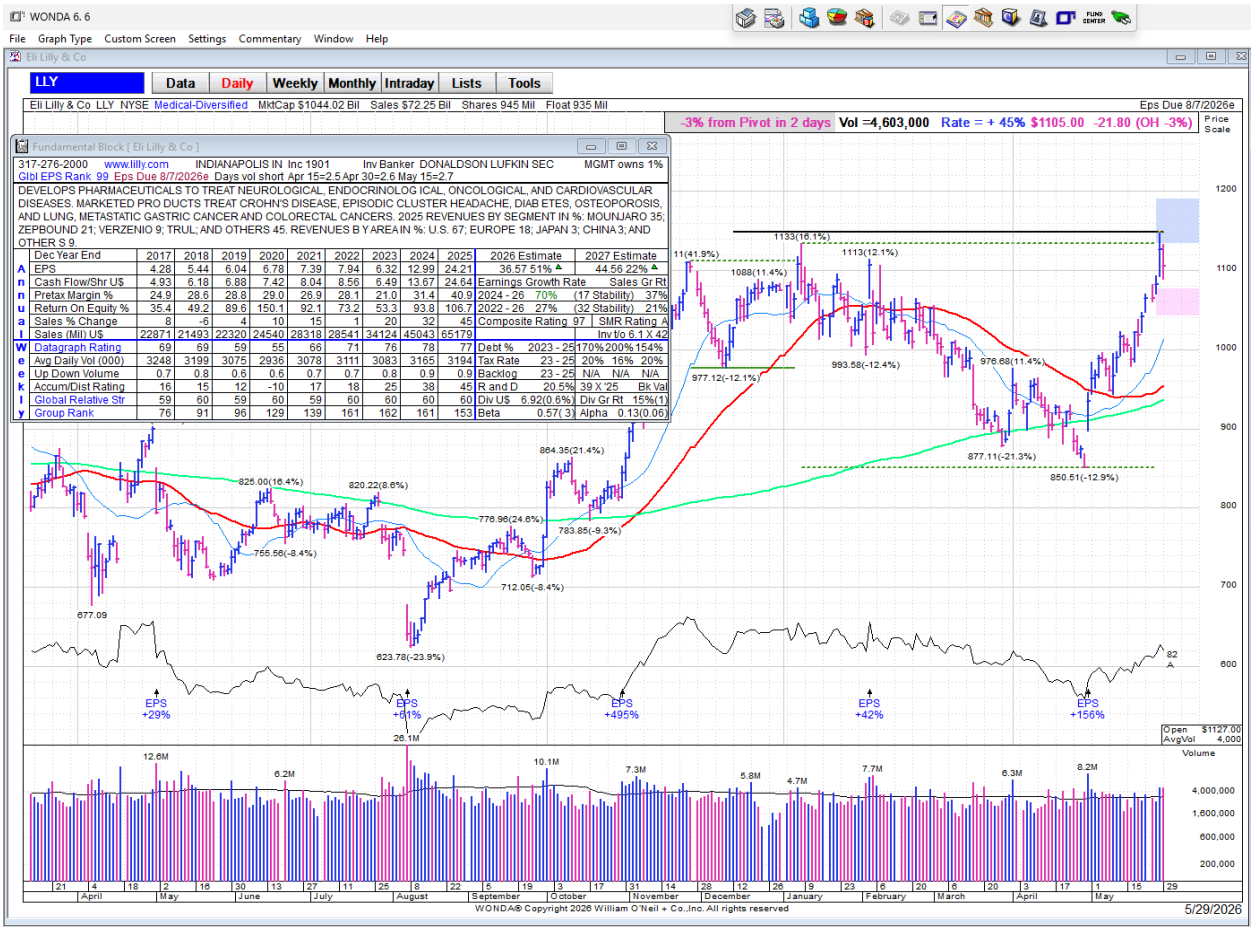


TEVA is sporting a very nice C&H!!! With a shakeout in the handle. Pivot over $37.15ish.

Teva Pharmaceutical (TEVA, BUY, PT $40) Ecopipam Phase III Published; New $1B Tourette's Launch Starting 2027 - *Emalex published Phase III Tourette's data in JAMA and the publication suggests a strong 50%+ reduction in relapse risk for peds and a differentiated safety profile vs antipsychotics, supporting approval in H2:27. We cont to like the deal given it's an easy neuropsych tuck-in for a $1B US peak sales drug that's clinically derisked asset, which can add another revenue driver in the medium term that should also lift overall margins too.*



XBI: I love the fundamentals and the base. Pivot over $139.30.



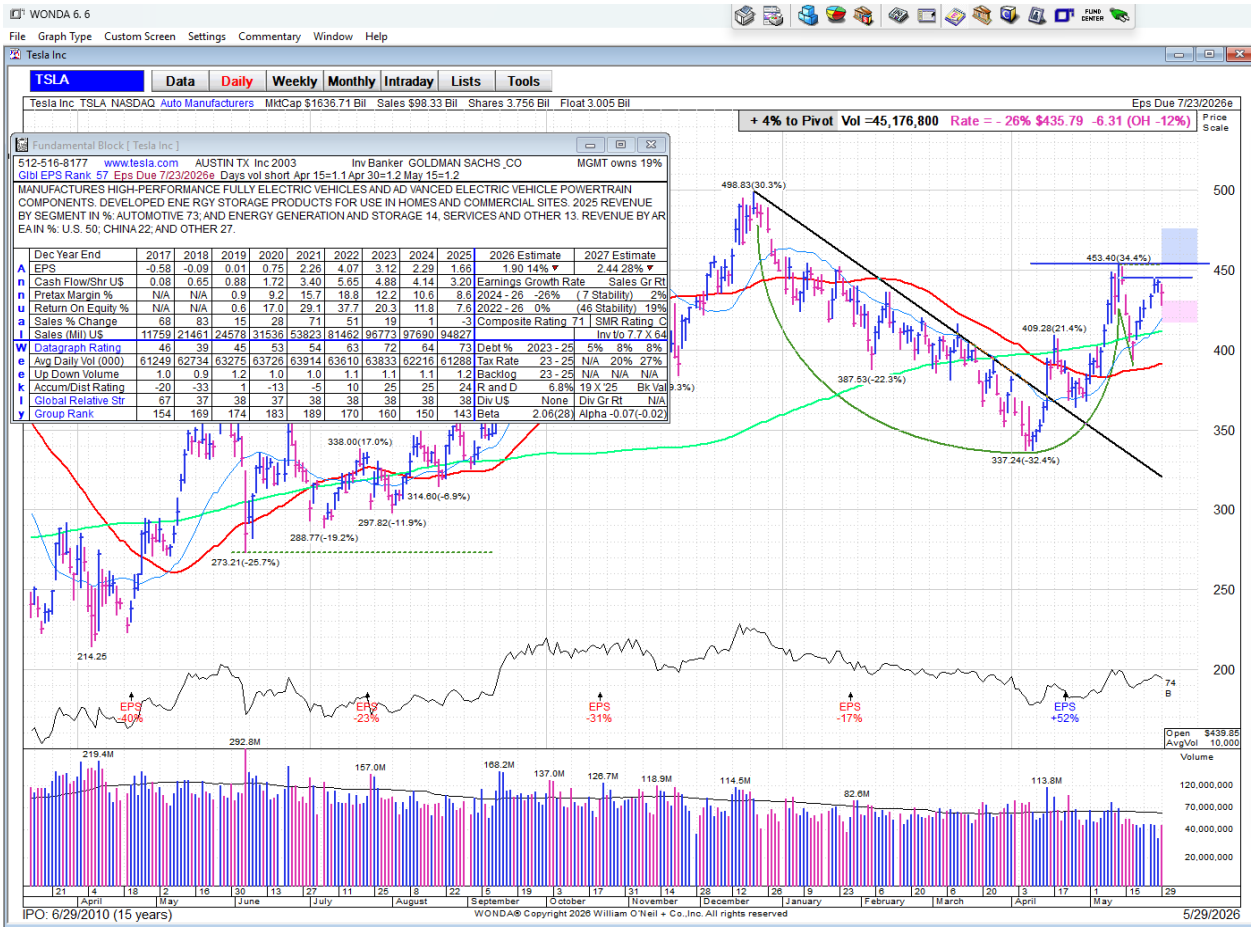
LLY: The news about RETA is Incredible. The results are incredible, and the market has taken notice. I suspect a handle is in progress. Wait for a durable pivot.

Prof G has some brilliant thoughts. Open the link below on LLY!!!

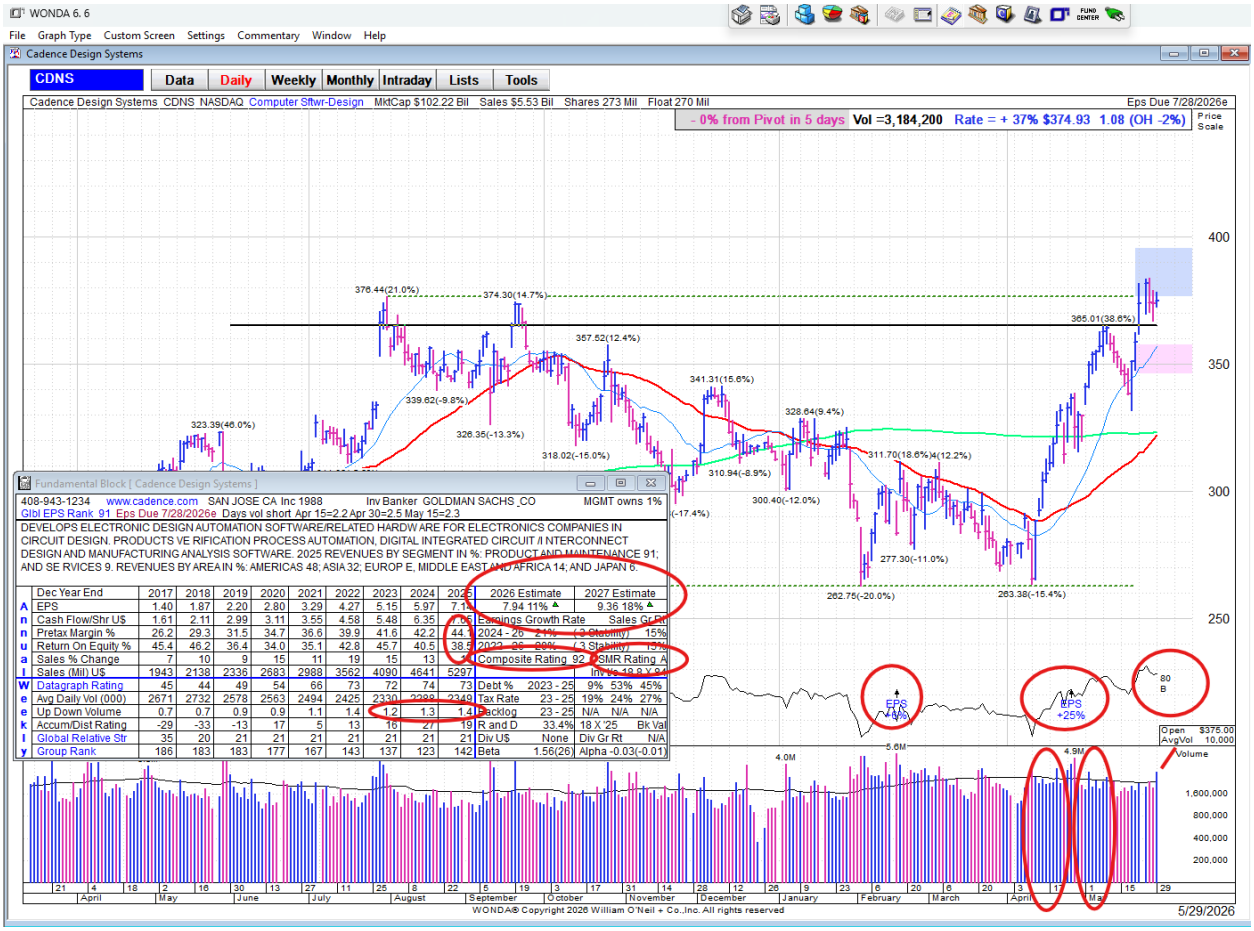
https://www.profgalloway.com/americas-best-bet/

https://www.zerohedge.com/the-market-ear/ozempic-was-warm-reta-killer?utm_source=premium_daily_newsletter&utm_medium=email&utm_campaign=8150

Lilly (LLY, BUY, PT $1330) LLY: Thoughts on positive Triple G data - *Retatrutide Ph3 TRIUMPH-1 data is out. We note 1) reta achieved Bariatric surgery-like WL (pbo-adj WL up to 26%, efficacy estimand); 2) estimand delta trended to upper end of late-stage inj. agents (up to 5%), in line w/ the AE-related d/c profile (up to 6.4% pbo-adj); 3) AE profile came roughly in line w/ TRIUMPH-4 (up to 25% vomiting, 42% nausea, 32% Diarrhea). While we expect Reta to be used in 5-10% morbidly obese pop, this gives LLY sig tx optionality.*



TSLA: I have been waiting for years for TSLA to offer a proper pivot. Initial positions can be built over $445.75, $453.50, but $500.00 is the big show pivot!! The real move does not start until $500.00 is definitively exceeded and held for 10 days-ish.



CDNS: Jensen Huang's positive comments about CDNS have made me very interested in this stock. The market has semi-discovered the news, but with RS down at 80, it's still 90% unknown, just the way I like it.

CMC Crypto Fear and Greed Index

See API Details

Discover our Fear and Greed Index, a powerful tool that analyzes market sentiment to help you make informed crypto investment decisions. Stay ahead of market trends with real-time and historical data available through our easy-to-use API.

BTC: I do not like the looks of the potential bear flag. A move over $82,900 would be a clear signal of a bullish trend change. The halving cycle turns bullish this December.

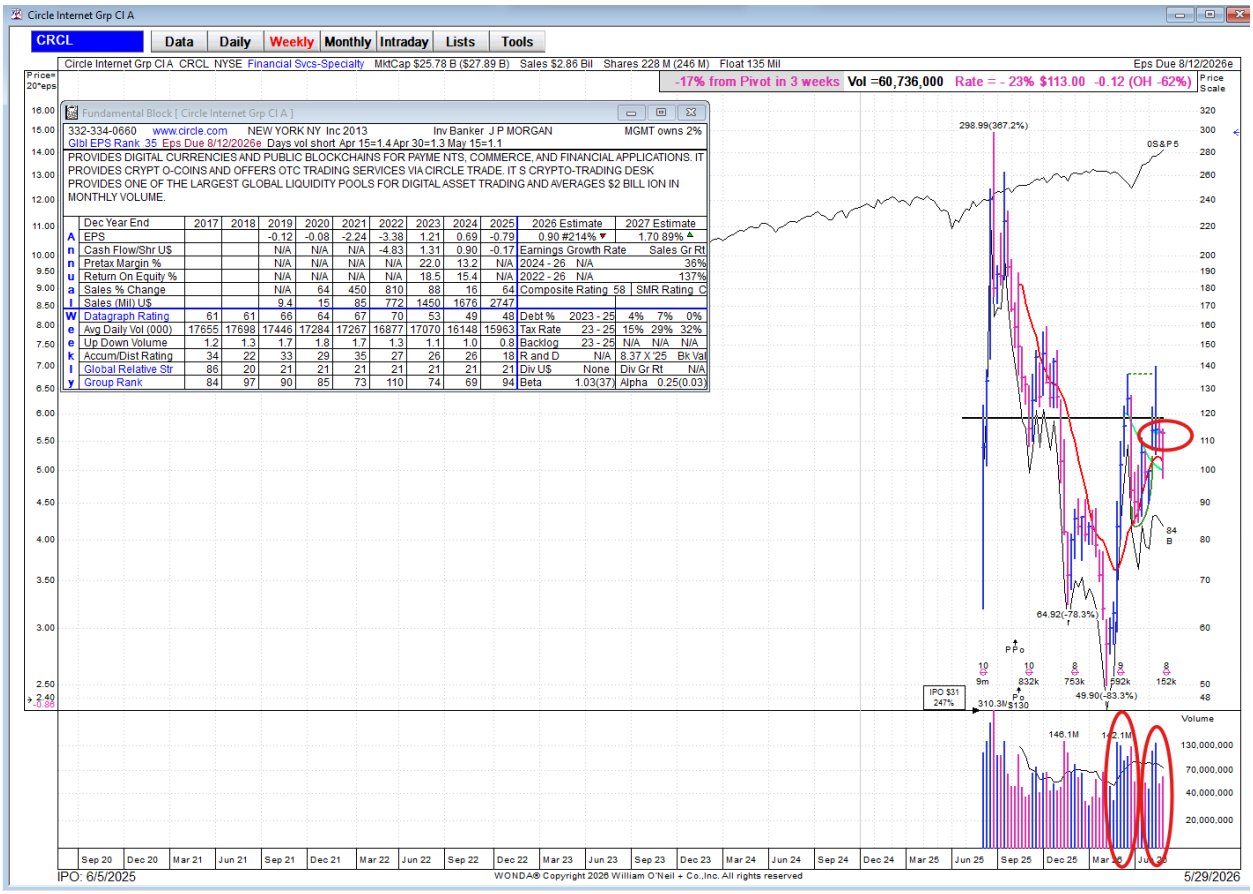
CRCL: 40K to 50K people have enabled their AI agent with stablecoins. I think it's possible that by 2030ish, BILLIONS of agents will be empowered with stablecoins. I know it's hyperbolic, but I think it's obvious it's going to happen. The speed of network effects gunned by AI agents is likely to exceed anything the world has ever experienced. My AI-savvy friends tell me we will not recognize the world in 18 months, and most people are unaware because they are not using or full blow resisting AI. We just need the market to believe it as I do. Until CRCL breaks over $140.00, the market is not picking up what I am putting down. I could be early, possibly months early.



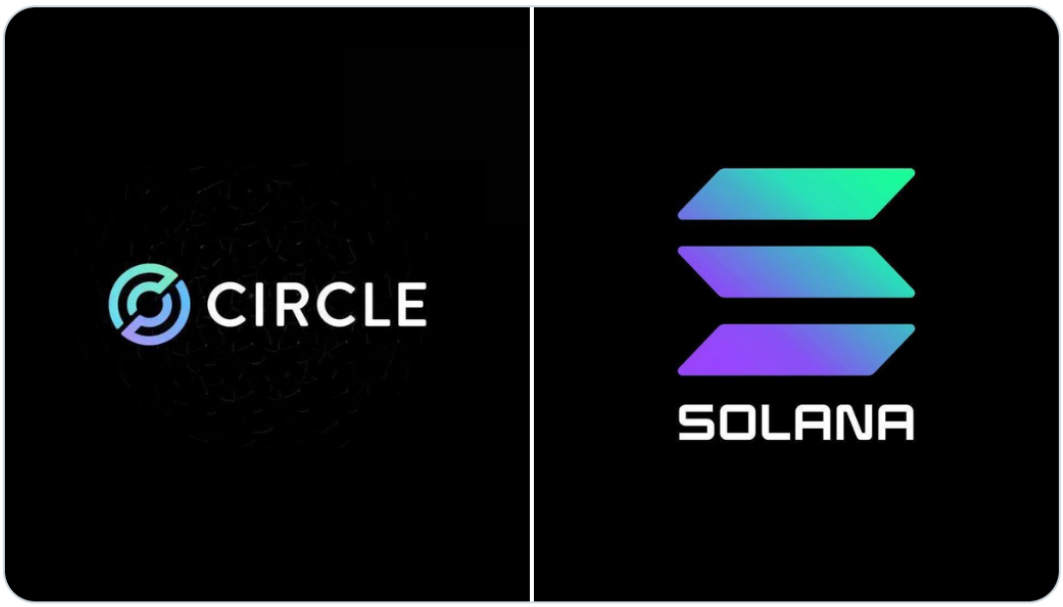
CRCL: 4WT & Massive shakeout that has made the foundation stronger, which should make any breakout over $140.00 more stable and dependable.

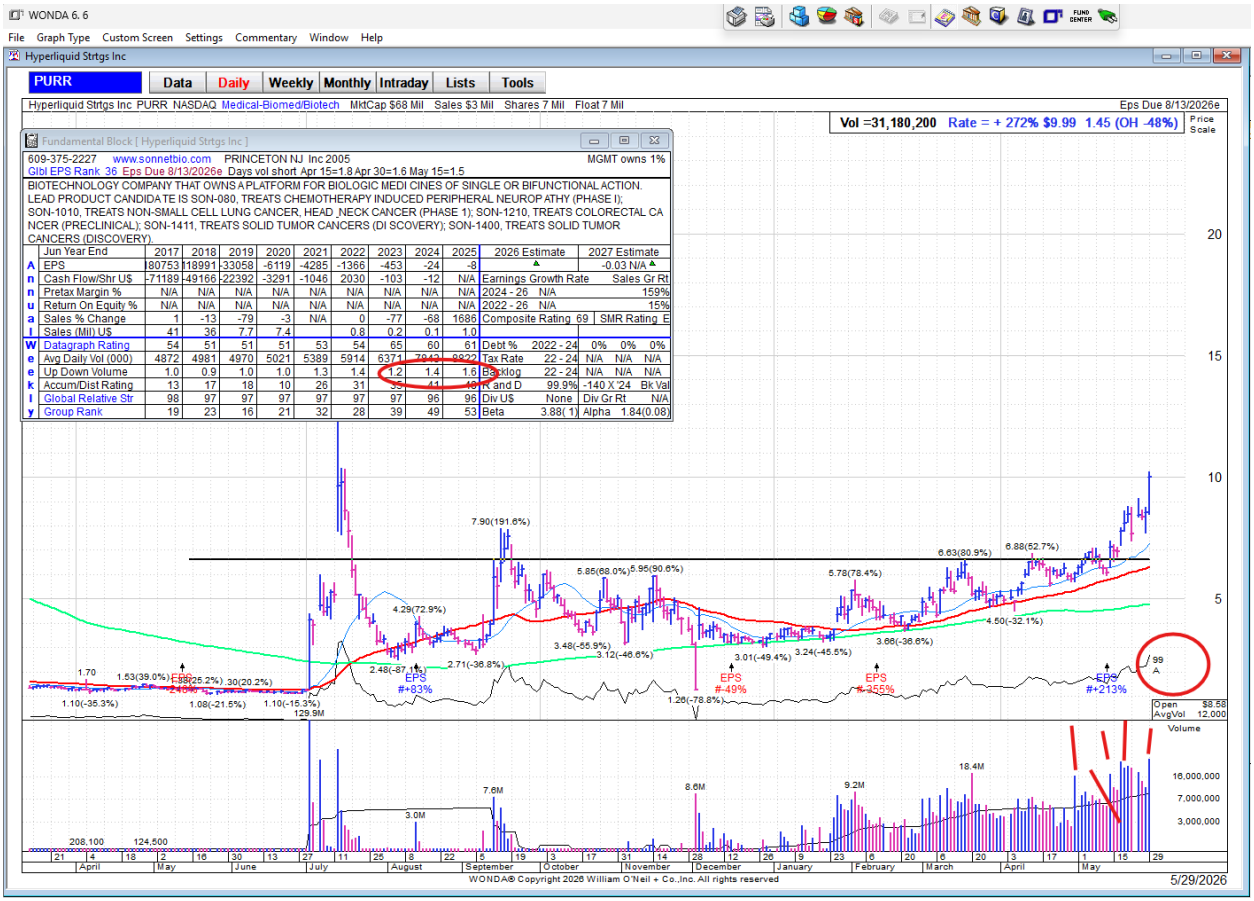
I am patient and will continue to stalk CRCL for a breakout over $140.00. I am considering options for the January 2027 expiration.

- *KeyBanc Capital Markets started coverage on **Circle Internet Group** (CRCL) at Sector Weight; the model impact of assumed net reserve margin dilution tied to distribution and uncertainty around the extent to which Circle can monetize flows (vs. stock) are principal considerations that underpin their neutral stance. These factors are balanced by their constructive view on Circle ecosystem expansion and appreciation for category-defining product development/recent commercial momentum. A large and growing TAM in payments (incl. agentic) and capital markets support durable growth tailwinds, but they see this as a consensus view.*

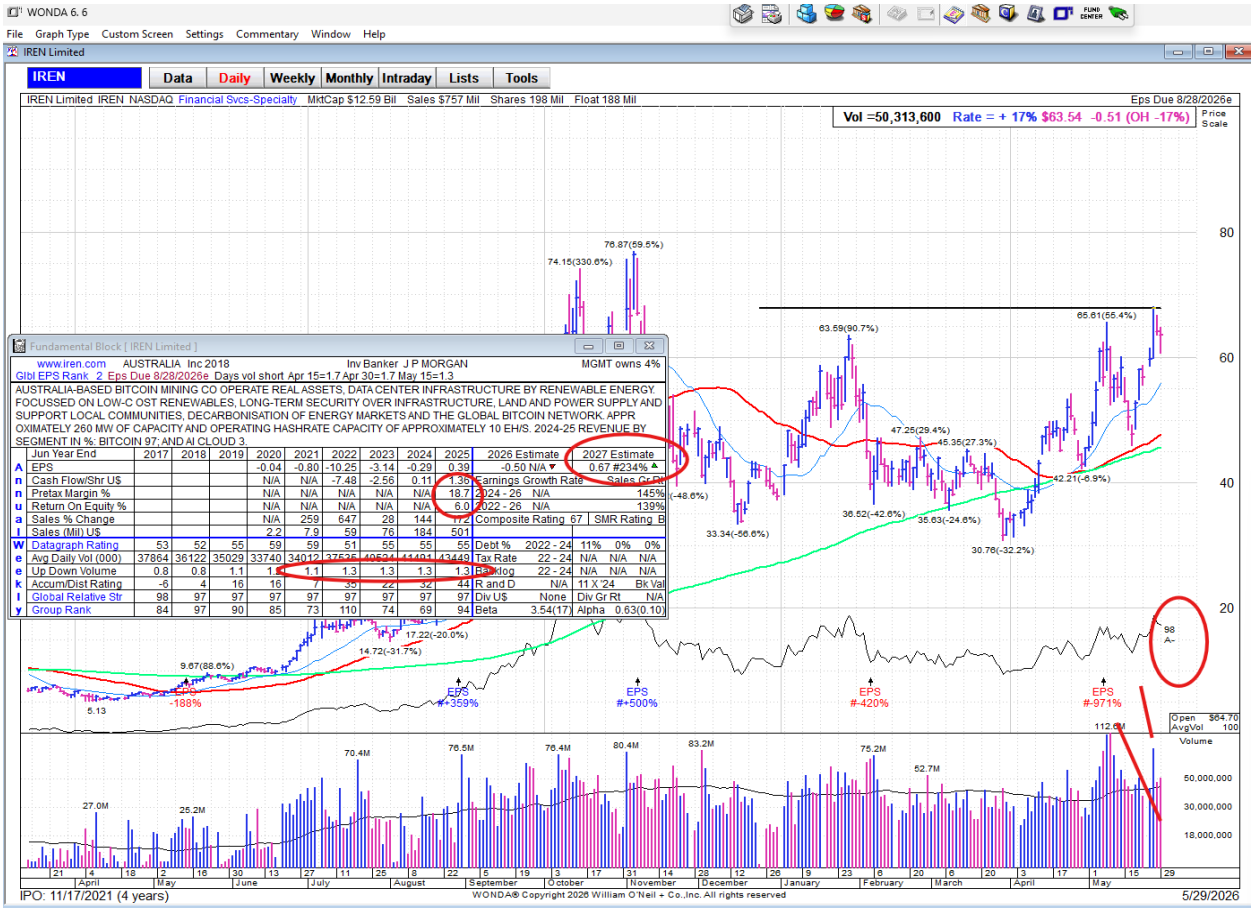
Cointelegraph @Cointelegraph · 1h

⚡ NOW: Circle minted another 250M $USDC on Solana today.

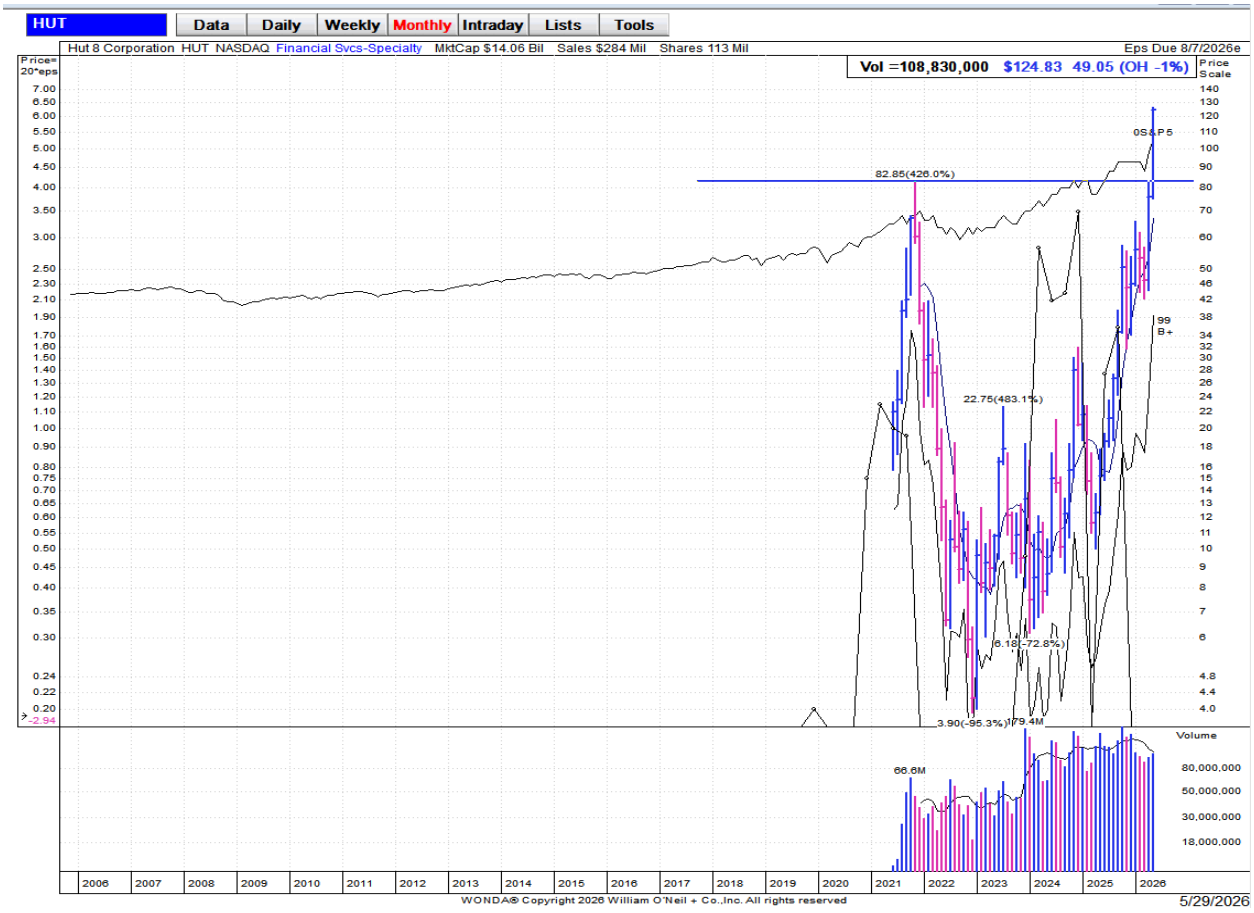




PURR has achieved escape velocity. Now extended.



IREN is actionable over $68.30.



HUT: Crypto miners are on FIRE as it's all about compute.

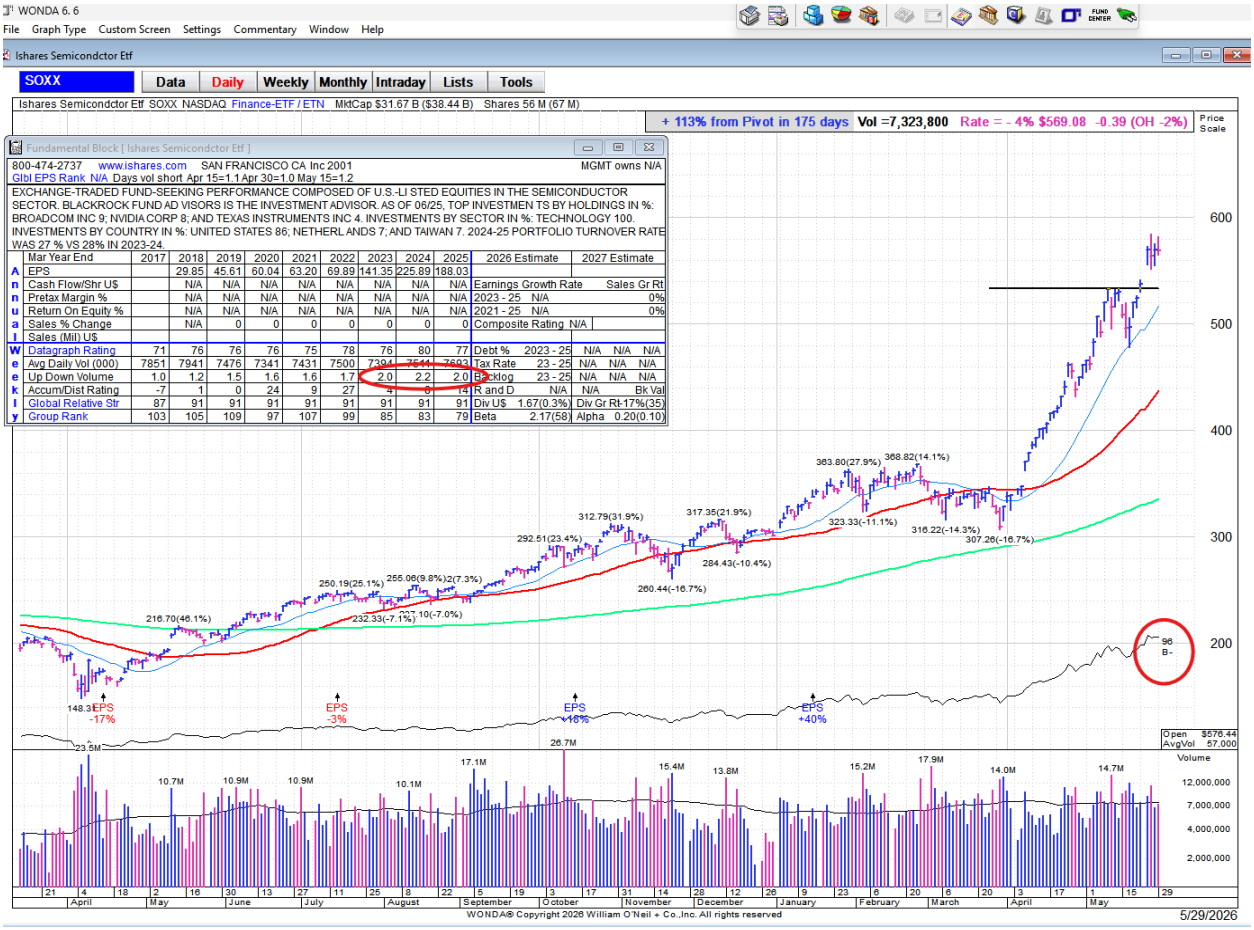
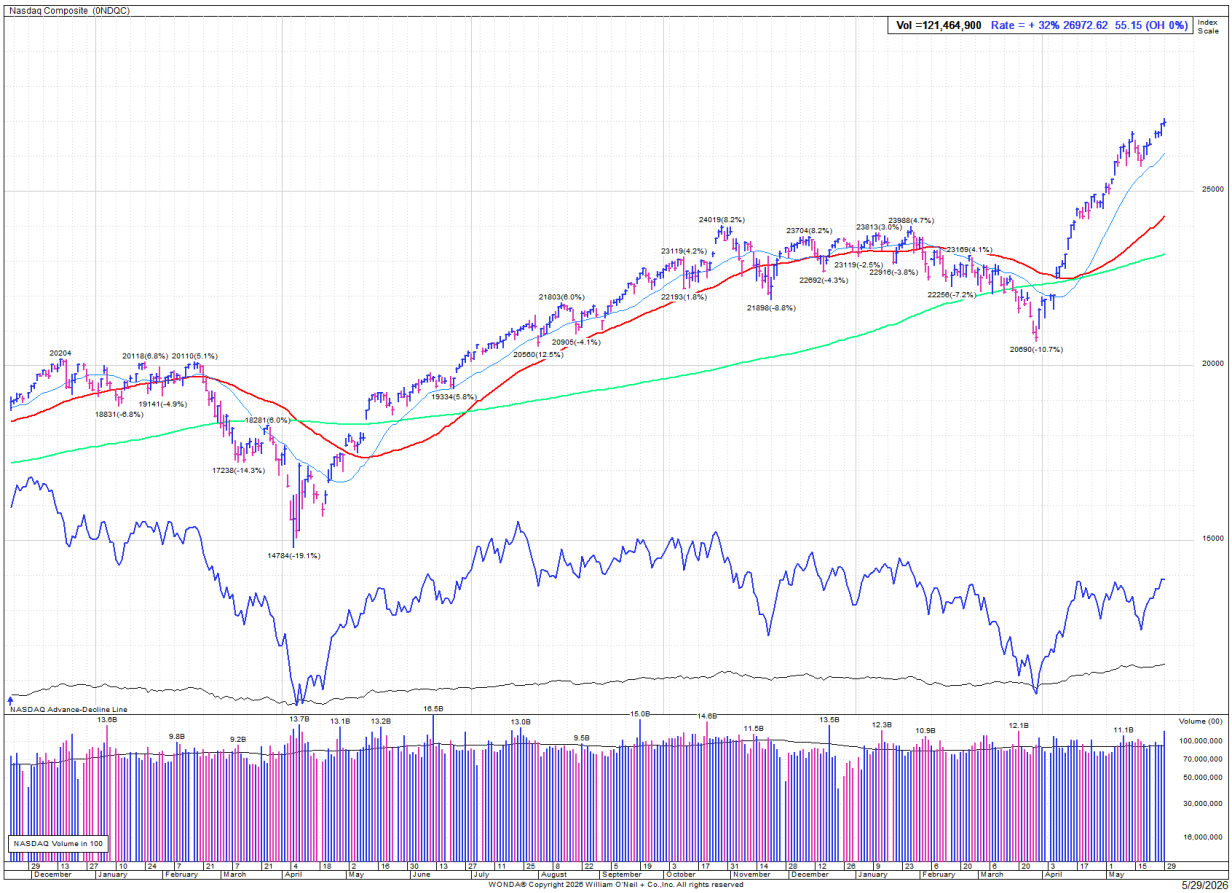
NBIS 231.09 4.75 2.10 23748600 40



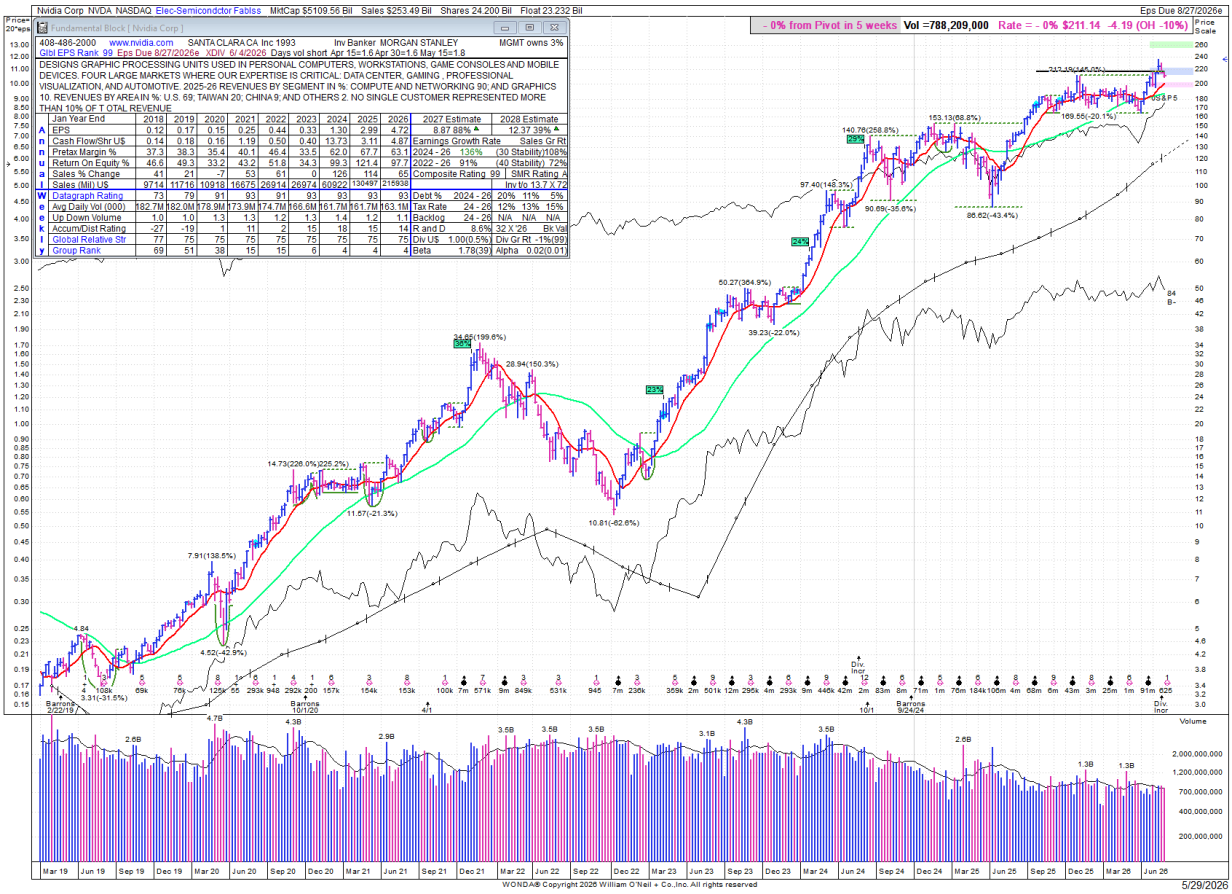
SOXX is the most important index in the world. And it's on FIRE, but last Wednesday and Thursday, it gave minor signals that a digestion may have started. This is a once-in-50-year, insane, sector run. Print this and frame it.



NASDAQ: Last week, there were two days of bad news regarding Iraq, and the market barely flinched. When the market ignores bearish news, it's a bull market. The benefits of AI have gang-tackled the market. The market is not focusing on Iran or crude. It's all about AI gunning earnings and expanding margins. The public is bearish, and the fund managers are whining that they can't keep up with the indexes. Everyone, institutional and retail, hate this rally and continues to focus on the negative. I must admit, I have underplayed this rally. By historical standards, I am having an exceptional year, but considering what has been possible, I am disappointed. It has happened many times in my 40-year career. It will happen many more times going forward. What keeps me optimistic is that I know history and I know myself. I have overcome every obstacle the market and my psychology have thrown at me, and my performance has moved on into higher and higher all-time new highs. Every day, good or bad, is just one day. I can't get too cranky or excited about one day, week, or month. I lean into my historic resilience.

Last Friday's close was *insane*; several of my positions were down, some big, and then they ramped higher into the close. It was stunning, and in the face of NVDA and INTC selling off, it made it that much more powerful. I am well aware there was a big index re-balancing, but that usually results in massive volume, not massive price moves as market makers game the changes.

- *Northland downgraded **Intel** (INTC) to Market Perform from Outperform on valuation. INTC is making measurable progress in its turnaround, and they expect estimates to rise as demand for server CPUs picks up. However, they are modeling overall datacenter spending to decline in CY27 as hyperscalers become increasingly cash-strapped. Assuming INTC's DC business grows by 40% in CY27, they get to an estimate of $3.20 and a P/E multiple of 38x the out-year. Even under this optimistic scenario, shares are expensive. They suspend their price target.*

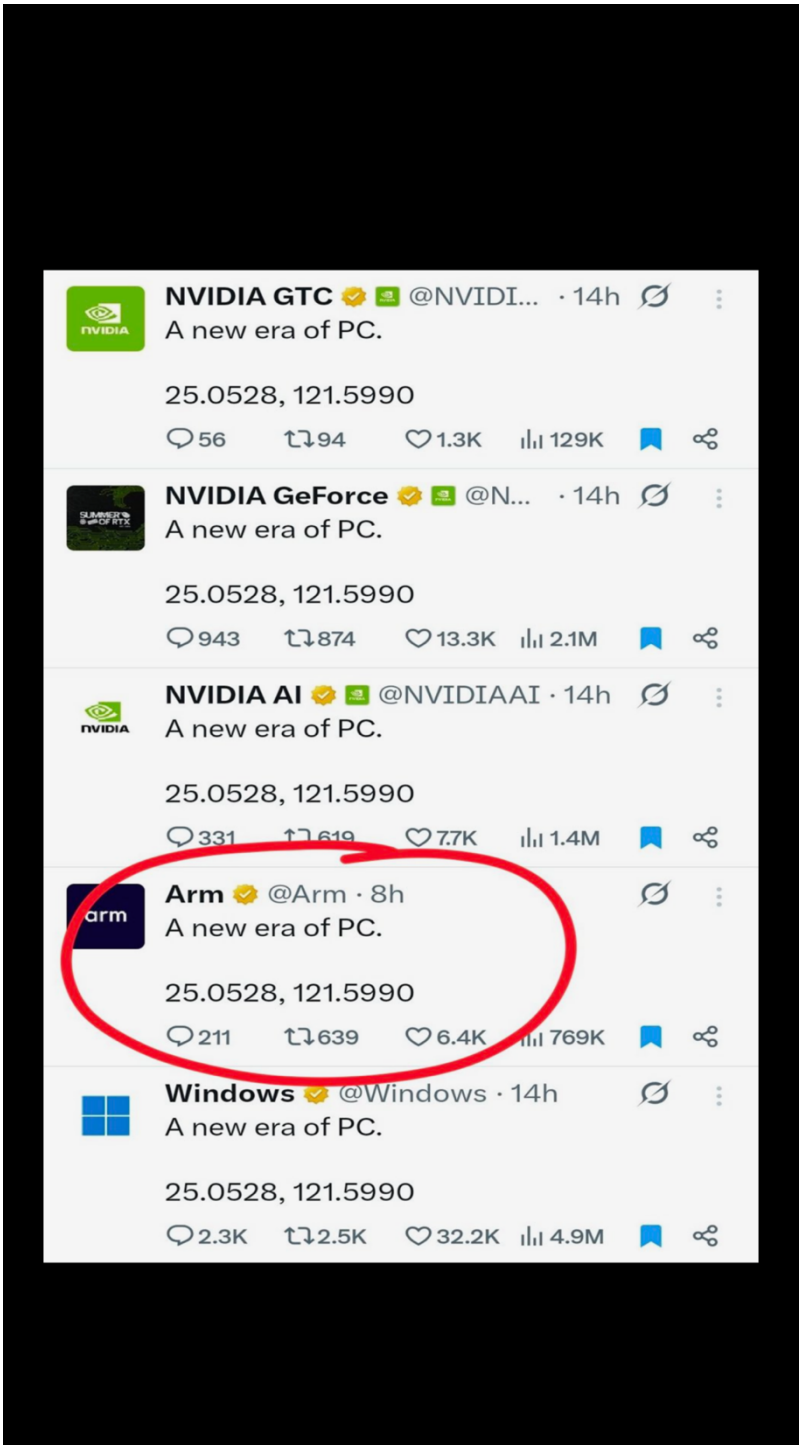


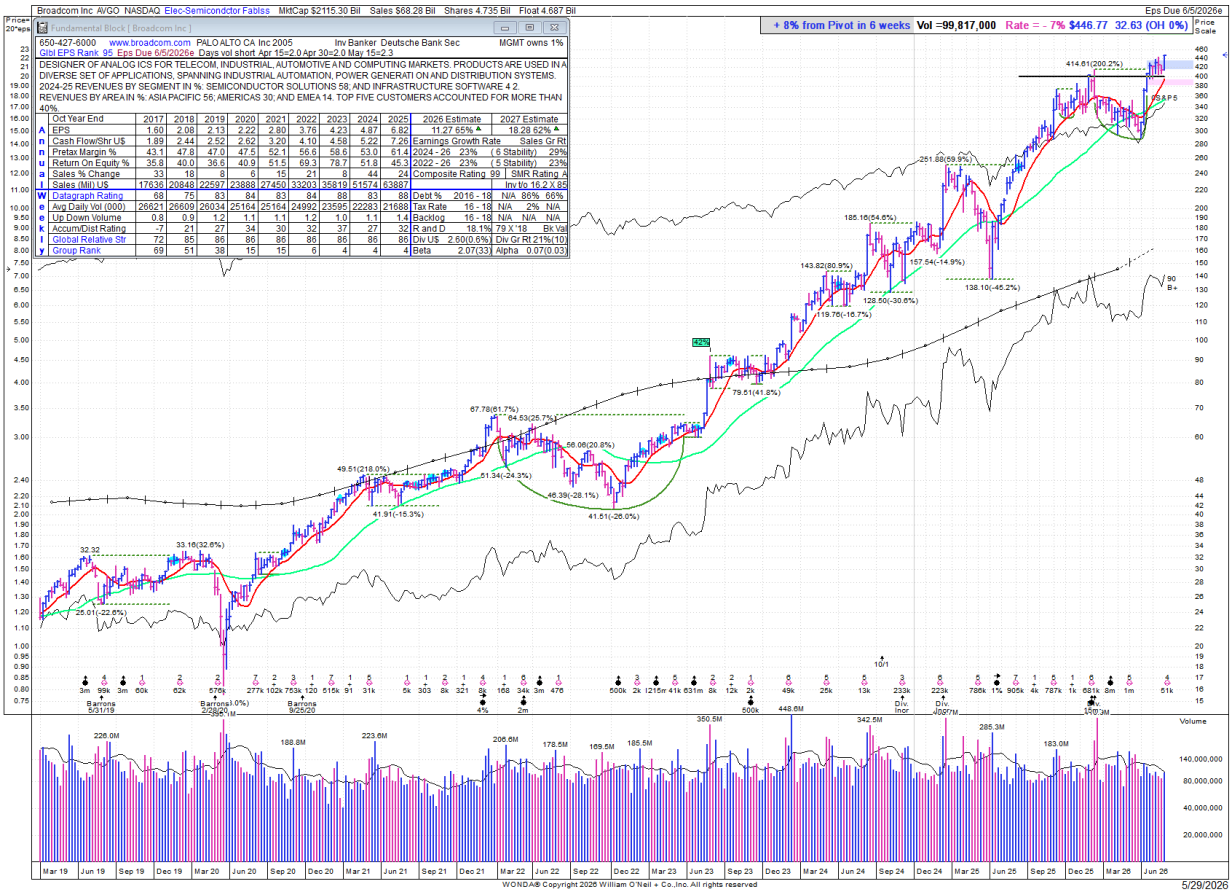
NVDA

NVDA (Curtis, Buy, PT: $300) *Co. reported another strong quarter this week, with AprQ revenue coming in ahead of expectations at $81.6B (+20% Q/Q). The Blackwell ramp and inflection of inference demand drove the beat, with DC revenue reported ahead of expectations at $75.2B (+21% Q/Q). Notably, the hyperscale business segment grew 191% Y/Y and we expect this to continue in the NT as Rubin begins to ramp in 3Q. In our view, NVDA continues to look remarkably cheap in light of this growth, with shares trading at 15.5x our F28 EPS estimate. Meanwhile, the co. authorized an additional $80B in share repurchases on top of the $39B remaining and raised the quarterly dividend to $0.25 per share.*

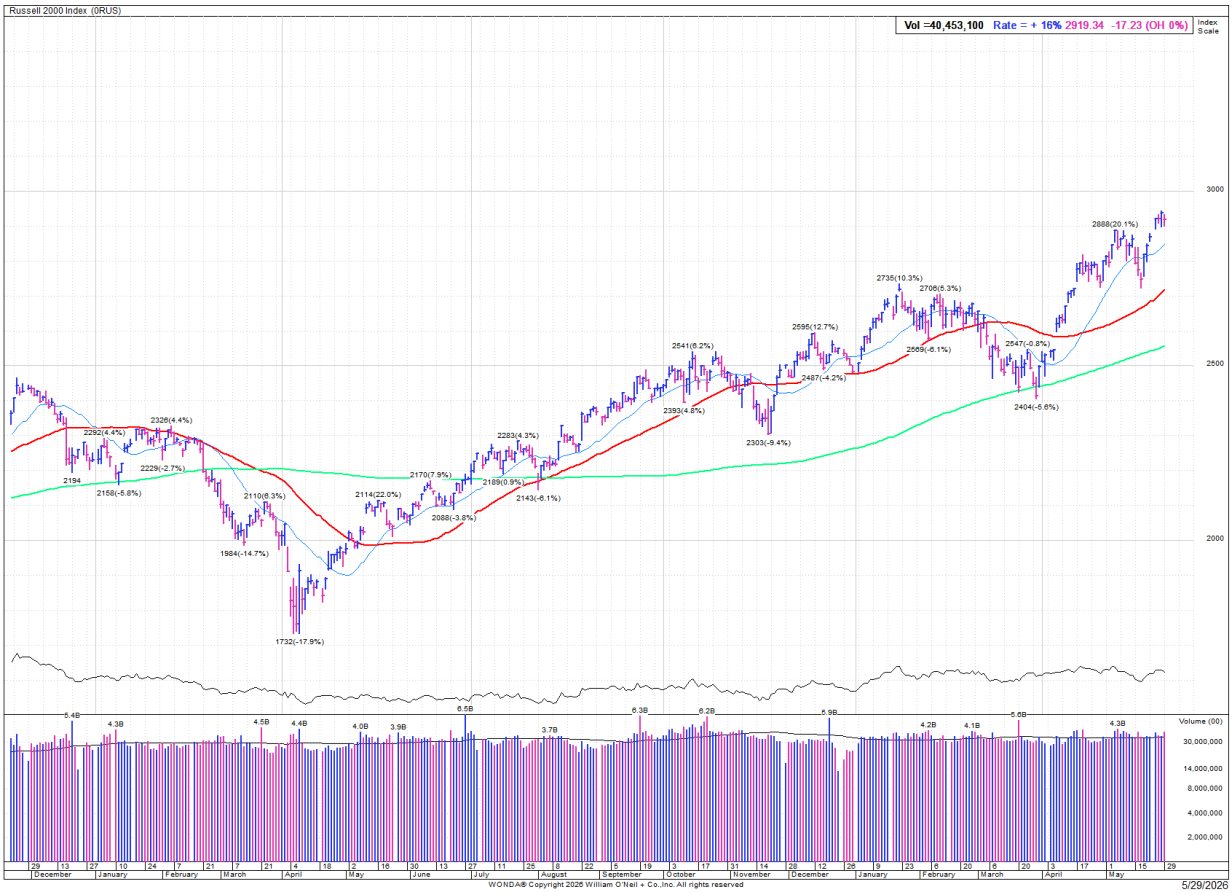
NVDA, AVGO (Curtis, Buy) *We're out with takeaways from our time in Taiwan meeting with semi suppliers. The race for compute is in full effect, with supply constraints likely to extend into C28/29. Strength in AI has redirected capacity from PC and mobile, and we think the server CPU market may sustain 20-30% unit growth given the rise in agentic workloads. We believe NVDA Blackwell capacity will continue to ramp, while the timing of the Rubin ramp remains a little in flux as development continues. On the ASIC side, our checks on total volume for TPUs were a little mixed with some still pointing to 3M units for C26, though others talk of 3.6-3.8M units for C26 (+150% Y/Y). Broadcom will likely add another 30-40% capacity in 4Q26 to support the ramp of the TPU v8i and Meta's MTIA 400 (Iris).*

NVIDIA Corporation (NVDA, BUY, PT $300) Delivering on All Fronts with CPUs Another Leg of Growth - *Another prime-time beat and raise from NVDA with Blackwell continuing to accelerate and management now expecting $20B of CPU/server revenue in F27 alongside the release of Rubin in 3Q. We remain cautious on whether investors will return to the name given concerns around merchant XPUs and compute diversification more broadly but in the interim NVDA continues to look remarkably cheap and the upside EPS case continues to widen.*

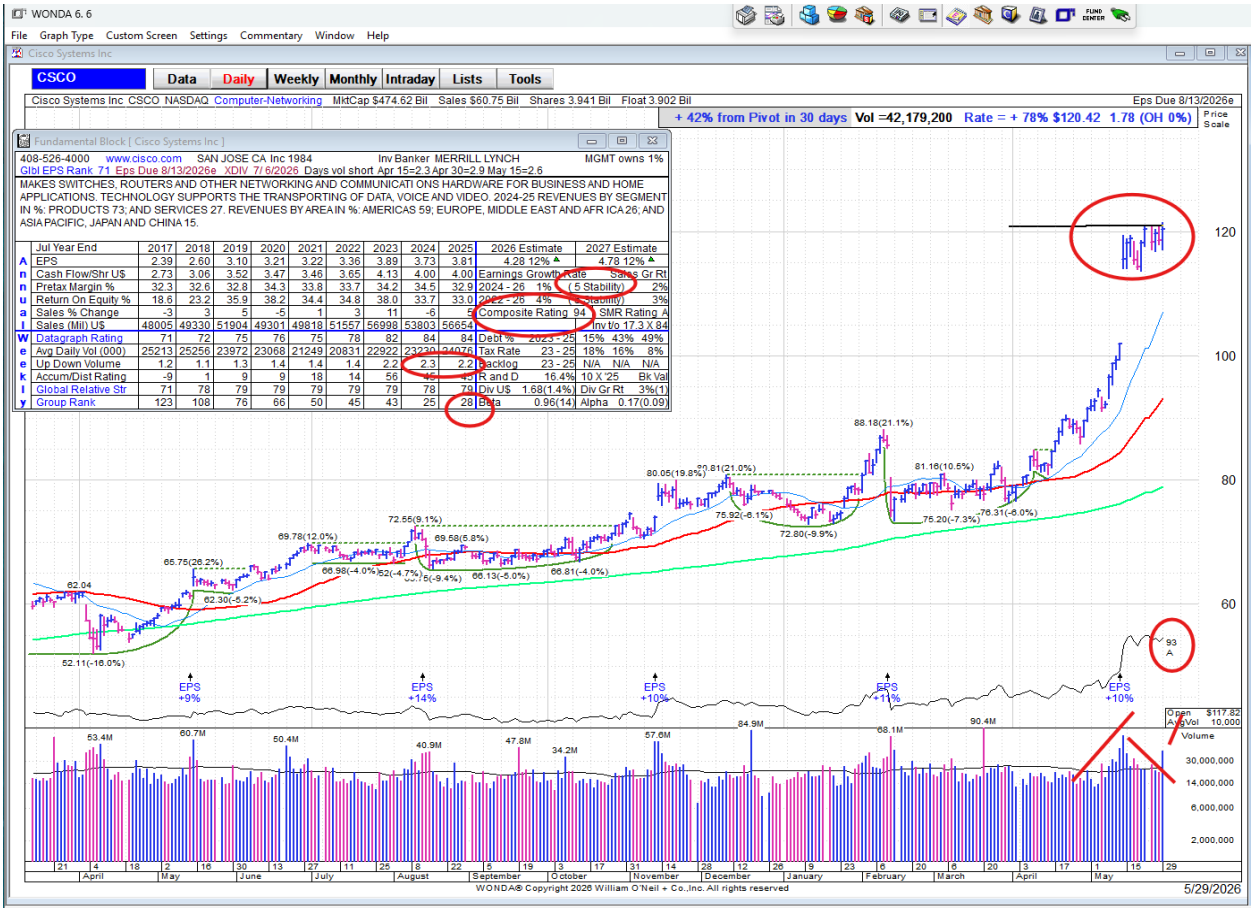




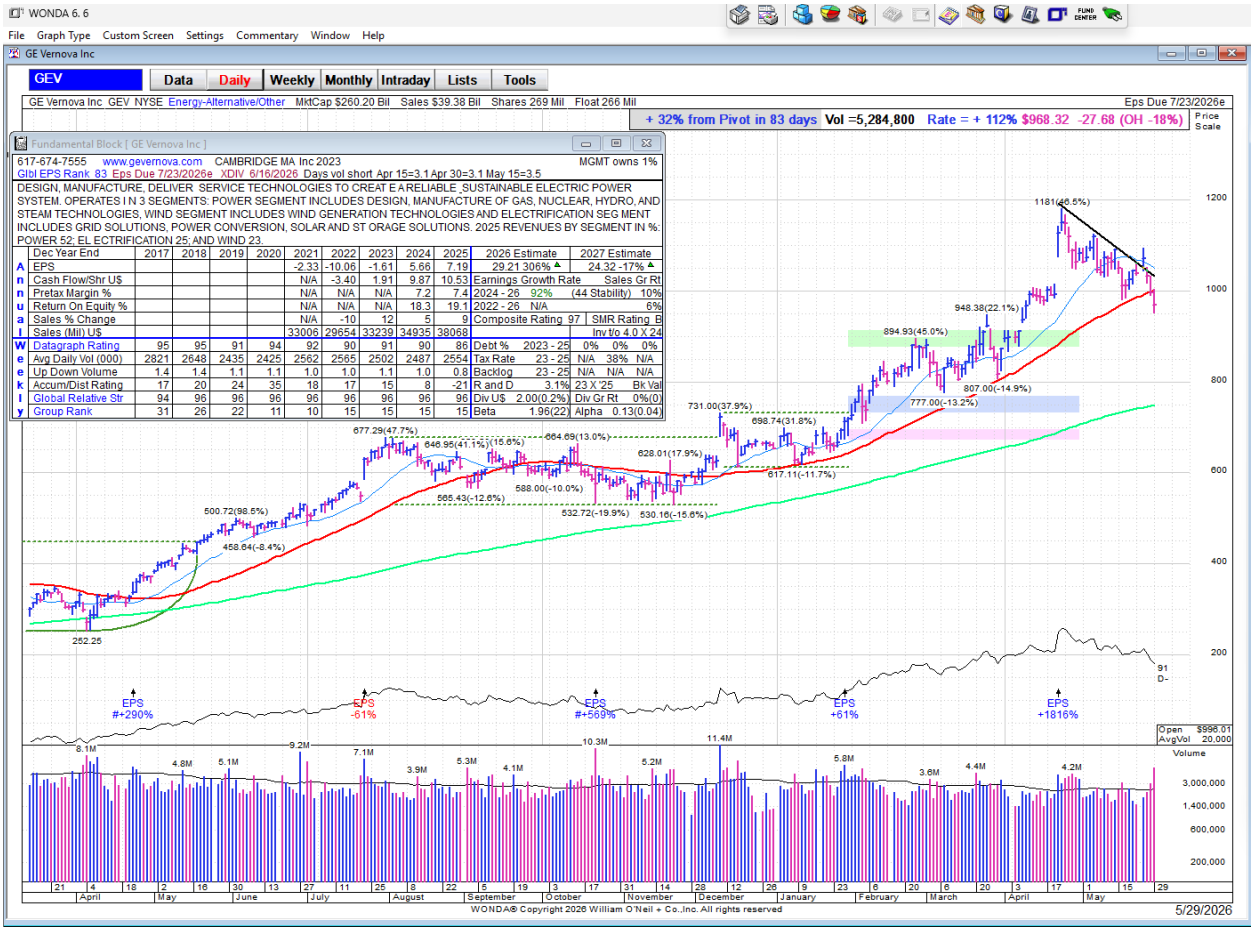
AVGO: Finally broke out, but it was helped by Friday's rebalancing.



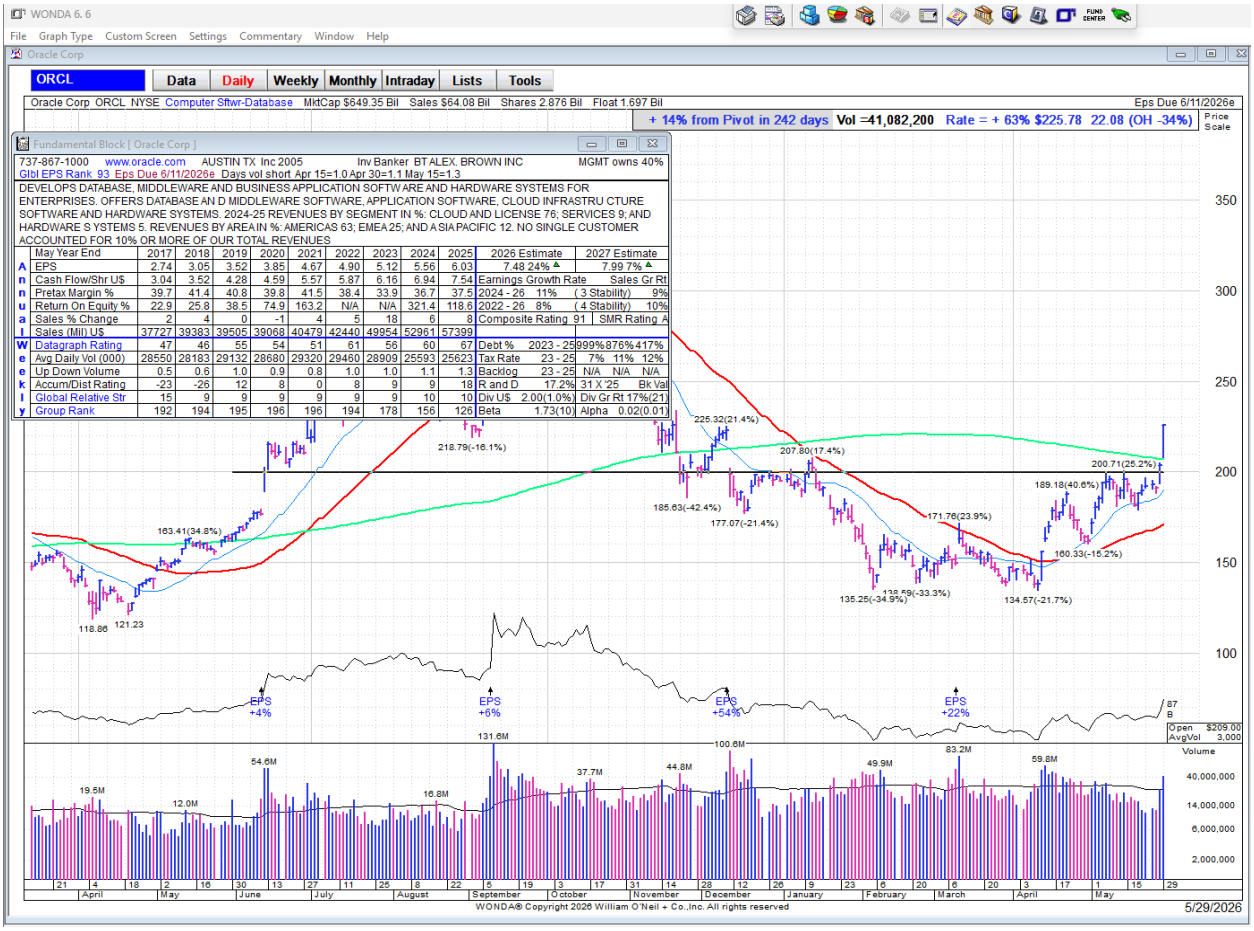
Russell 2000: New highs scream breadth expansion.



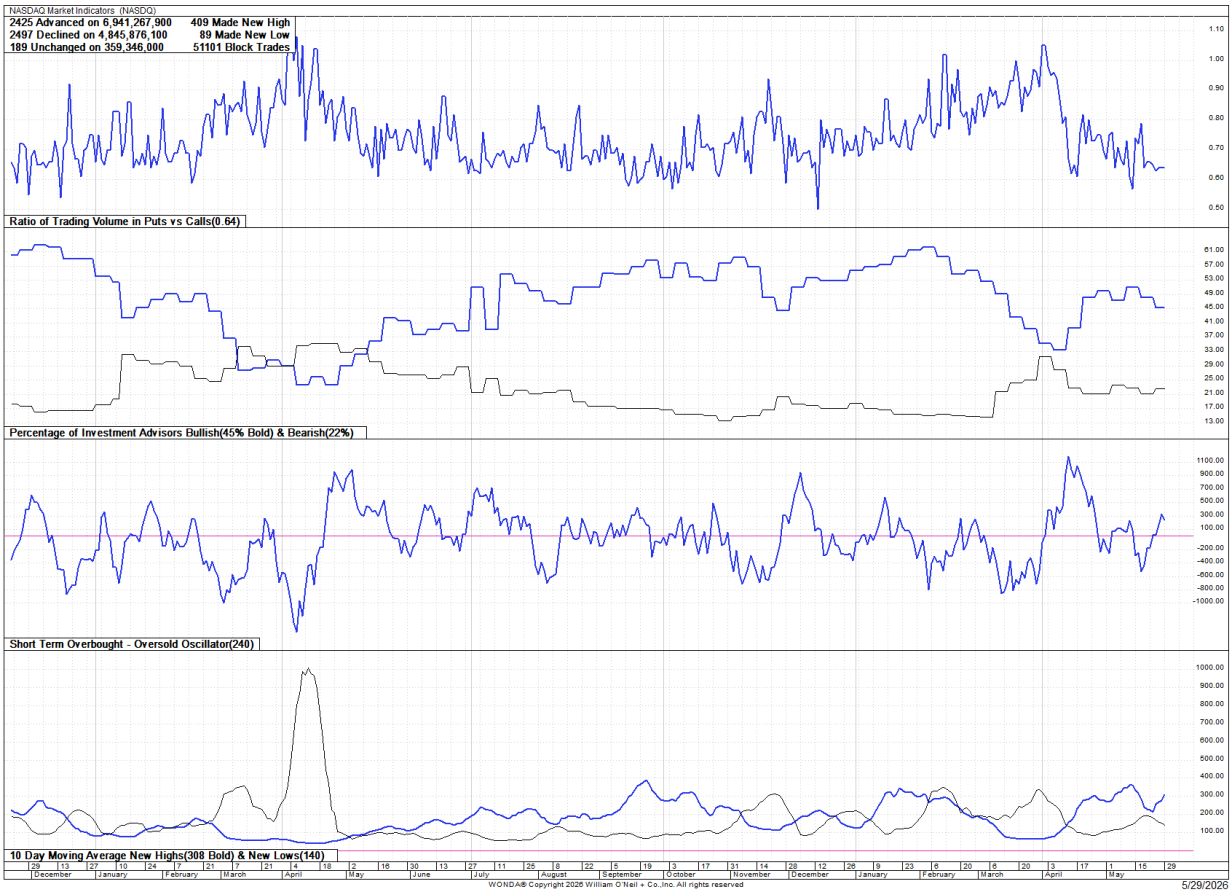
CSCO: To see a mega-cap gap higher and go dead-tight signals a very strong market and networking group expanding breadth.



GEV is one of the few important names to break below the 50DSMA on rebalancing-induced high volume. -18% off the highs, is not a felony, but a minor trim is reasonable. This is an Important situation to watch, as are the optics names for early signals of an emerging broader digestion. GEV could also become a build-positions situation *if* it gets back over the 50DSMA.

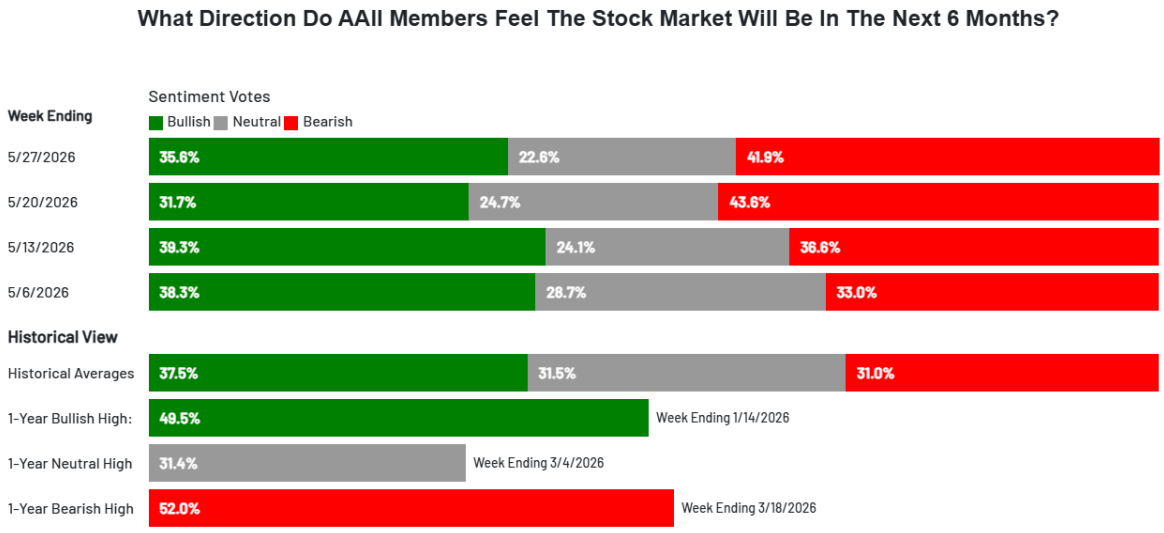


ORCL's recovery tells me the AI private credit bogeyman has abated. Think about all the gains you would have missed if you keyed on this one very negative chart when it imploded, while the general market and TMLs soared. Don't let IP, GEV, LITE or Fujikura scare you out without more corroborating proof. The 21DSMA breaking below the 50DSMA would be relevant proof.



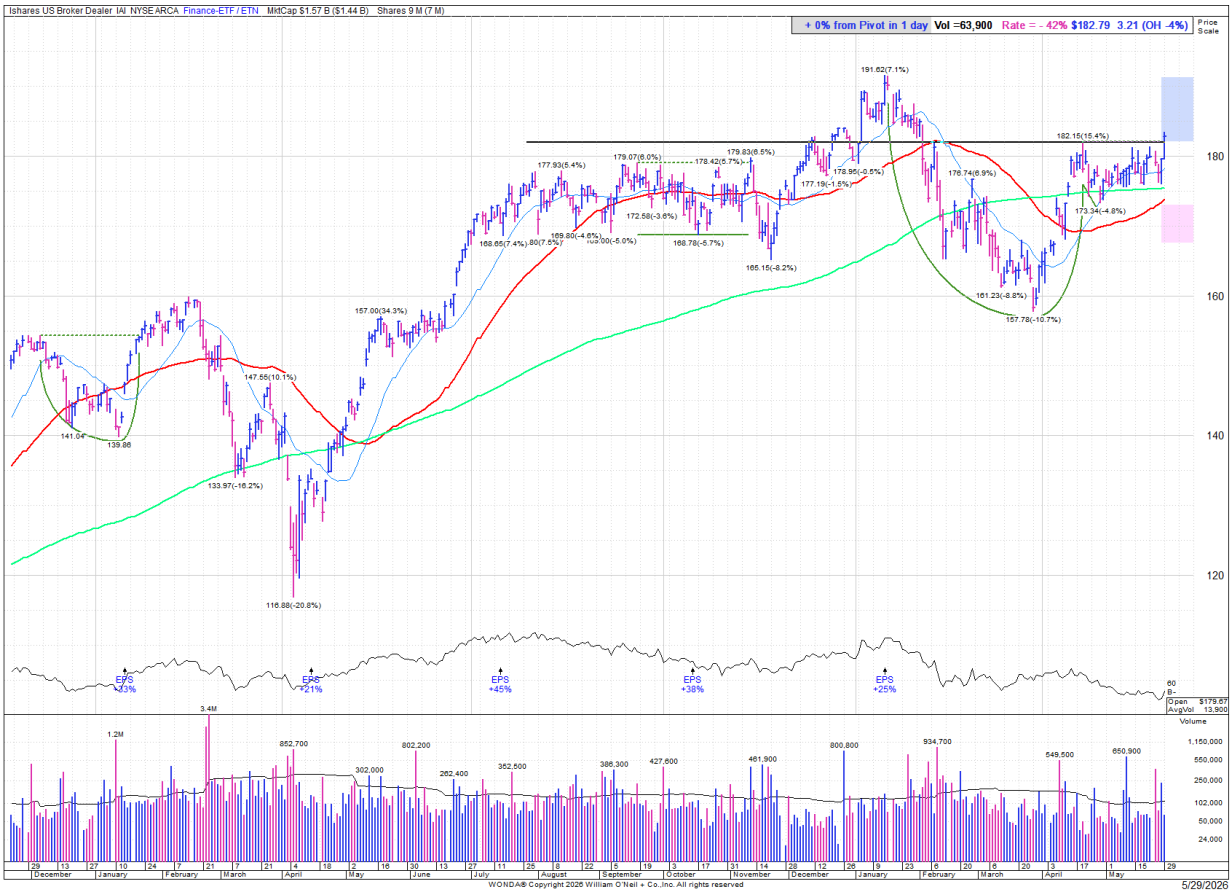
Market Indicators: Net new highs have been recovering as breadth has improved. Aside from that, there isn't much signal in these indicators right now.

VIX has definitively broken below the lows of the Darvas box and $18.00. Conditions have improved significantly.



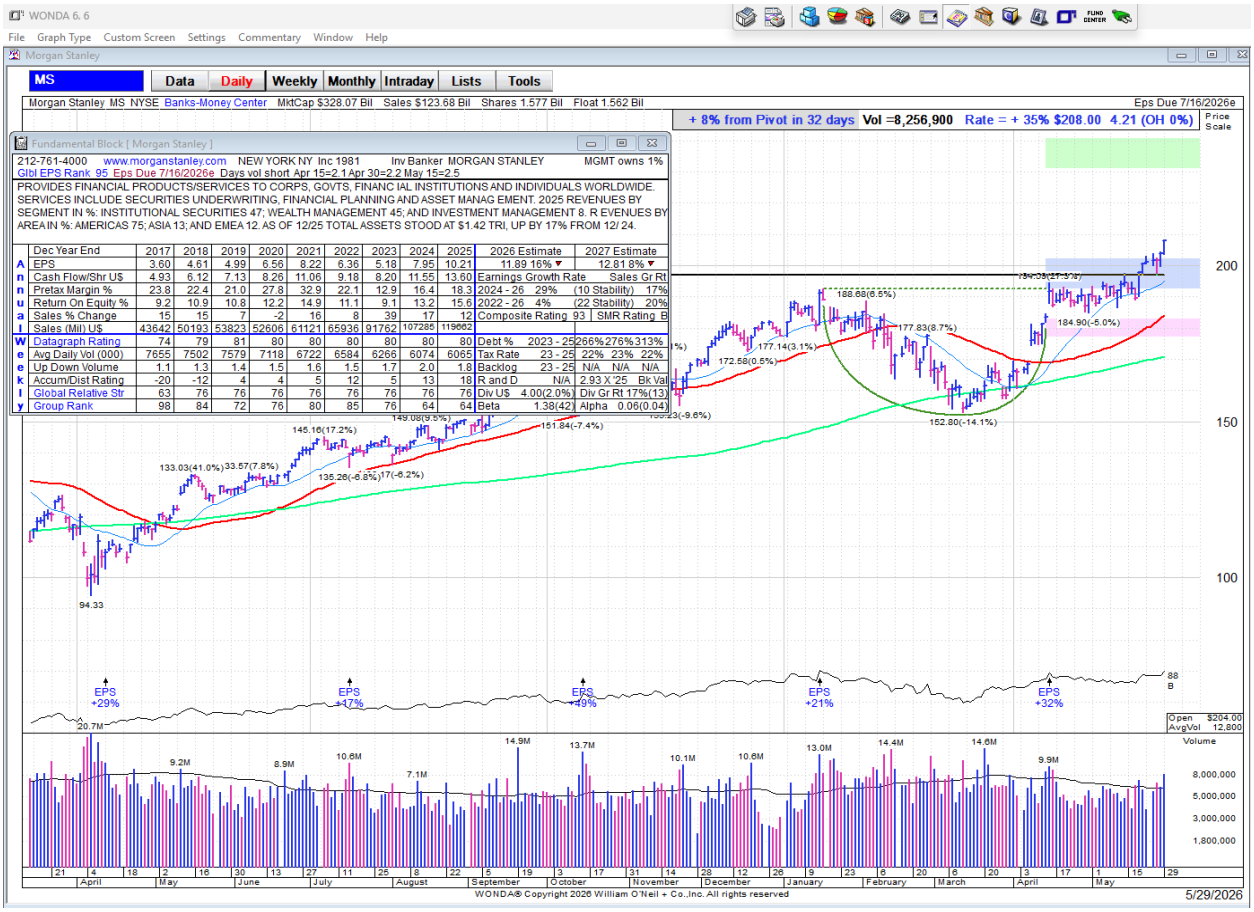
The public and most institutions have not participated in the AI bonanza but are feeling the squeeze of inflation and fear AI taking their jobs. The market usually tops after many months of consistently more bulls than bears.

Crude is in a short-term downtrend but has not yet broken down.

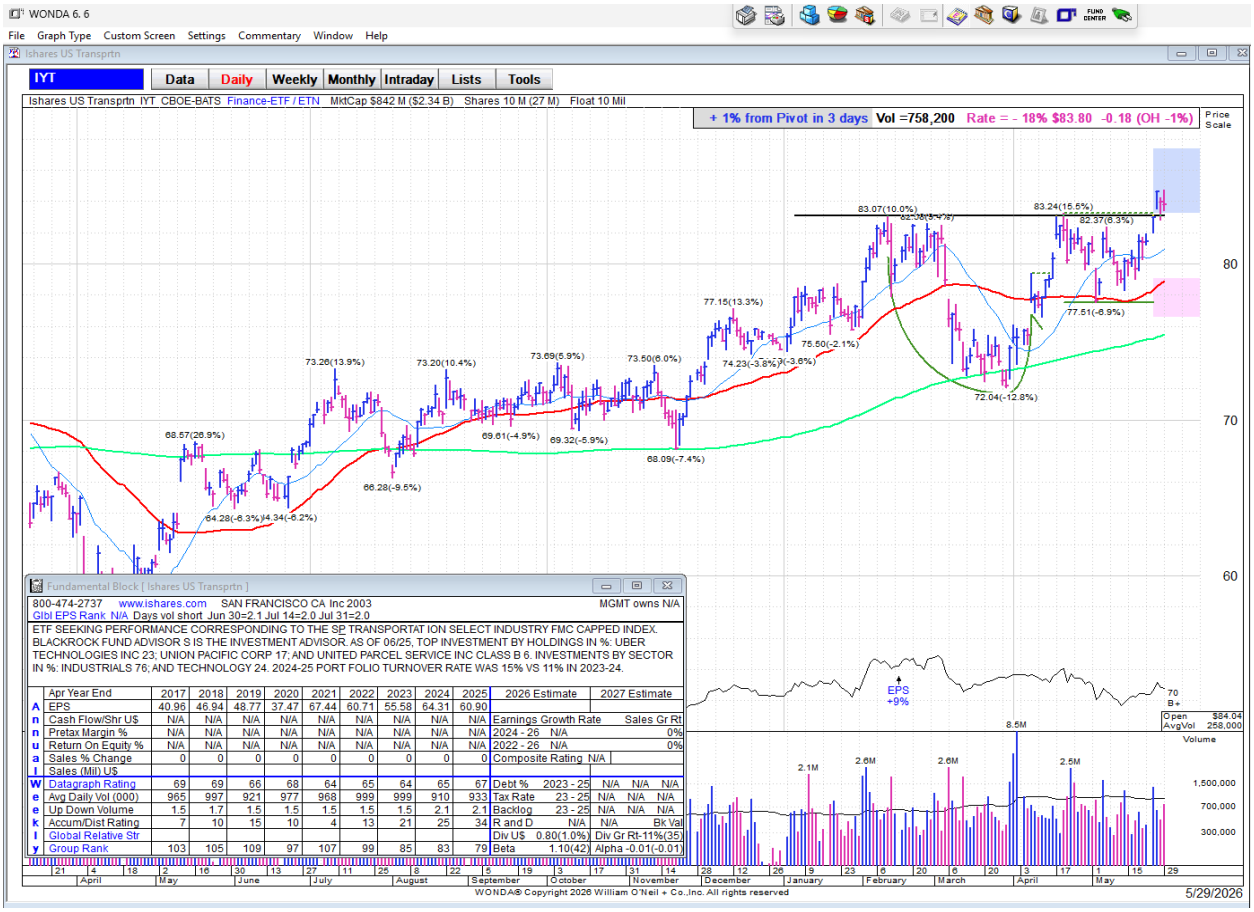


IAI breakout is super bullish and a signal that this wave is early and that breath is expanding.

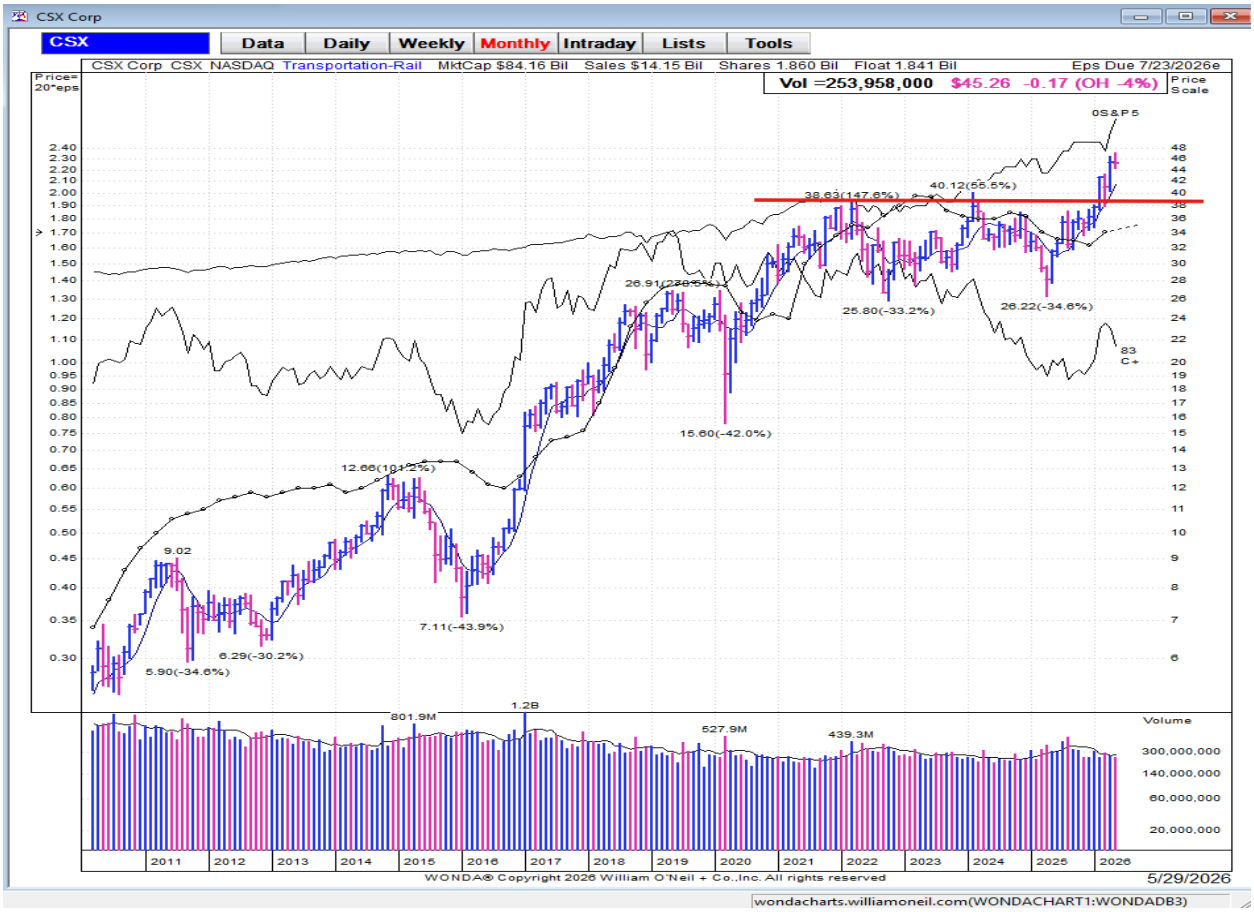
Brokers, Asset Mgrs & Exchanges – Asset Managers: Prefer Track-record Over Turnaround - *Large AMCs' premium (40x FY27 EPS) vs smaller AMCs (21x) has expanded YTD. However, we continue to prefer large AMCs (ICICI/HDFC) considering limited number of schemes from smaller AMCs are in Top/Upper-Mid performance tiers, greater bargaining power with distributors, higher profitability, and diversification opportunities. Investors looking for SMID AMC plays may consider KFIN, with a 2 yr horizon, as CMP builds little value for Int'l business.*



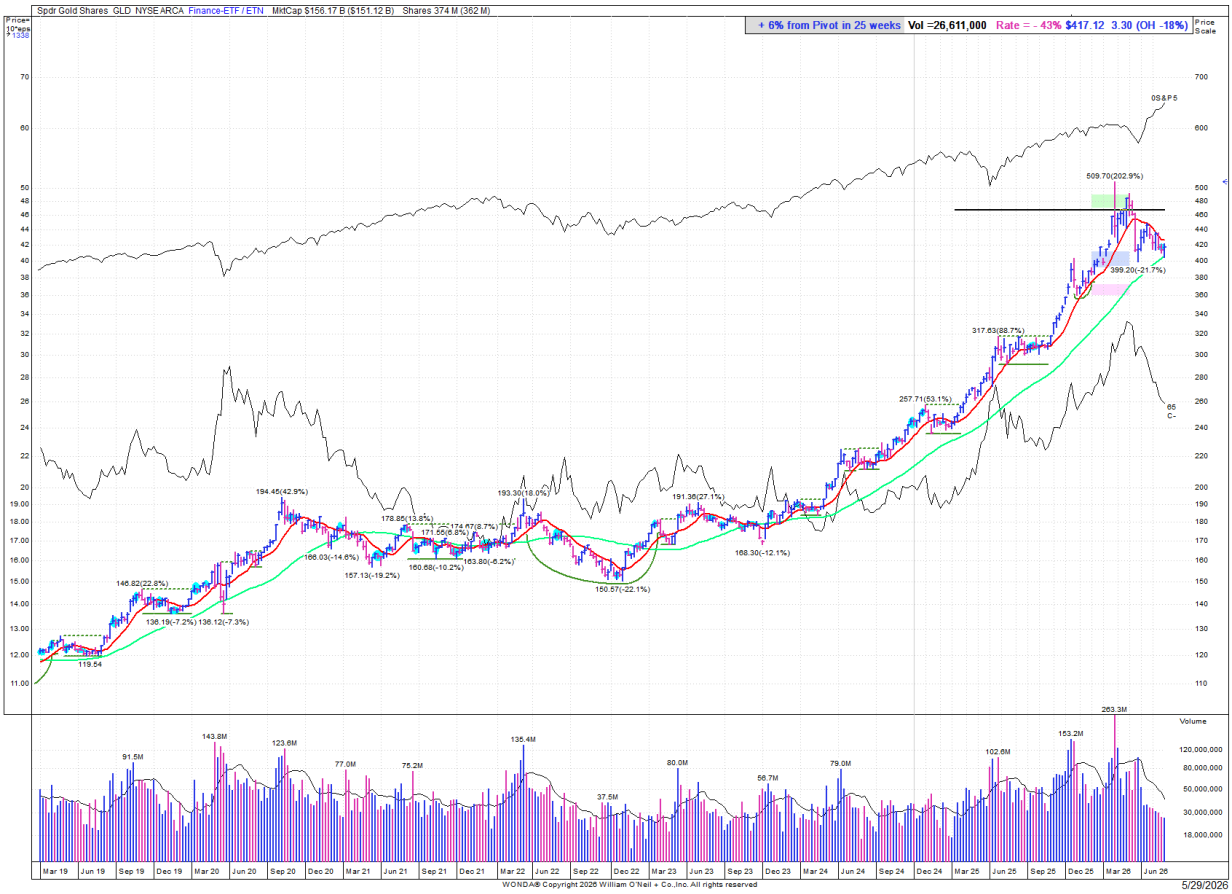
MS's breakout is a strong bullish signal — this wave is in its early innings, and breadth is expanding."



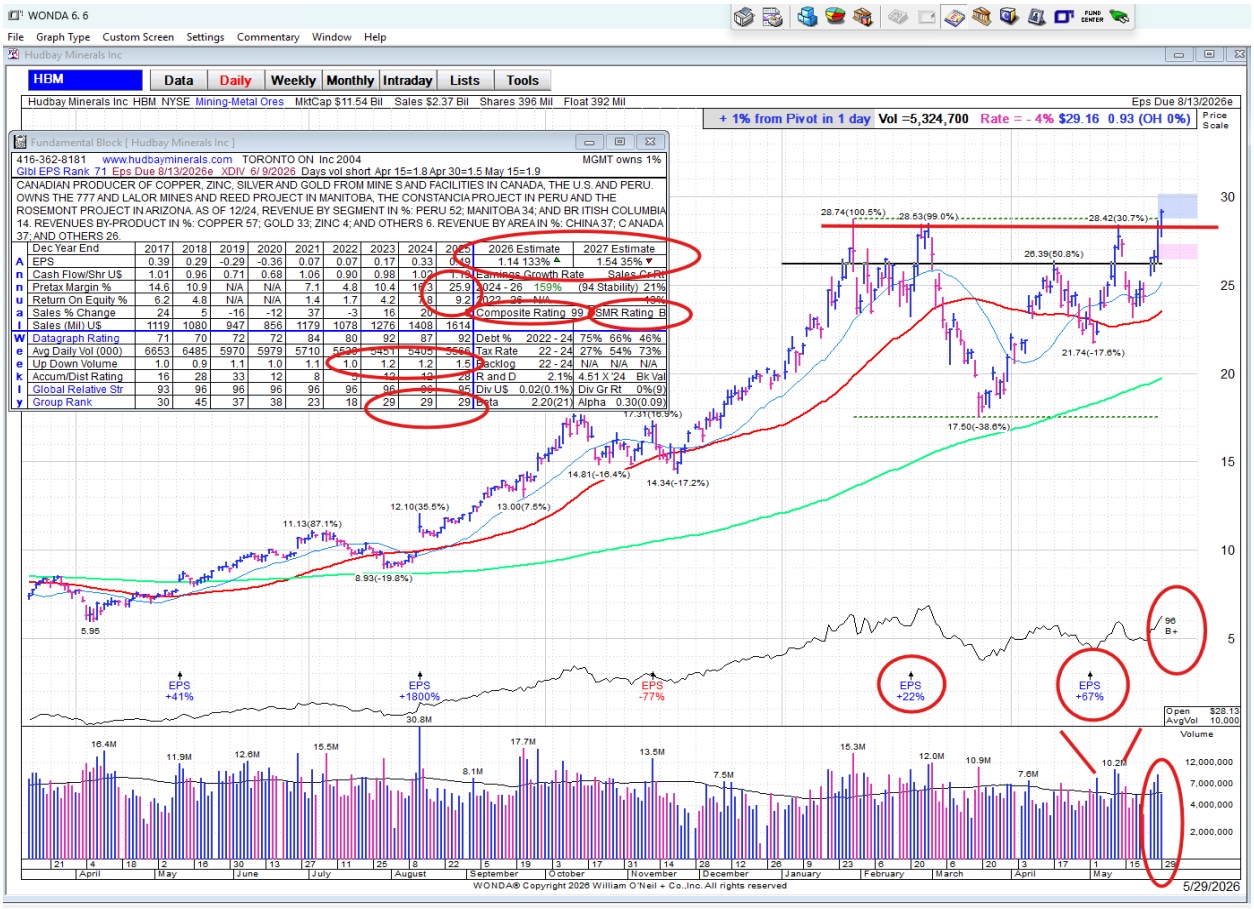
ITY: Transports across the board are healthy.



CSX has broken out over a four-year base. Freight loadings are soaring. The US economy is a long way from a recession.

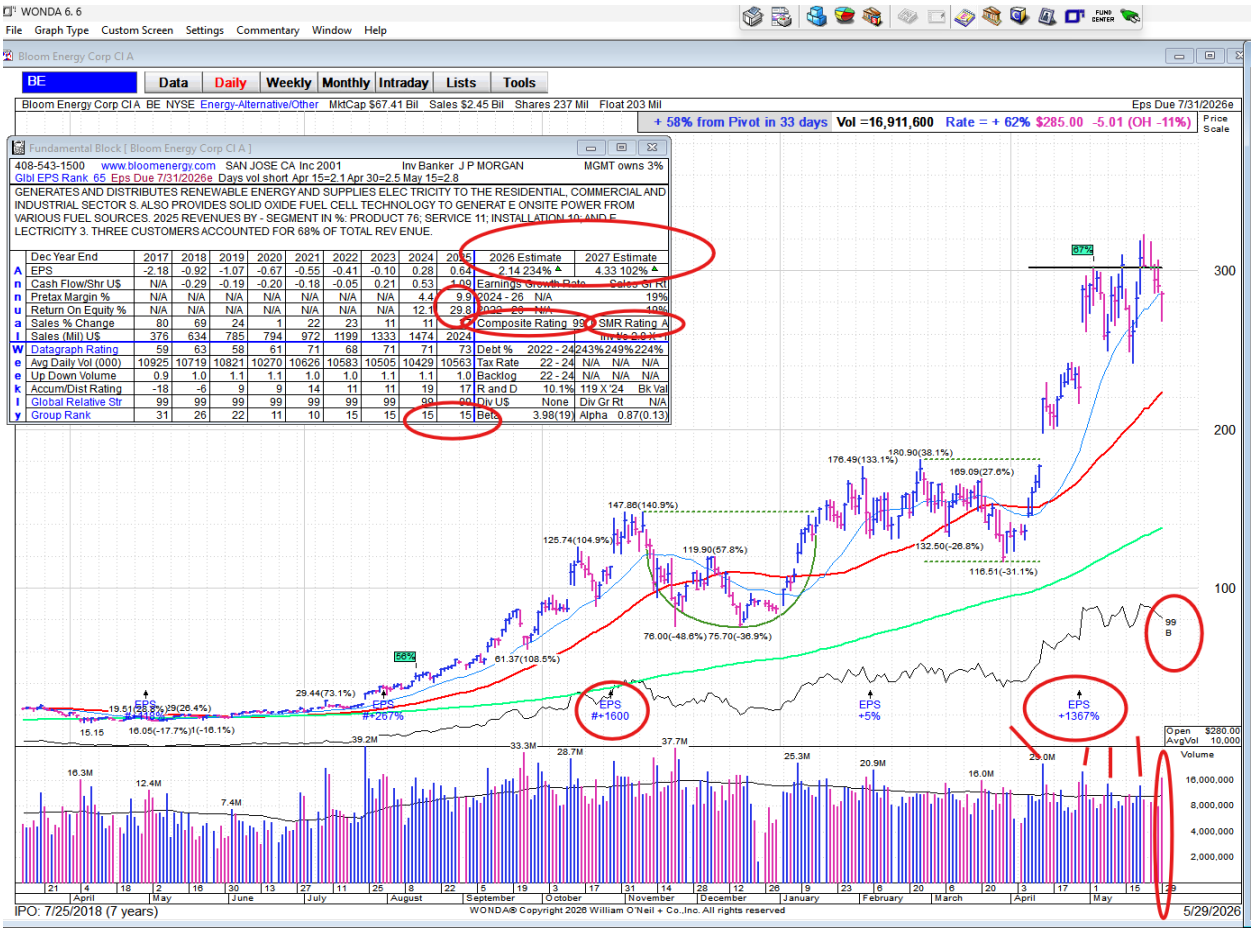


GLD: Support on the 200DSMA is precarious. The good news is that the volume on the last 8 week decline has been drying up.

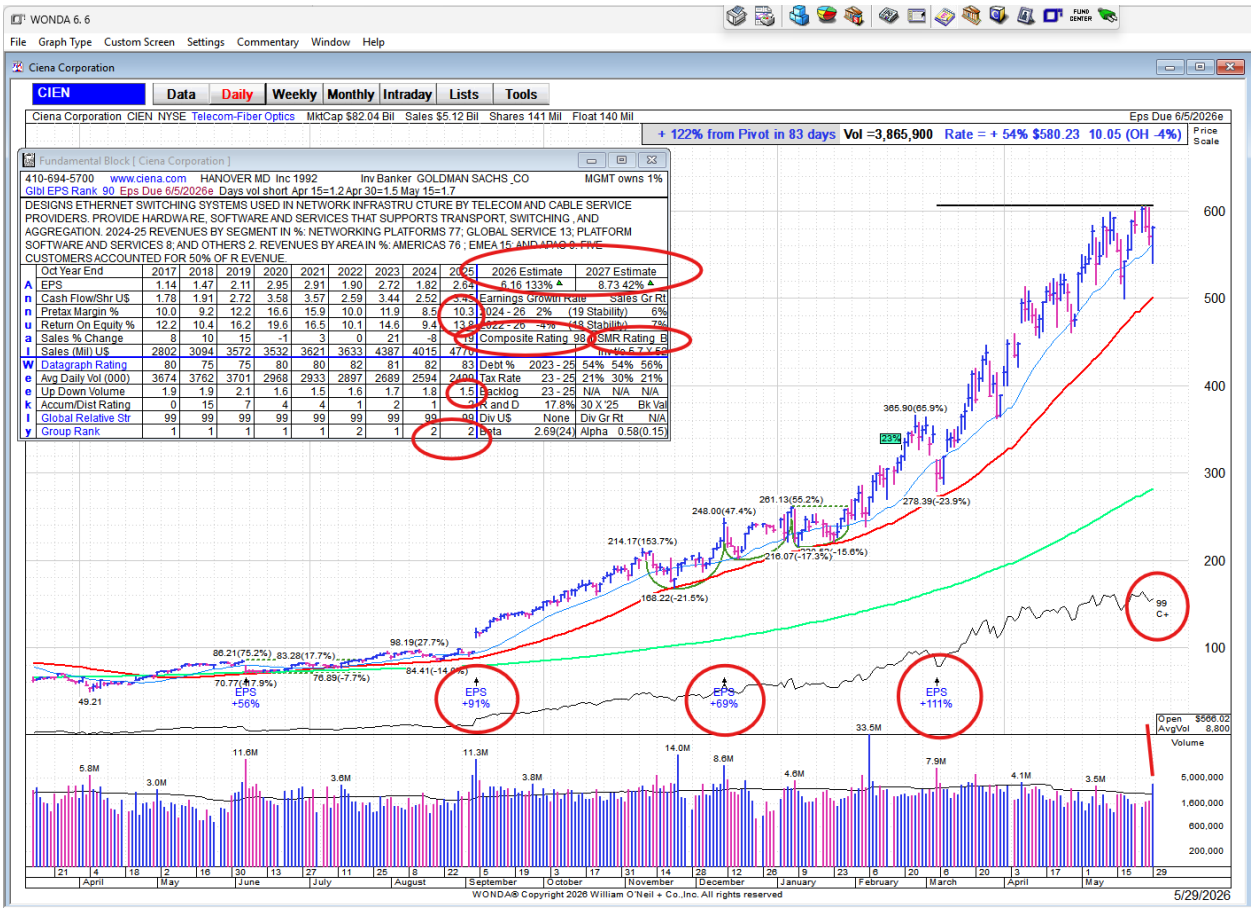


HBM: With GDX hanging on the 200DSMA by a thread, *if, if, if, if, if, if* GDX catches support and starts a move higher, HBM is likely going to soar as it's breaking out right here, flashing MASSIVE RS against the group. It's actionable right here, a few percent extended. An inverse Head & Shoulders = H&S is clearly identifiable.

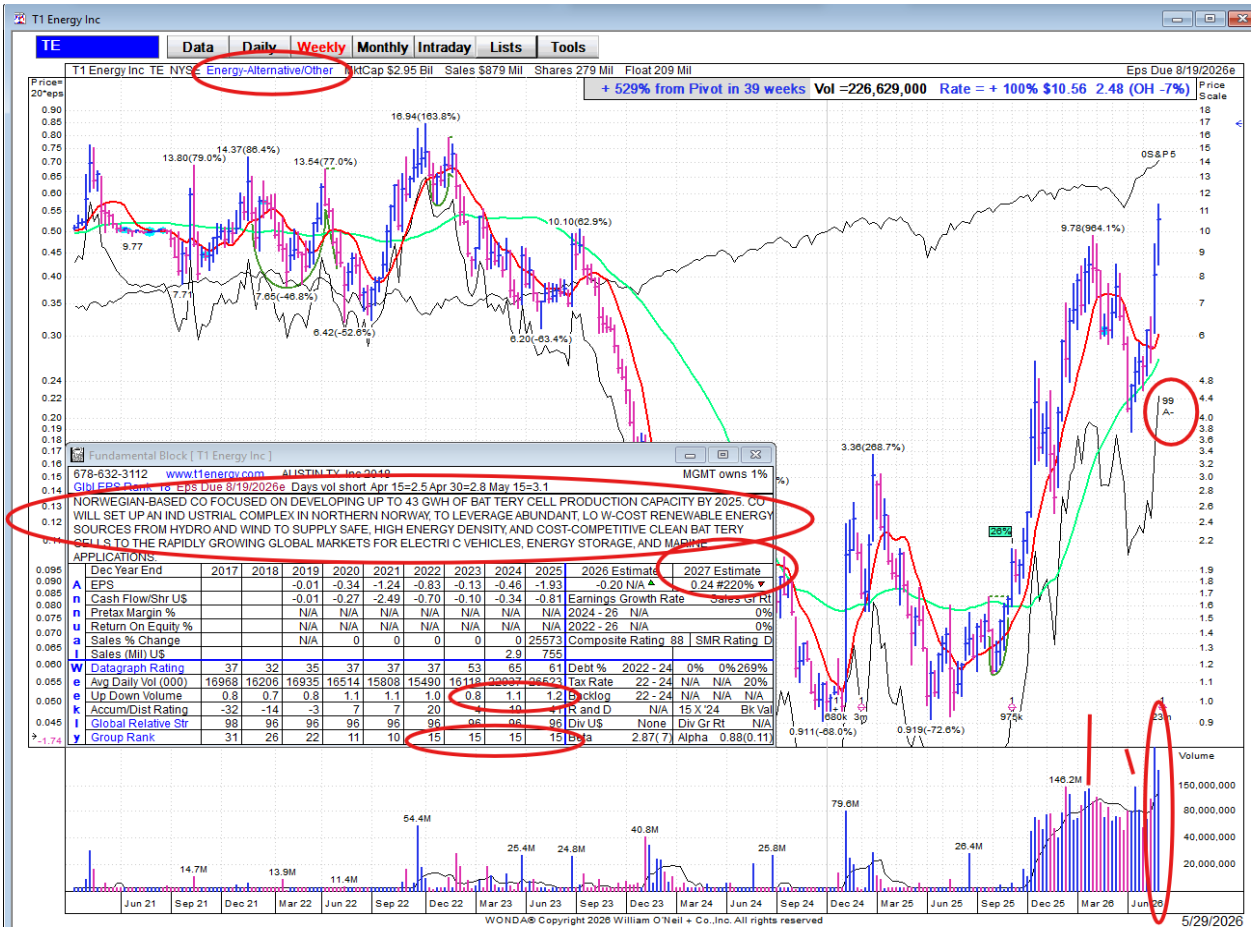
▼ Potential TMLs – Stocks of Interest



BE: I LOVE the fundamentals, but BE has gone back to its historic wide and loose daily swings. This clouds the picture and definitely makes it hard to hold. This is a perfect example of why I am moving to trimming down position size. Like LITE, I loved BE's Friday close at the top tick, but I am suspect and am likely to trim my position back. I am far more likely to start new positions between 10 and 15% max vs 18%.



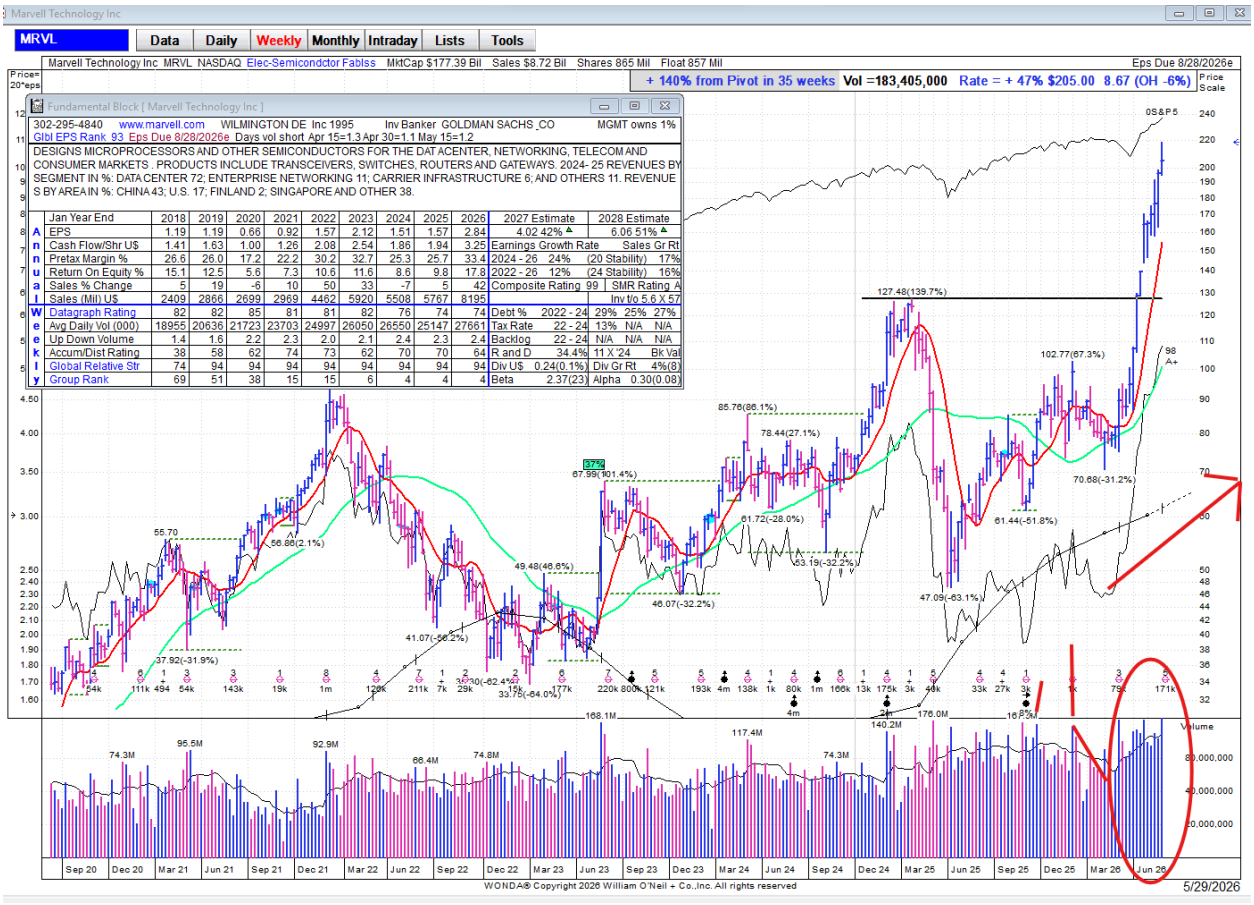
CIEN had a spectacular top-tick close last Friday amid a spike in volume. Earnings are due this Thursday. If, if, if it makes a new high post earnings, I will consider it an add, 5% to 15%, opportunity. I love that CIEN continued to power higher last March as the NASDAQ sold off -10%.



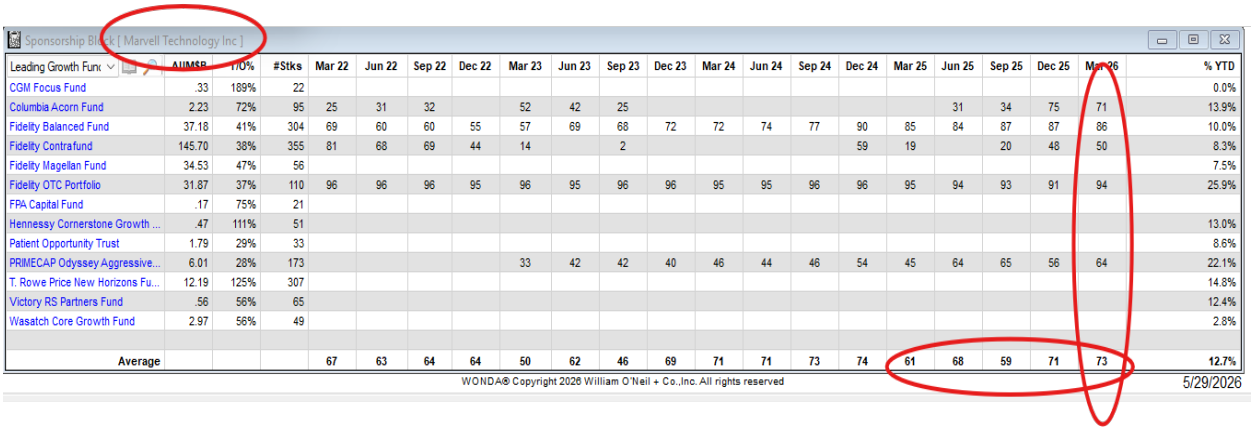
TE: Compute runs on energy — full stop — and tech CEOs are scouring the globe for every viable source they can find. Batteries have emerged as the next major theme, and TE is starting to wake up. Worth noting: this was a literal penny stock just last June, so this one's for the risk-tolerant. Technically, it's strong — 99 RS, A- Accumulation/Distribution — though it is a bit extended from its pivot at $9.95.

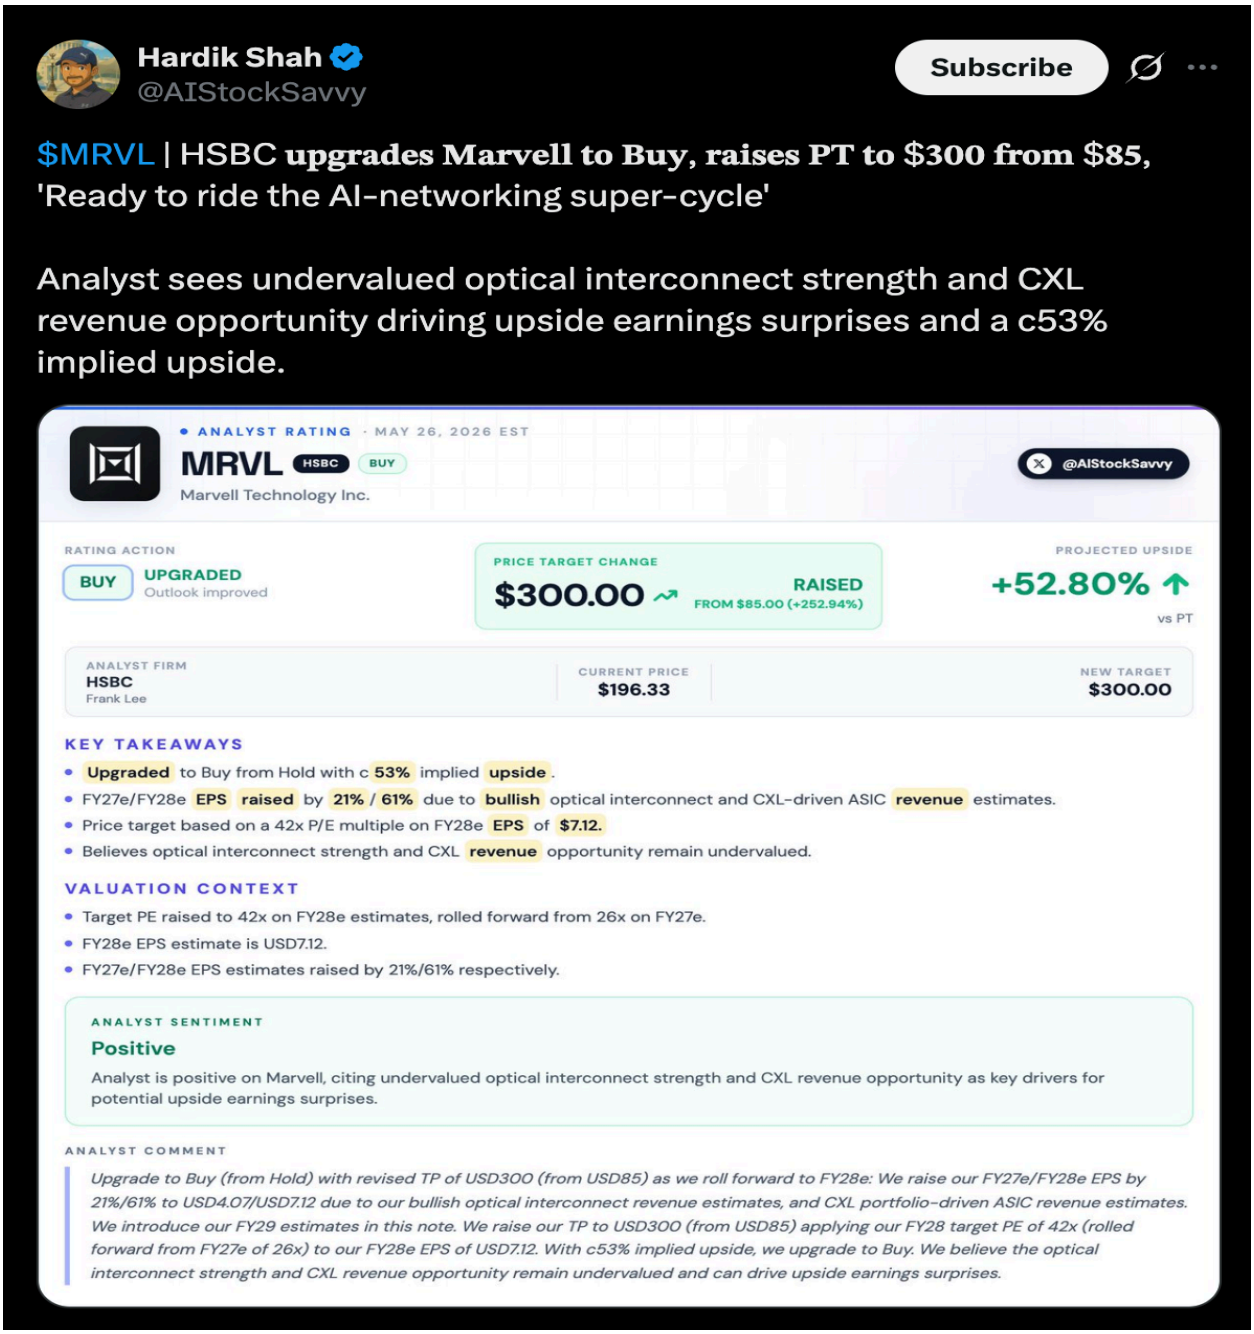
AMPX is also worth putting on your radar; the fundamentals there are genuinely impressive.

MRVL is difficult to post next to TE as MRVL is ELITE 99 Comp and an institutional darling. Post earnings, MRVL held its price after an initial dip. Note the U/D increased up to ****2.4** even as it digested. It's still a bit extended, but I intend to be patient and let MRVL age, hopefully like fine wine. We will see.**

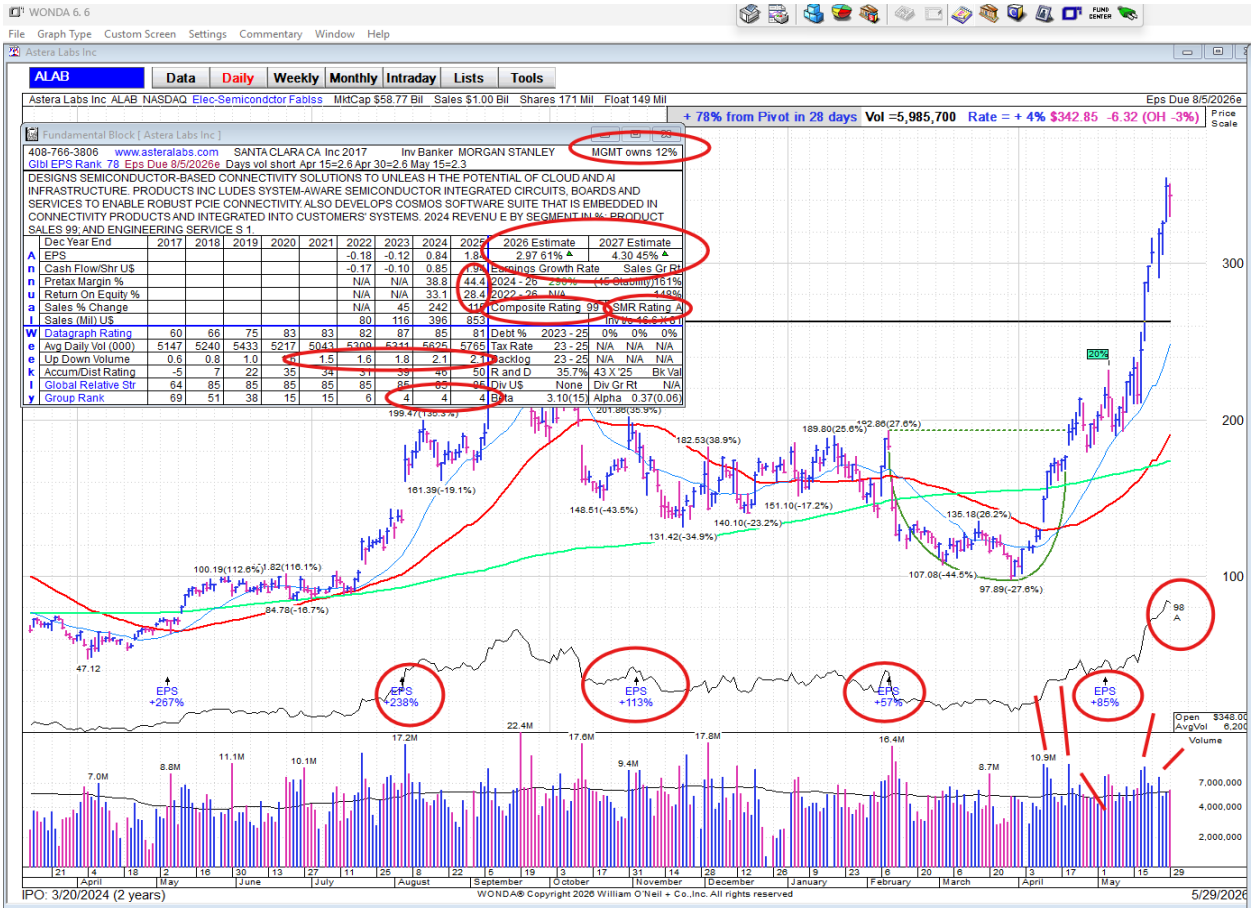


MRVL has spectacular WOBVA!!!!!!!!!!!!!!!!!!! Note the rising EPS line, one of Bill's favorite variables.



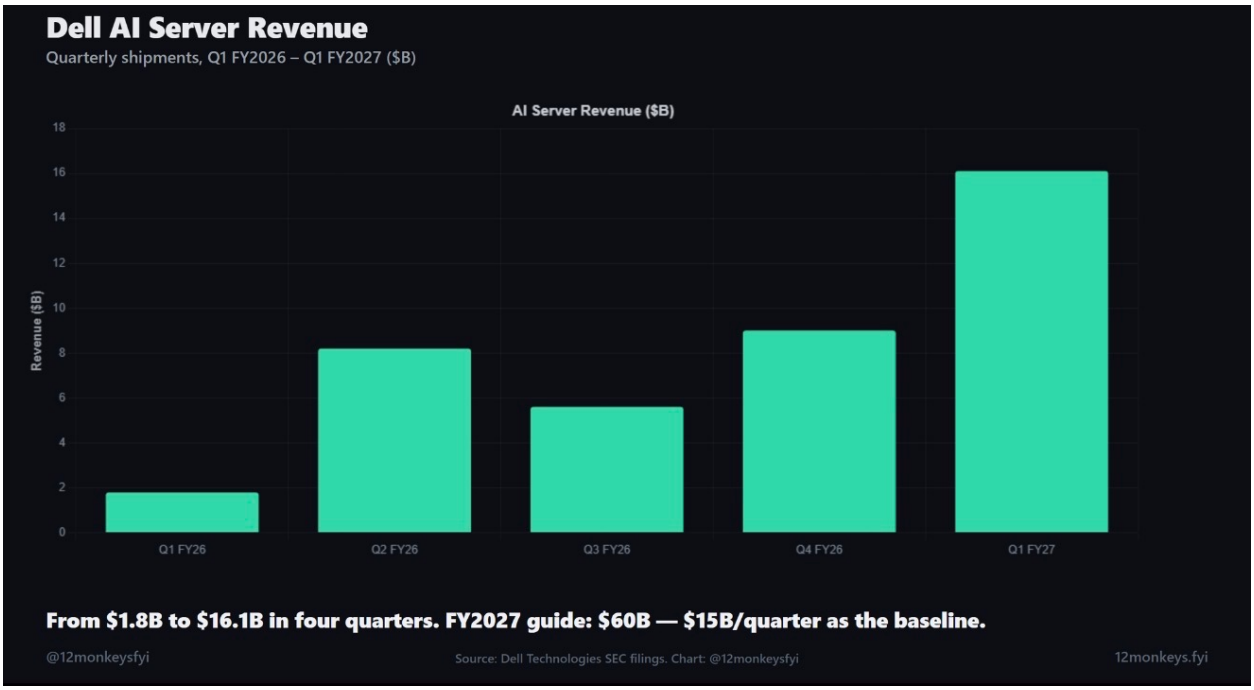


*HSBC upgraded **Marvell** (MRVL) to Buy from Hold with revised TP of USD300 (from USD85) as they roll forward to FY28e: They raise their FY27e/FY28e EPS by 21%/61% to USD4.07/USD7.12 due to their bullish optical interconnect revenue estimates, and CXL portfolio-driven ASIC revenue estimates. They introduce their FY29 estimates in this note. They raise their TP to USD300 (from USD85) applying their FY28 target PE of 42x (rolled forward from FY27e of 26x) to their FY28e EPS of USD7.12. With c53% implied upside, they upgrade to Buy. They believe the optical interconnect strength and CXL revenue opportunity remain undervalued and can drive upside earnings surprises.*

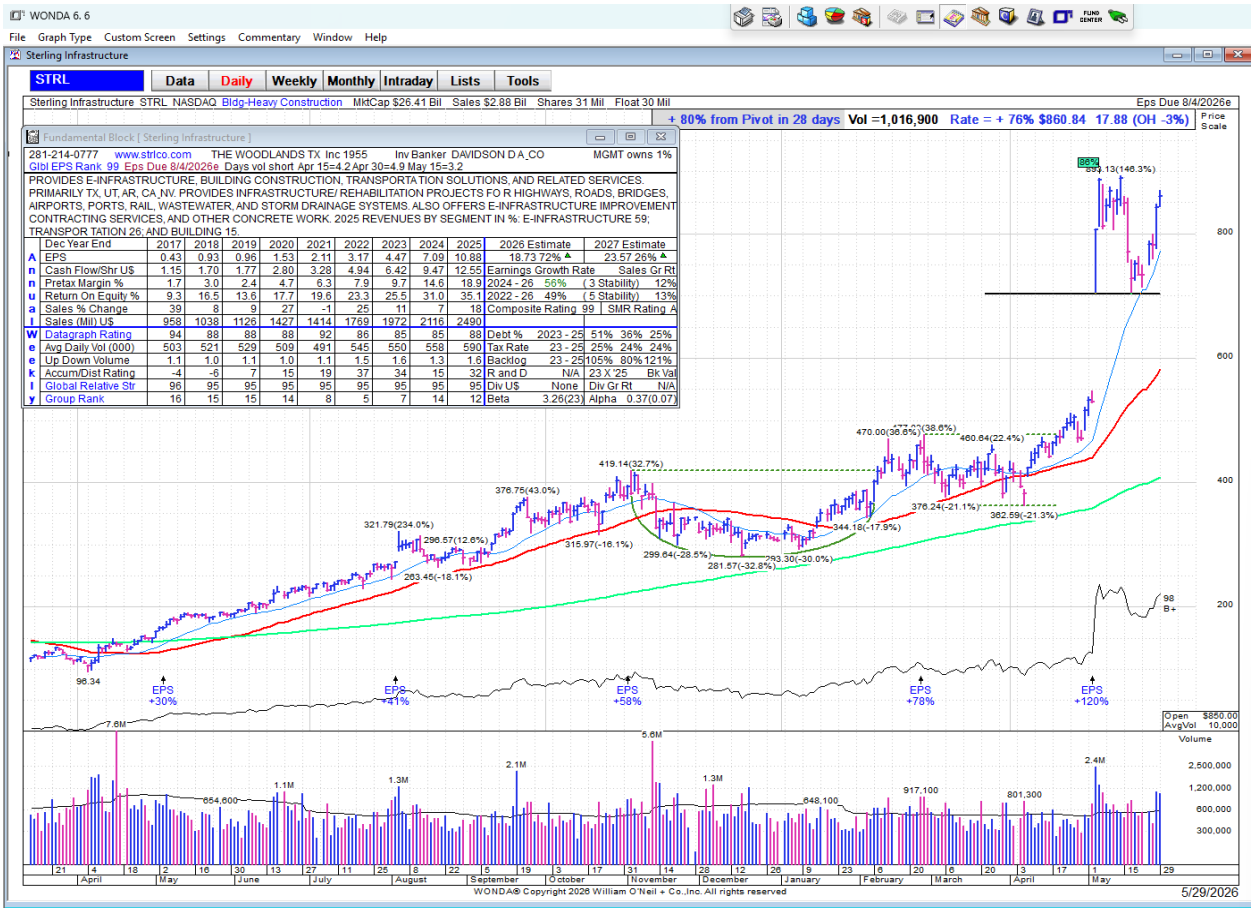


ALAB was difficult to get long, for most, you were stopped out and had to rebuy over $232.00, then got stopped out again, and then rebought over $240.00. If you have it, congratulations on your perseverance. The price action and fundamental metrics say that ALAB is one of the top 5 stocks in the whole market. It's now too extended; the timid have been left behind.

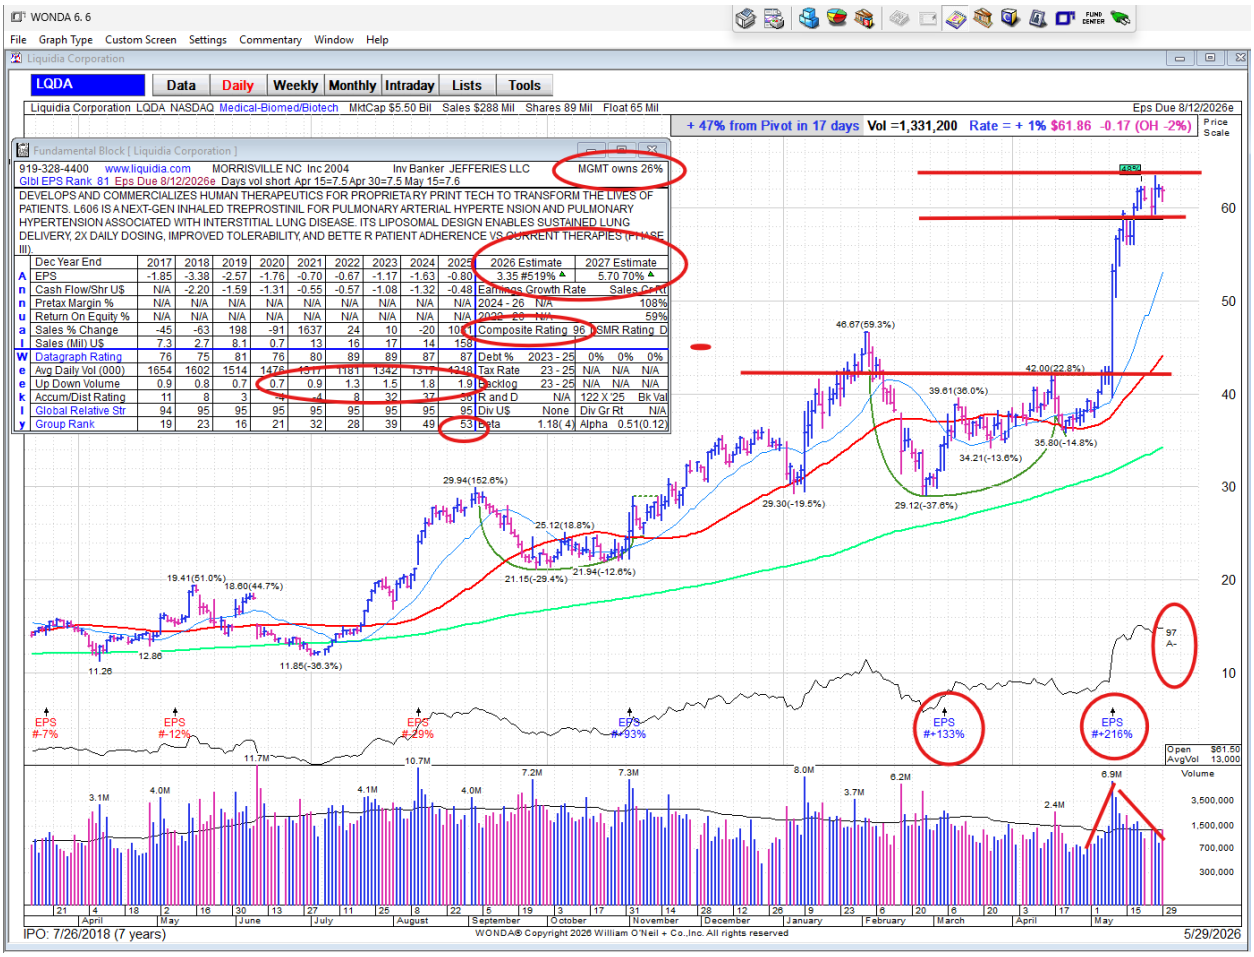
DELL is impossible to leave out of any discussion about last week's market. DELL proves that sometimes Monster winners can emerge without massive estimates or ROE and pre-tax margins. But price action can signal the market is sniffing the future before the big news, that beat and raise quarters are coming. DELL is now sporting a flagpole; let's see if any digestion produces a flag. Now a 99Comp, 98RS leader. SNOW and NTAP as well. New monsters continue to erupt every week. This is incredibly bullish.



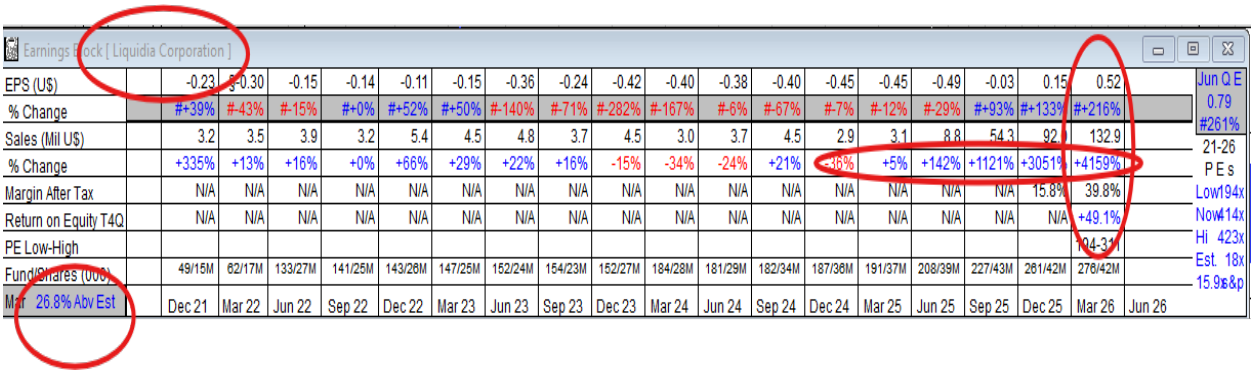
Staggering upward revisions.

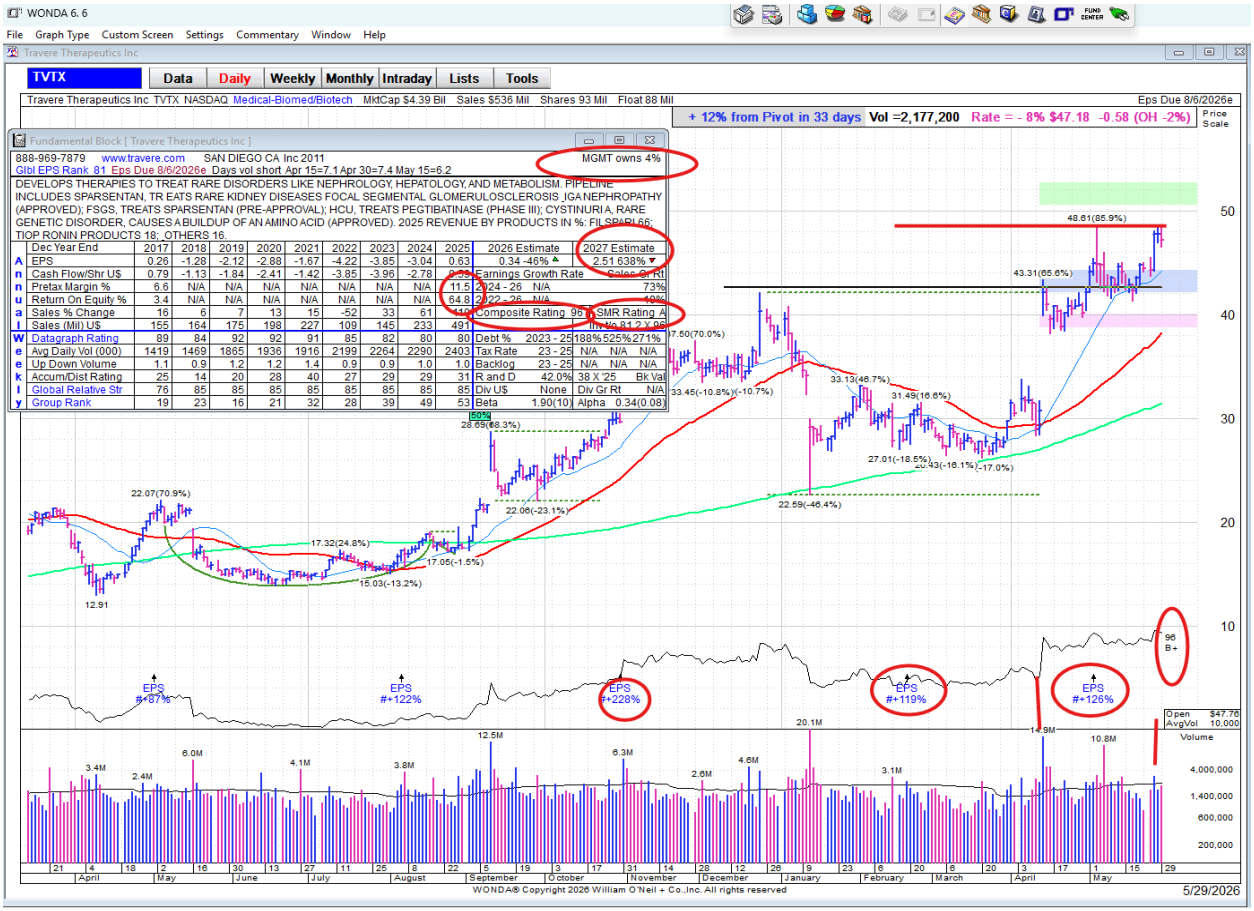


STRL: The market is so strong that when stocks get slammed lower, they seem to come charging back. This is not a reason to get sloppy and ignore sell signals.

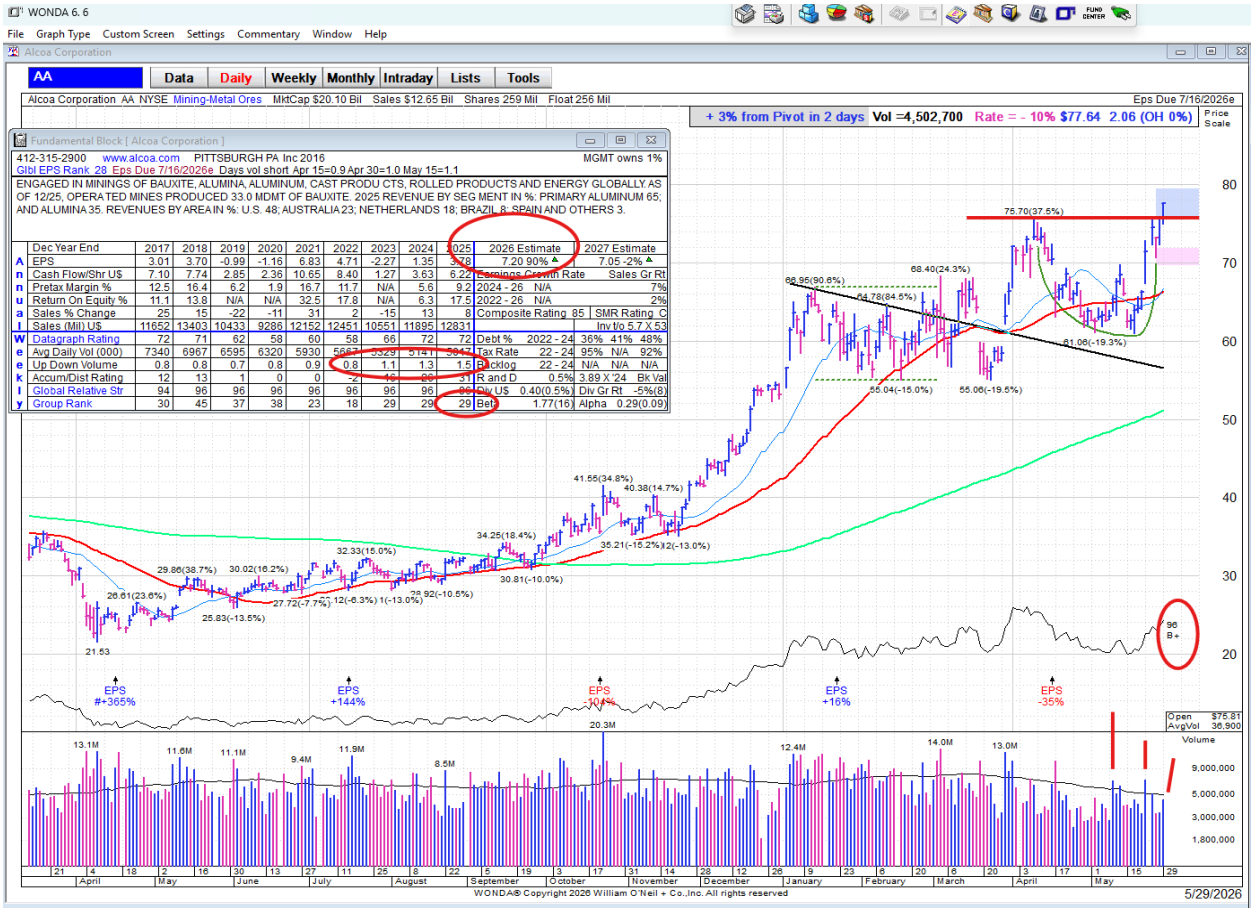


LQDA is kind of a flea, but earnings this powerful are rare. Looks like a flagpole and the start of a tight flag. Pivot into new highs.

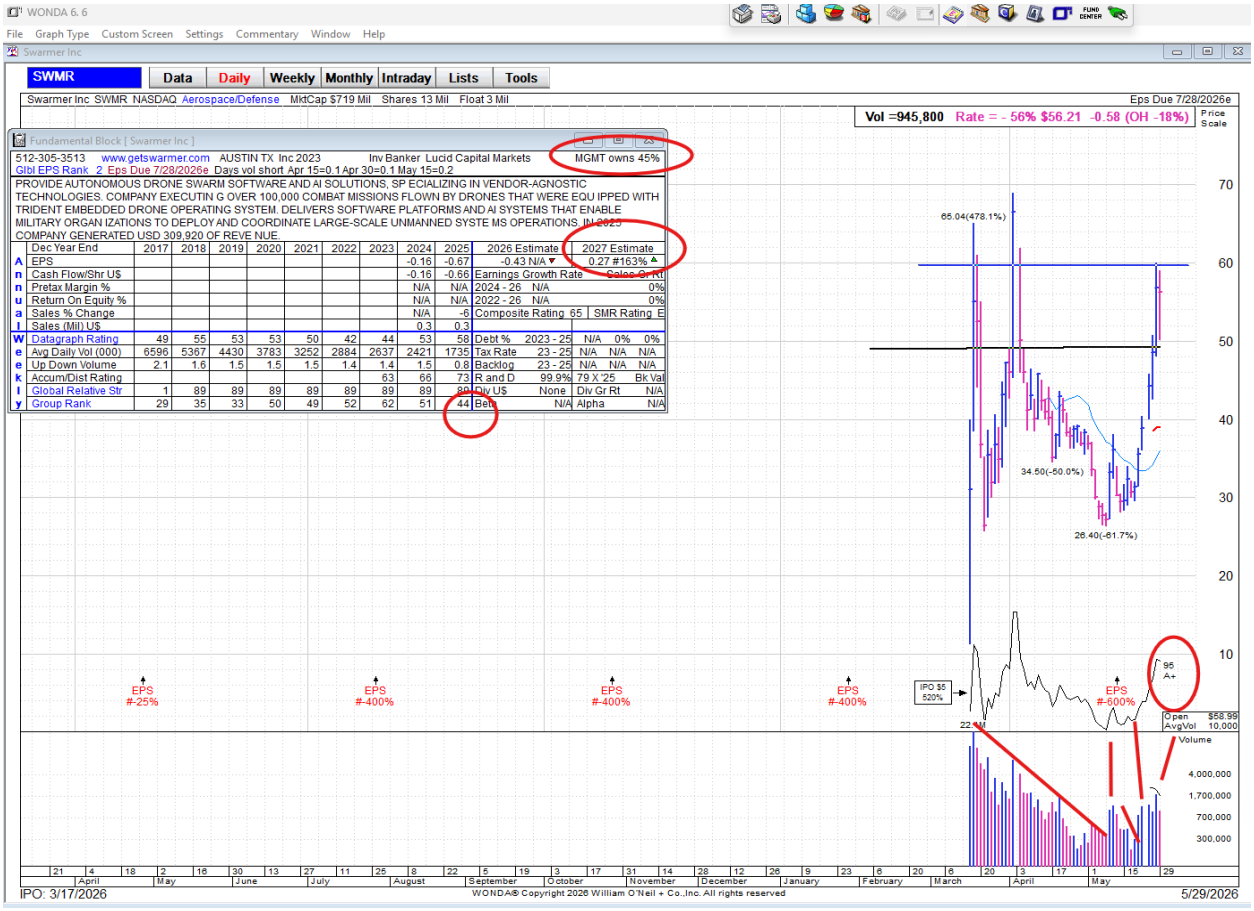




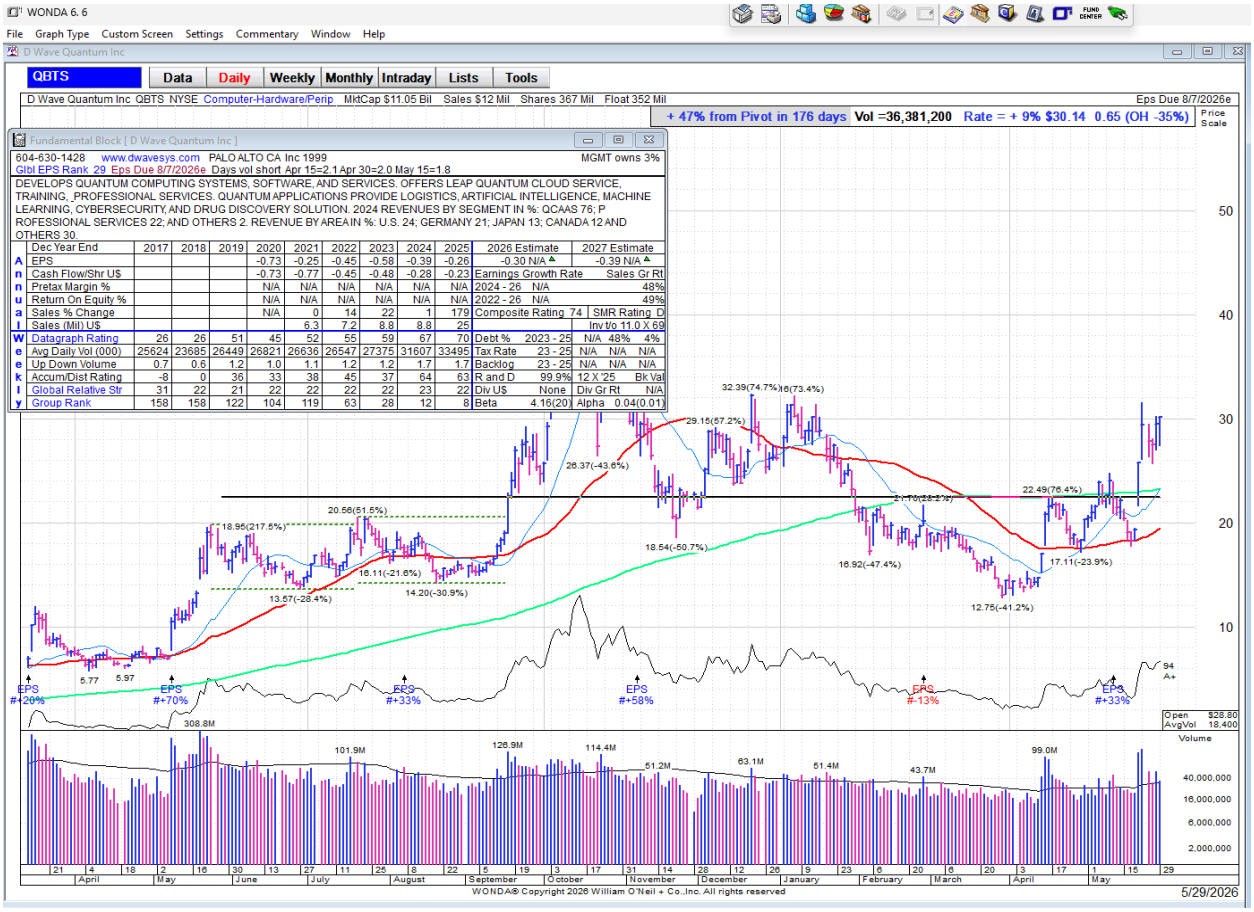
TVTX: +638% 2027 EPS estimate!!!!!!!!!!!!!!!!!!!! +64% ROE. It's a flea, but it has exceptional fundamental metrics. Pivot into new highs.



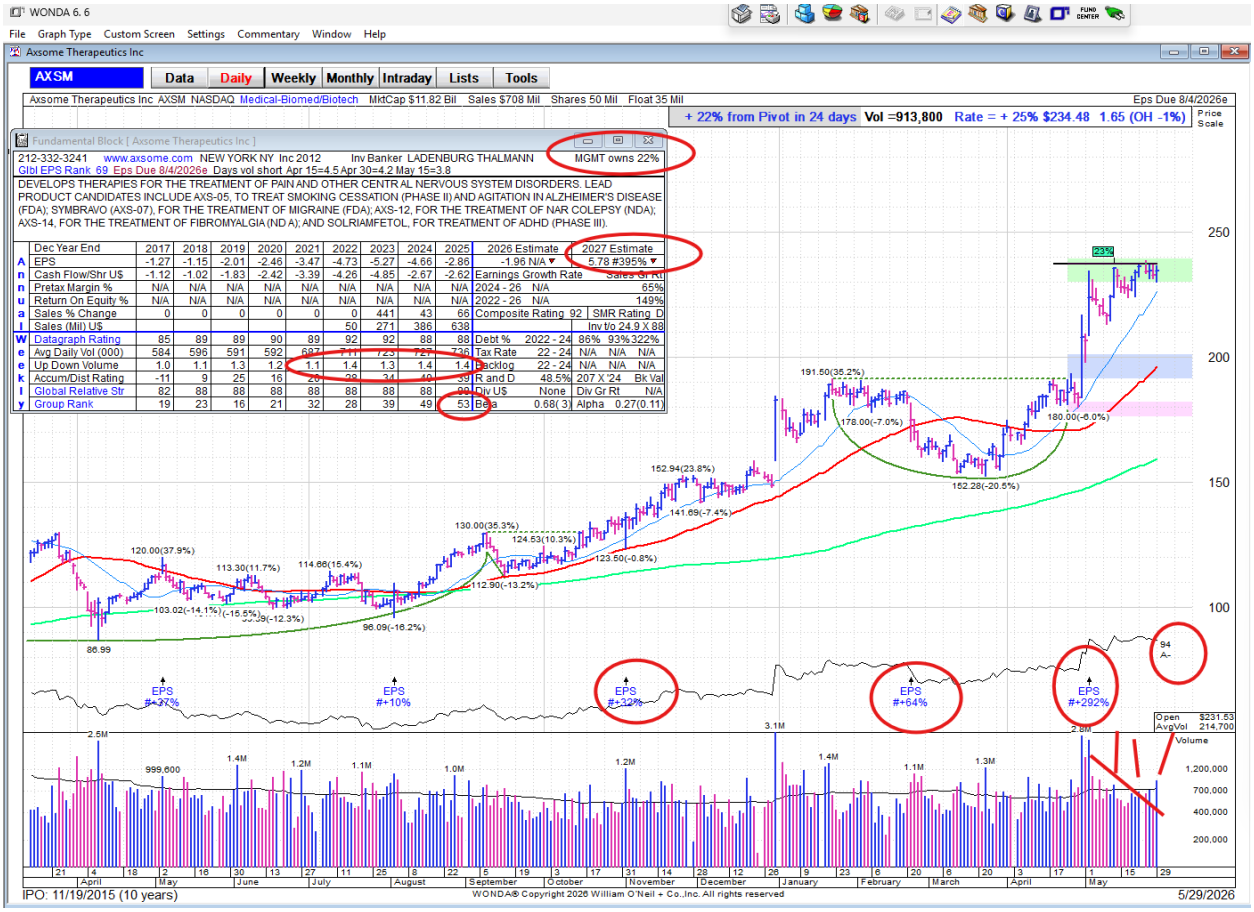
AA: If you want diversification out of electrical technology and high growth, AA looks like a base on base, possible cup without a handle. Pivot right here.



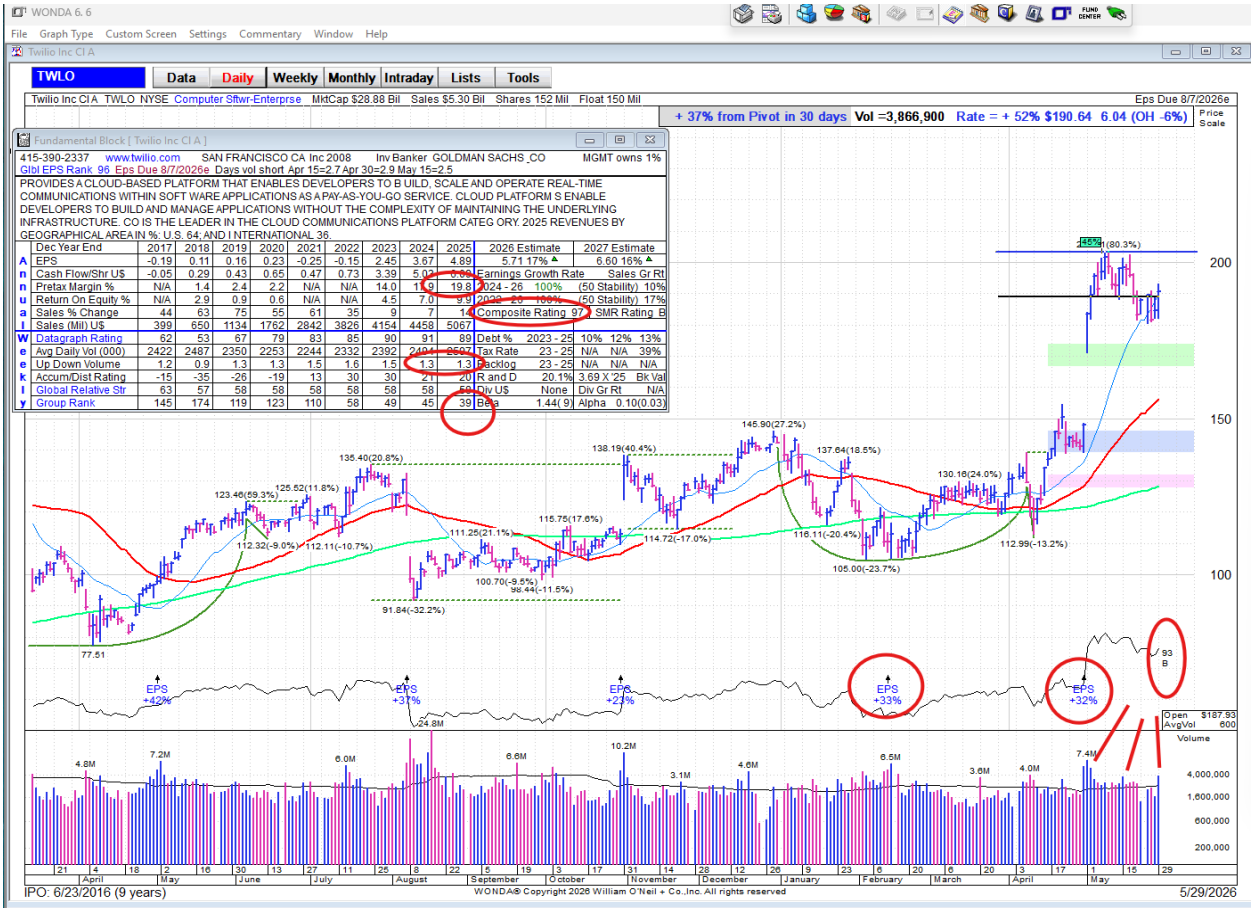
SWMR: I hate IPOs for the most part, as they are generally unprofitable, will never have earnings, are low-quality, and are not seasoned, with many growing pains ahead. BUT, but, but SWMR is in the scalding hot sector of drone defense. It has also recovered from its post-IPO excitement and sell-off. A pivot is likely around $60.00.



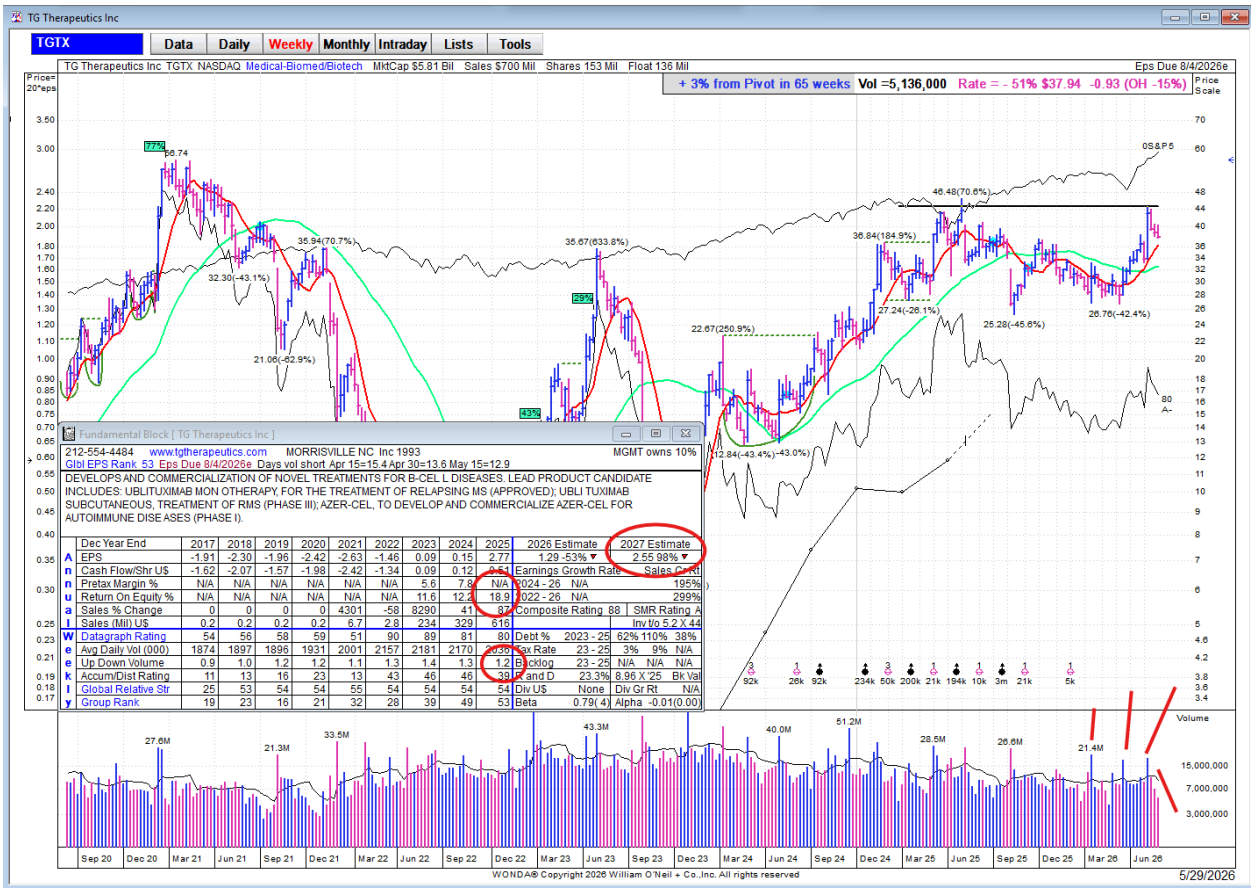
QBTS: I really dislike these names. I think they are the speculative junk of this rally; every rally has them. But the recent leg-up, 94RS and 1.7U/D, A= A/D, is digesting properly. Cowboys unite, pivot over $31.65. I will pass. RGTI as well.



AXSM: +395% 2027 EPS estimate and flagging. Pivot over $238.80ish.



TWLO: Flag remains healthy and catching support at the 21DSMA. Pivot over $204.00.



TGTX: a C&H at the end of a four-year base. +98% 2027 EPS estimate. Pivot over $44.75.

STX, SNDK, and MU had a lot of climactic action and are now extended.

AAOI: Look for support around the 50 DSMA.

ARM has morphed into an elite new leader. Extended.

SATS is getting sloppy, but patience may still win.

AMD is just like ARM, morphed from slug to TML in days.

RKLB will likely be a source of funds to pay for SpaceX.

podcast alpha @podcast_alpha_x · 6m

xAI lost $6.4 billion in 2025 on $3.2 billion in revenue. Revenue grew 22%. Losses grew 310%.

That is the business attached to SpaceX's $2 trillion IPO.

@profgalloway , @ProfGMarkets : by Q1 2026, xAI lost $2.5 billion in a single quarter - annualizing above $10 billion and accelerating. Total company net losses in Q1 grew 700% year-over-year.

Starlink is genuinely excellent - 36% operating margins, no serious competitor. xAI is the problem. They come bundled.

Subscribe to get full podcast brief and more - podcastalpha.substack.com/p/bond-investo...

Prof G is smart, but his TDS is unbridled; he HATES Elon and has Completely Lost his objectivity.

DDOG: has experienced Insanely persistent accumulation!!!!!!!!!!

ROIV: Looks like a failed breakout for now.

QCOM has a great prior uptrend and price is leading earnings. I was very close to buying last week, but held off due to spotty earnings.

CRWD has been under insane accumulation, then a four-day digestion, and now it's roaring into new highs.

The market is so hot, *short digestions are the new standard*, for now. PANW as well.

Palo Alto Networks (PANW, BUY, PT $265) Key Takes from PANW Ignite On Tour in NYC - *We attended PANW's Ignite On Tour user conf today in NYC. Unsurprisingly, Mythos and AI security were top-of-mind for customers. Our key takes: 1) No customer hesitancy from 10% price increase (some longer appliance lead times were noted); 2) Portkey and Koi attracting customer interest, while Prisma AIRS viewed as a premium offering; & 3) Cortex Cloud is now at parity with Prisma Cloud and could reinvigorate the cloud security business.* https://javatar.bluematrix.com/pdf/A4d1iUxR

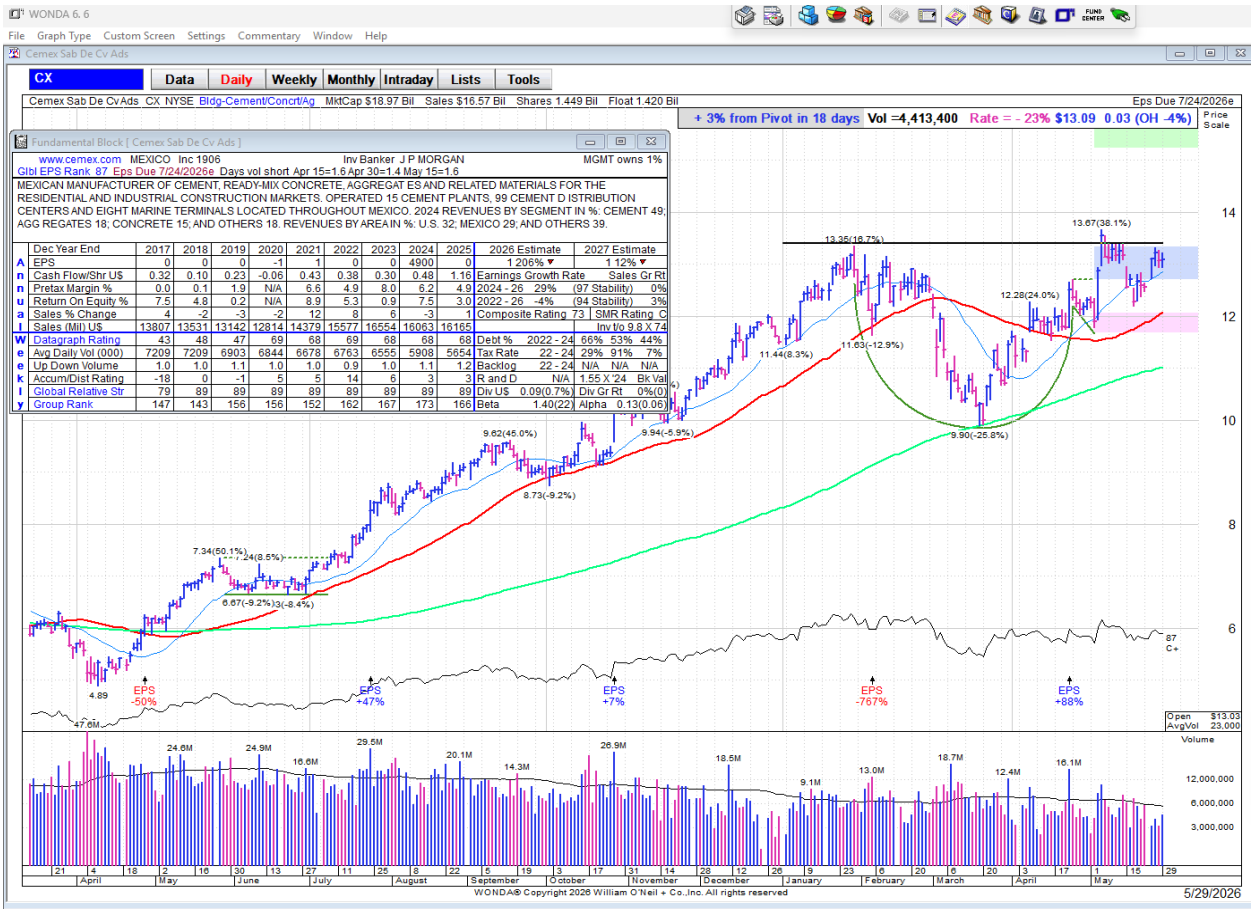
Zscaler (ZS, BUY, PT $200) Preview: Expect Solid F3Q + Well FED F4Q - *ZS is in a position to beat cons F3Q ARR growth of 24.5% yoy as survey results were solid, & we view the investor bogey of $160-165M NNARR as achievable. While sentiment skews negative due to concerns on org growth/competition, we remain positive on the expanding prod portfolio, reasonable FY26 expectations (SASE a top '26 growth area), potential RC synergies & improved GTM. ZS trades at 29x NTM FCF which screens attractive vs PANW 35x/FTNT 36x.* https://javatar.bluematrix.com/pdf/TGuS4AWb

CYTK is flagging after a short pole and four weeks tight.

WWD is in a Darvas box.

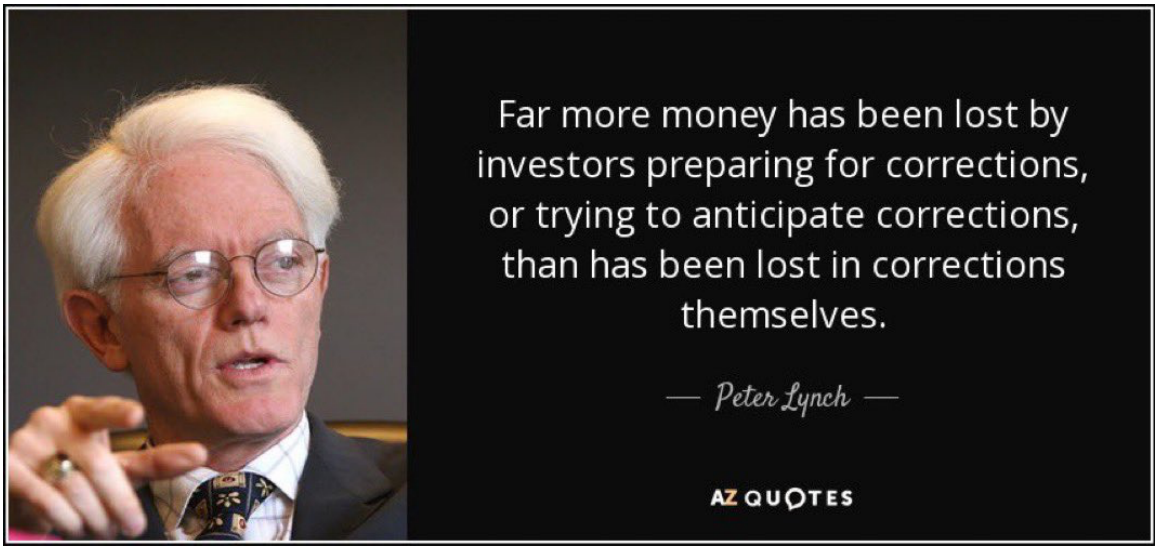
*Susquehanna launched coverage on **Woodward** (WWD) at Positive, tgt $423; WWD designs, manufactures and services fluid, combustion, electrical, propulsion, and motion control systems that perform in extreme environments -- from aircraft and power plants to marine vessels, refineries, and mines. Between FY25 and FY28, they are forecasting WWD to grow: 1) revenue at a 12% CAGR; 2) EBITDA at a 17.5% CAGR; and 3) FCF at a 24% CAGR. The company is supported by commercial Aerospace OEM backlogs exceeding 15,000 aircraft, steady growth in utilization, and a broader shift toward electrification from hydraulic systems. The key to the WWD story is its strong exposure to Boeing and Airbus. As both OEMs ramp production, they expect the company to benefit, particularly with the higher-volume narrowbody programs. While they do recognize near-term headwinds for WWD's MRO business from elevated fuel prices and the potential for increased aircraft retirements, they believe the company remains well positioned over the medium-term. Furthermore, the effective integration of its recent acquisitions should provide additional growth opportunities.*

▼ CHINA and Other Countries



CX: Sweet C&H, pivot over $13.80ish.

▼ One of Bill's Golden Rules



▼ Random Thoughts

My envy list is longer than it's ever been.

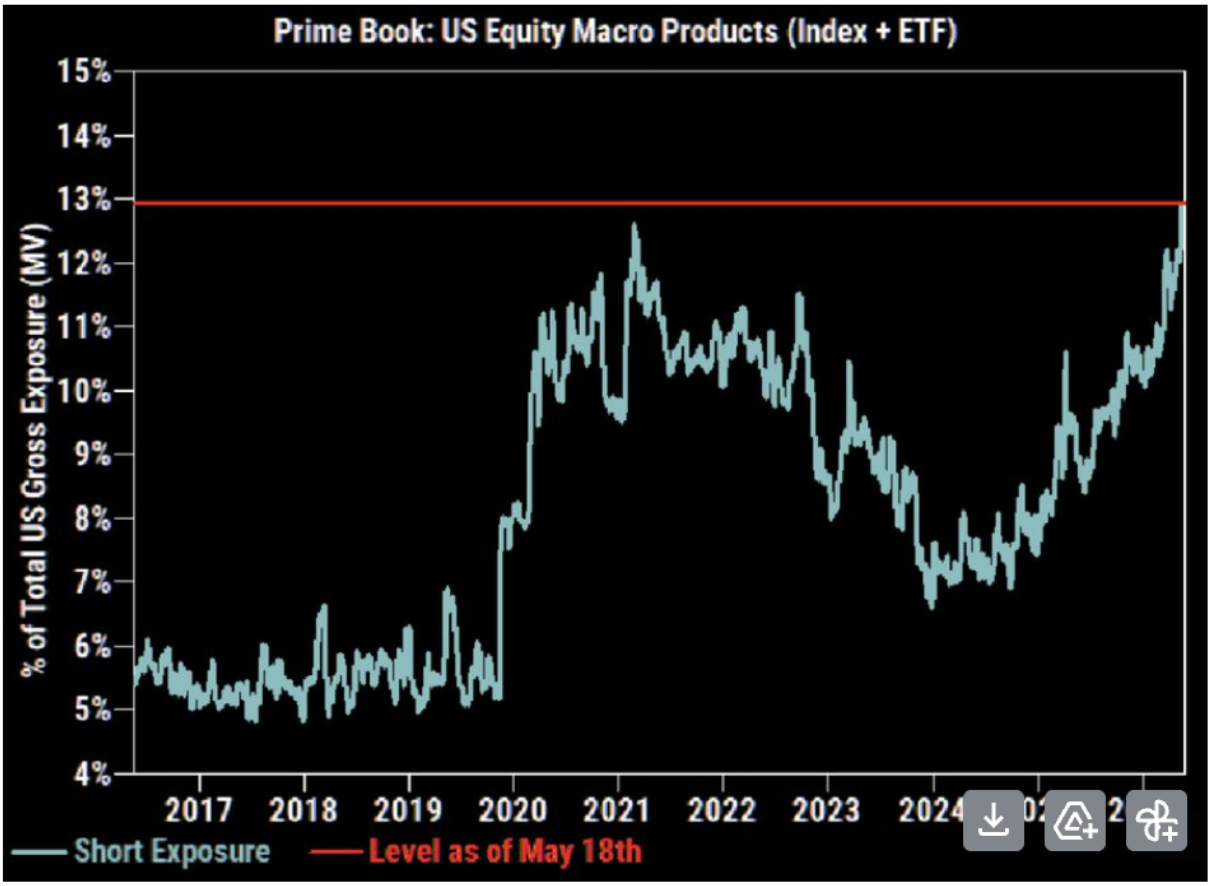
Is the 21 DSMA the new 50DSMA??

Most stocks do follow the general market trend, but that had not been the case until last week, when breadth expanded significantly. This is the reason so many professional portfolio managers hate this market. Simply, the level of underperformance has been as high as I can remember.

There are so many names that I don't cover because they are not elite but still quality, like EQIX, that, as a group, signal the general health of the broad market.

When the market throws crushing days and weeks at us, remember, it's just one day, one week & the "Golden Goose" promises us there will ALWAYS be another wave of new Wicked Beast TMLs.

The market is in a rare moment where AI is being discounted in minutes, whereas past technologies took years to be factored into price. This is resulting in very short basing periods. Historic precedents have been thrown out the window. A perfect example is CRWD.



Hedge funds are max short right now. This is very bullish.

▼ What could go wrong?

Shortages are increasing, and demand is soaring. Fujikura was a $100 billion mega cap, AI optics manufacturer, not some tiny flea. If, if, if this type of manufacturing shortage expands, many more AI-related names could also fall -50% in 5 days. Note LITE and other US optics manufacturers were weak last week. Caution!!! This contagion risk is real and far more acute, as the market has chosen AI as the dominant fundamental factor, as it is looking past the Iran situation. The good news is the earnings cycle is nearly over, so if, if, if the shortages are spreading, it's unlikely they will be reported until the next earnings cycle. If the shortages ramp before earnings, management could start to preannounce the negative impact on future earnings. I will not anticipate, I will let the market tell me. My #1 indicator will be the 50DSMA/guardrail. If the shortages cause a big downtrend or bear, it is NOT the end of the AI "Golden Goose" mega-trend tsunami. It only elongates it and will reset the risk lower. If, if, if the optics names follow up on Friday's supportive closes, they could signal Fujikura's problems are specific to them, making leading names great opportunities. *If the US names weakness continues, I will sell them*. ALWAYS LIVE TO FIGHT ANOTHER DAY.

From Grok: *This is an industry-wide problem, not exclusive to Fujikura (likely what "Fuji Cara" refers to).*

Fujikura, a major Japanese manufacturer of optical fiber cables (especially high-density products like Spider Web Ribbon/SWR and Wrapping Tube Cable/WTC for AI data centers), has publicly discussed capacity constraints, raw material shortages (notably hydrogen for fiber production and helium for manufacturing processes), and inability to fully meet surging AI-driven demand even after new plants come online.

Why It's Industry-Wide

- *Explosive demand from AI data centers (which can require 36x more fiber than traditional setups) has outpaced supply globally. This affects hyperscale builds, FTTH/Broadband projects (e.g., BEAD in the US), and other infrastructure.*
- *Raw material bottlenecks: Shortages of key inputs like hydrogen, helium (exacerbated by geopolitical issues in the Middle East affecting Qatar supply), and glass preforms are hitting multiple producers. Helium is used in fiber drawing/cooling to prevent contamination.*

- *Extended lead times: Ribbon fiber (key for data centers) has lead times of 60+ weeks in some cases; loose tube fiber into Q3 2026 or beyond. Some manufacturers have sold out inventory through 2026.*
- *Major players affected: Issues are reported across suppliers including Corning (which has raised expectations but faces constraints), as well as Chinese and other global producers. Prices have risen sharply (e.g., significant increases in bare fiber prices in China and elsewhere).*

Fujikura is investing heavily (hundreds of billions of yen, including major US expansion) to triple capacity, but executives have noted structural limits persist. This mirrors broader industry warnings of a "perfect storm" or "looming shortage" into 2026–2027.

In short, Fujikura's challenges highlight a systemic supply-demand imbalance driven by AI growth, not company-specific issues. The tightness is expected to continue, with potential delays for smaller projects or non-data-center deployments as priority goes to big buyers.

The Kospi has gone parabolic, but it's not as scary as it looks. The top two largest components Samsung and SK Hynix equal 60% of the index, which is understandable. What rattles me is the excessive use of margin in Korea.

▼ Dominant Fundamental Factors (DFF)

Current Dominant Fundamental Factors in order of importance:

- **Trump administration, deregulation greasing the gears of commerce and jet fueling the "Golden Goose of Capitalism" and Free Markets.**
- **AI**
- **Semiconductors**
- **Crypto, Digital Asset Ecosystem, and DeFi**
- **Biotech**
- **EVs**

CREATIVE PLANNING					@CharlieBilello		

Check out the forward performance above with the conditions we are experienced in April 2025. The odds are very favorable for IT and LT. Bill would be positioning himself with capital to pounce. Remember, just like in 2024, there will be dozens of stocks that will go up hundreds of percent.

75 years of evidence that prices will be dramatically higher in 12 months. If history repeats, what will it do for your net worth? What did 2024 do for your net worth?

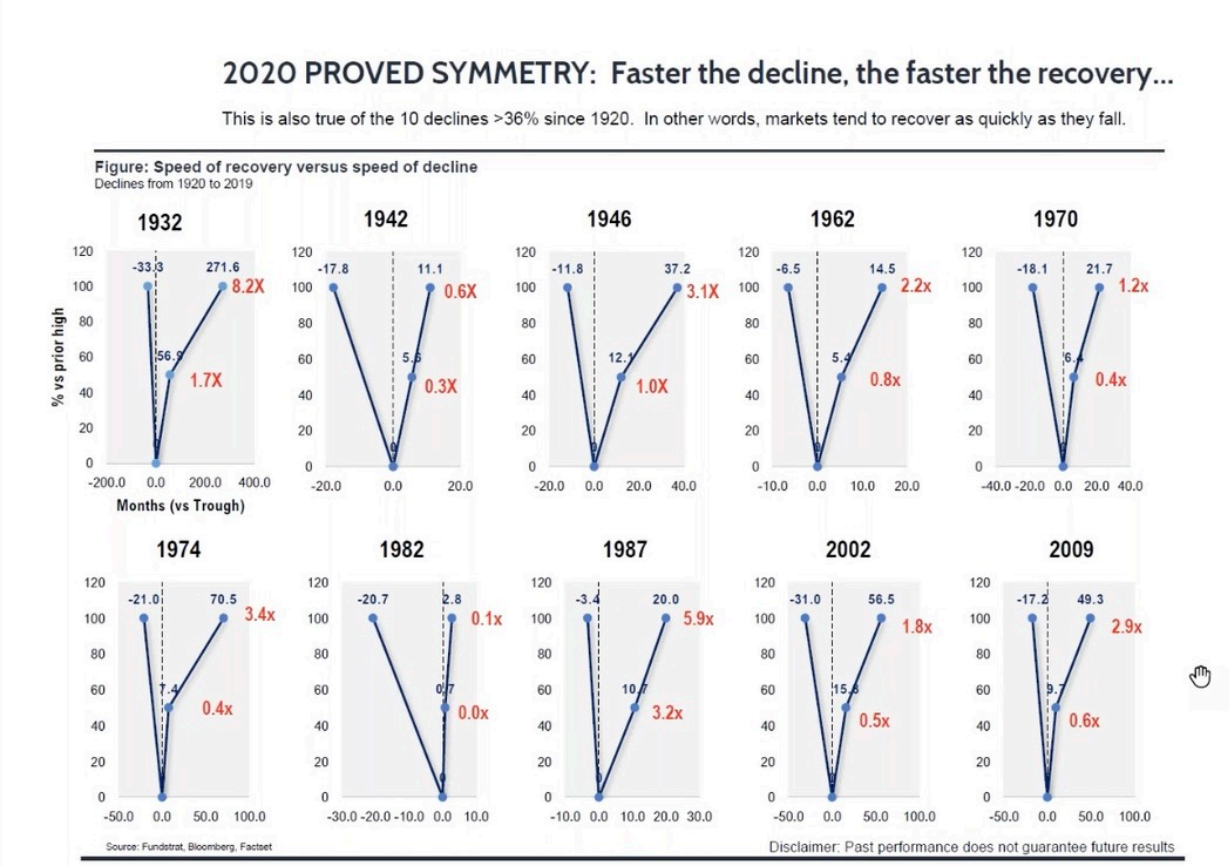
CREATIVE PLANNING						@CharlieBilello		

Opportunities this good are rarely presented.



A third leg down is possible, just like 2020 and 1998, but this decline has been so swift that it increases the odds of a V-shaped recovery.

Talk about a bear killer.

DISCLAIMER All content published by the Roppel Report — including reports, commentary, emails, social media posts, and any other communications originating from us or our partners or affiliates — is intended solely for educational and informational purposes. Nothing we publish constitutes personalized investment advice, a solicitation, or a recommendation to buy or sell any security. Our work is general in nature and is not tailored to the financial situation, objectives, or needs of any individual reader.

Position Disclosure: At the time of each report's publication, the author and/or affiliated entities - including client portfolios and proprietary accounts managed by our affiliated investment adviser, Roppel Capital Management, LLC, may hold a position in one or more securities discussed therein. Specific position disclosures appear at the end of each individual report. All positions are held for investment purposes and are subject to change at any time without notice.

Conflicts of Interest: We receive no compensation, directly or indirectly, from any company mentioned in our work and have no business relationship with any of the companies we cover. Our opinions are independent and solely our own.

Risk Disclosure: Investing and trading in capital markets carry a high level of risk and may not be suitable for all investors. The use of margin or leverage can amplify both gains and losses. Before investing or trading, you should carefully consider your investment objectives, experience level, and risk tolerance. The possibility exists that you could sustain a loss of some, all, or more than your initial investment. You should never invest money you cannot afford to lose.

We strongly encourage all readers to seek advice from an independent financial advisor and other qualified professionals before making any investment decisions.

No Guarantee of Results: Past performance is not indicative of future results. All information provided is believed to be reliable but is not guaranteed as to accuracy or completeness and is subject to change without notice.

At the time of publication: The author and/or affiliated entities - including client portfolios and proprietary accounts managed by our affiliated investment adviser, Roppel Capital Management, LLC, hold a position in the following securities referenced in this report:

AAOI, ALAB, ANET, ARM, BE, BTC, CIEN, CRCL, ETH, GDX, GLD, GLW, INTC, LITE, LLY, MRVL, MU, NBIS, NVDA, PURR, RKLB, QQQ, SE, SNDK, TSLA, XBI.

ALL POSITIONS ARE SUBJECT TO CHANGE WITHOUT NOTICE.
