Please find important disclaimers at the end of this report.

▼ Market Temperature

My Buy Window is: Open

Our team uses a systematized sell discipline to mitigate losses in a falling market. The specifics of this sell discipline may change over time (you can request a summary of the firm's current approach by contacting info@roppelreport.com, but generally the firm will sell off positions in multiple tranches as a security's price drops from a specific target level (commonly its purchase price).

All buy ideas require a significant pickup in volume to validate the breakout or buy point—minimum volume pickup of 40%, ideally 500%+.

0 is the most negative term outlook, and 10 is the most bullish. It's reasonable to say that if the market temperature is 5, your total exposure could be 50% long.

Short-term Trend 1 to 3 weeks (7/10)

***Please note that the short-term temperature can change at any moment, and I have the least confidence in this time frame.**

Intermediate-term Trend 4 weeks to 5 months (9/10)

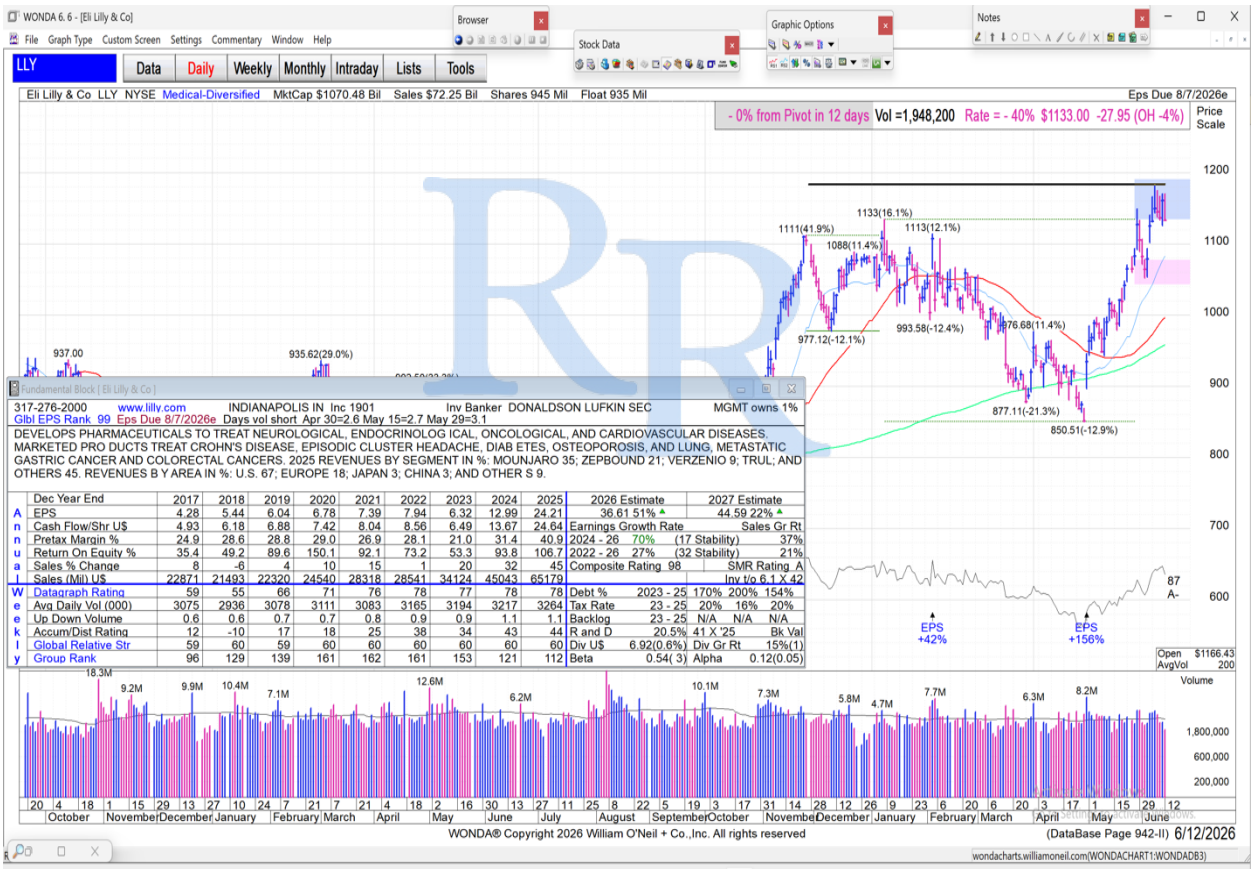
Long-term Trend 6+ months Trend is up: Bullish (10/10)

Because sentiment and many measures became deeply oversold in April of 2025, to levels signaling panic selling. Conditions like the market is experiencing almost always result in significantly higher prices in 12 to 18 months. We remain in a Raging AI-driven, disruptive tech Boom that may be turbocharged by a new pro-growth President. This is a very potent cocktail of technical and fundamental variables that historically give birth to new bull markets that can rise 100% and spawn dozens of new leaders that rise hundreds of percent, very much like 2024, except longer in duration, when not sidetracked by unforeseen black swan asteroids.

Regardless of what the market does in the next few months, I am very confident that it will be significantly higher in 12 to 18 months!!!!!!!!!!!!!!!!!!!!!! I can't believe we are going to get another opportunity to perform like 2024!!!!!!!!!!

▼ Best Ideas

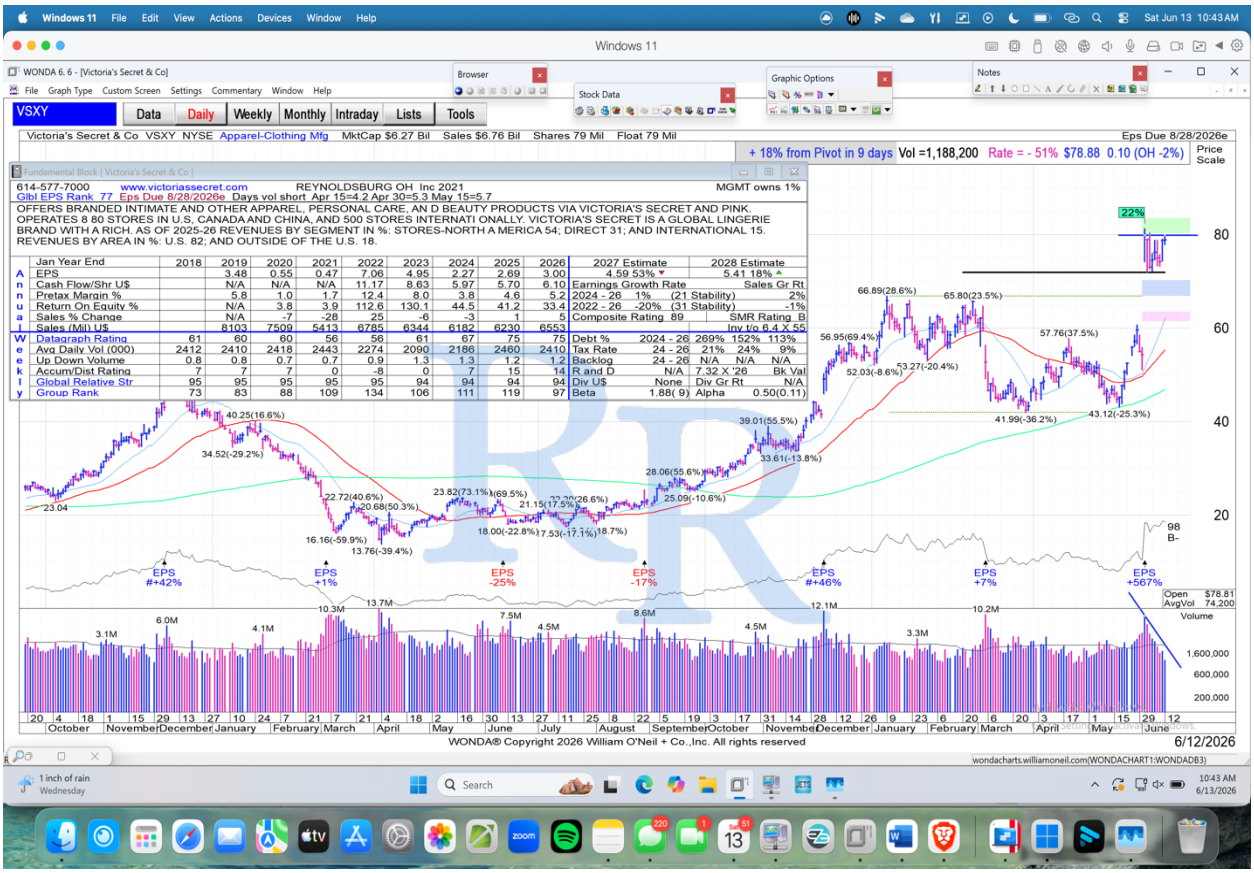
This list is only to be utilized when the Market is in an uptrend. Ideas are only actionable at or above pivot points on significant increases in volume.



LLY: I can't say enough positive things about its technical and fundamental metrics. The fundamental story is also Top Notch!!!!!!!!!! +106% ROE is in record book territory. Pivot over $1184ish. I am considering buying Jan 27 expiration calls. There are no locks, but LLY represents the best complete package I have seen in quite a while.

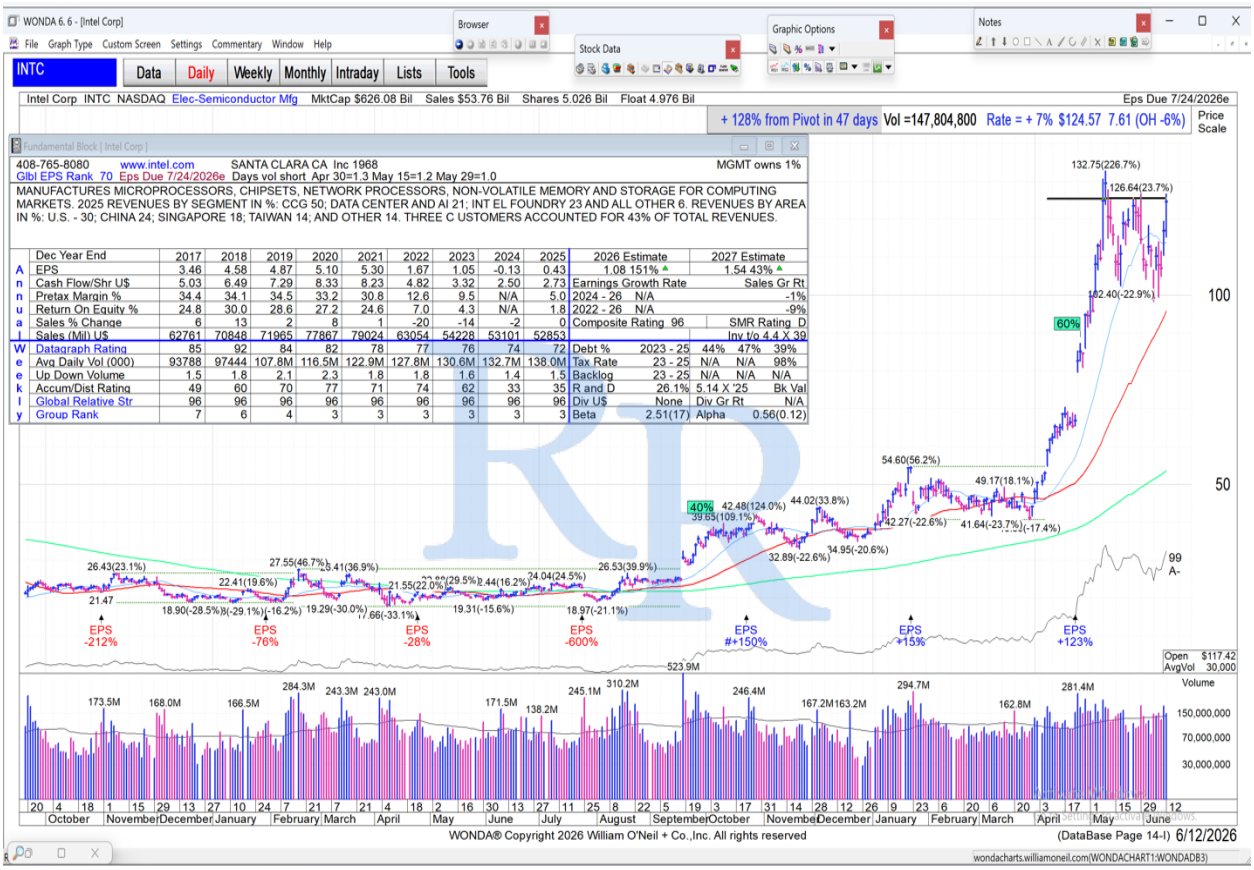
https://www.nvidia.com/en-us/on-demand/session/gtcdc25-dc51071/

Thank you @Jeff F

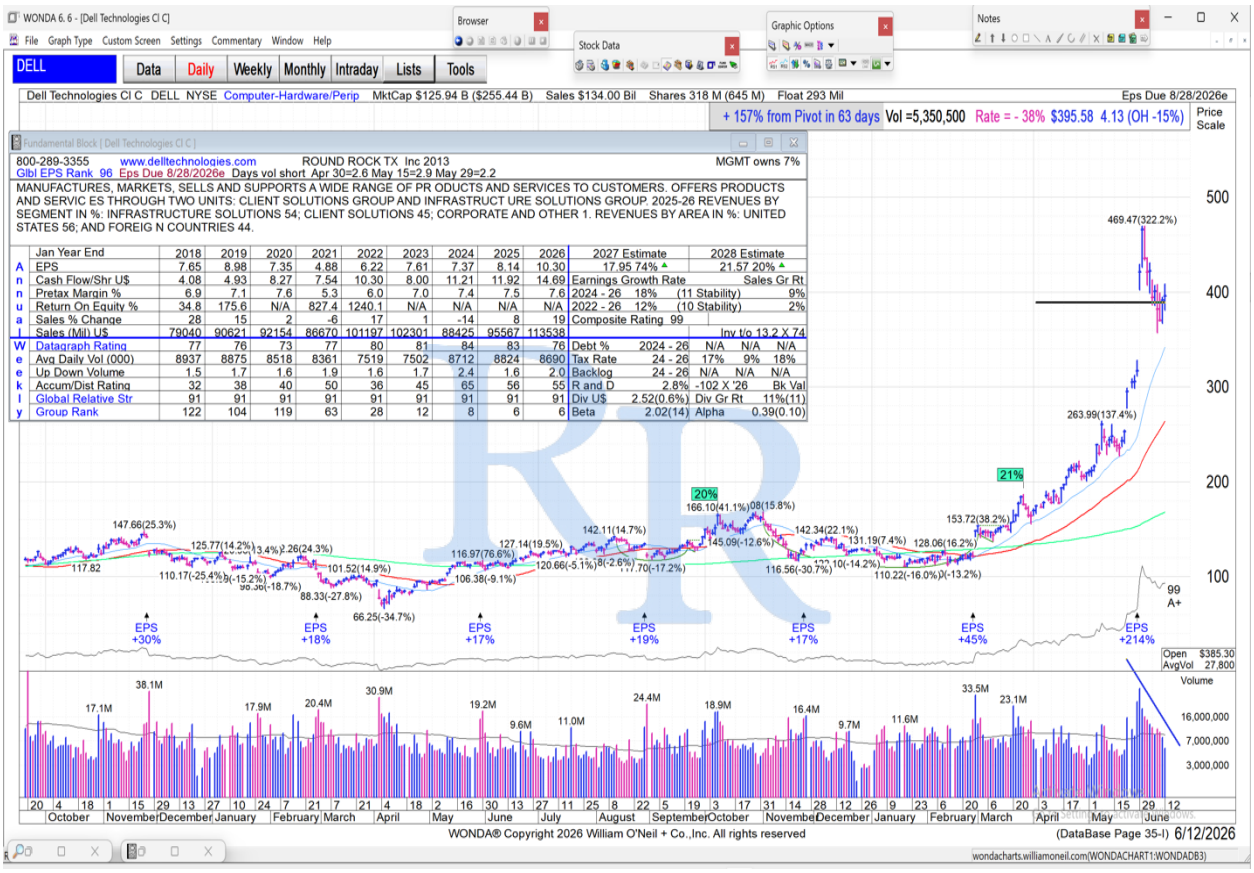


VSXY is a second-order effect of LLY above. Never underestimate human vanity. Last quarter's +87% earnings beat says woman are feeling better about their slimmer new bodies. Note the volume drying up as the digestion persists. Pivot into new highs.

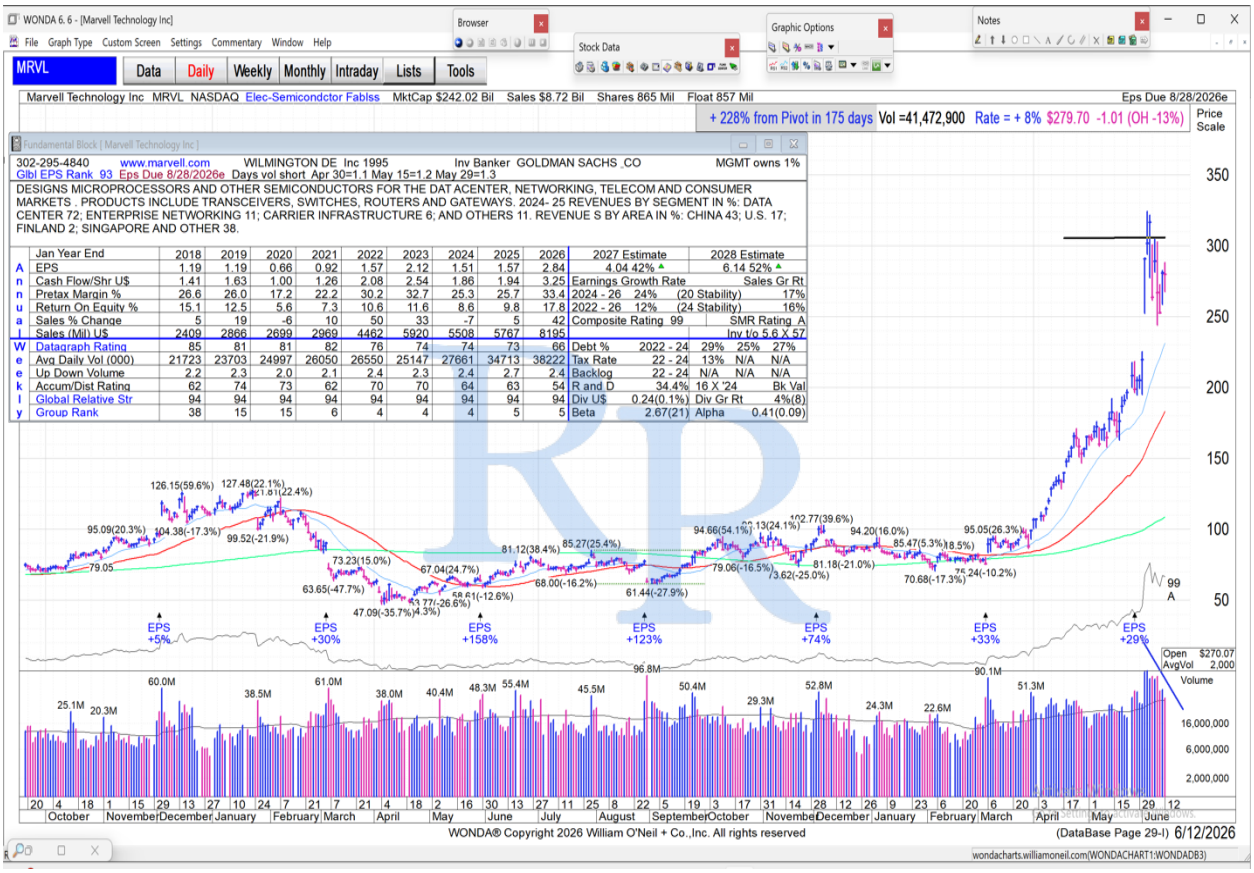
XBI: There is a very clear base-on-base setup right now, sitting in an overall LT massive base structure. RS has been cooling, but I am very bullish on this technically and fundamentally.



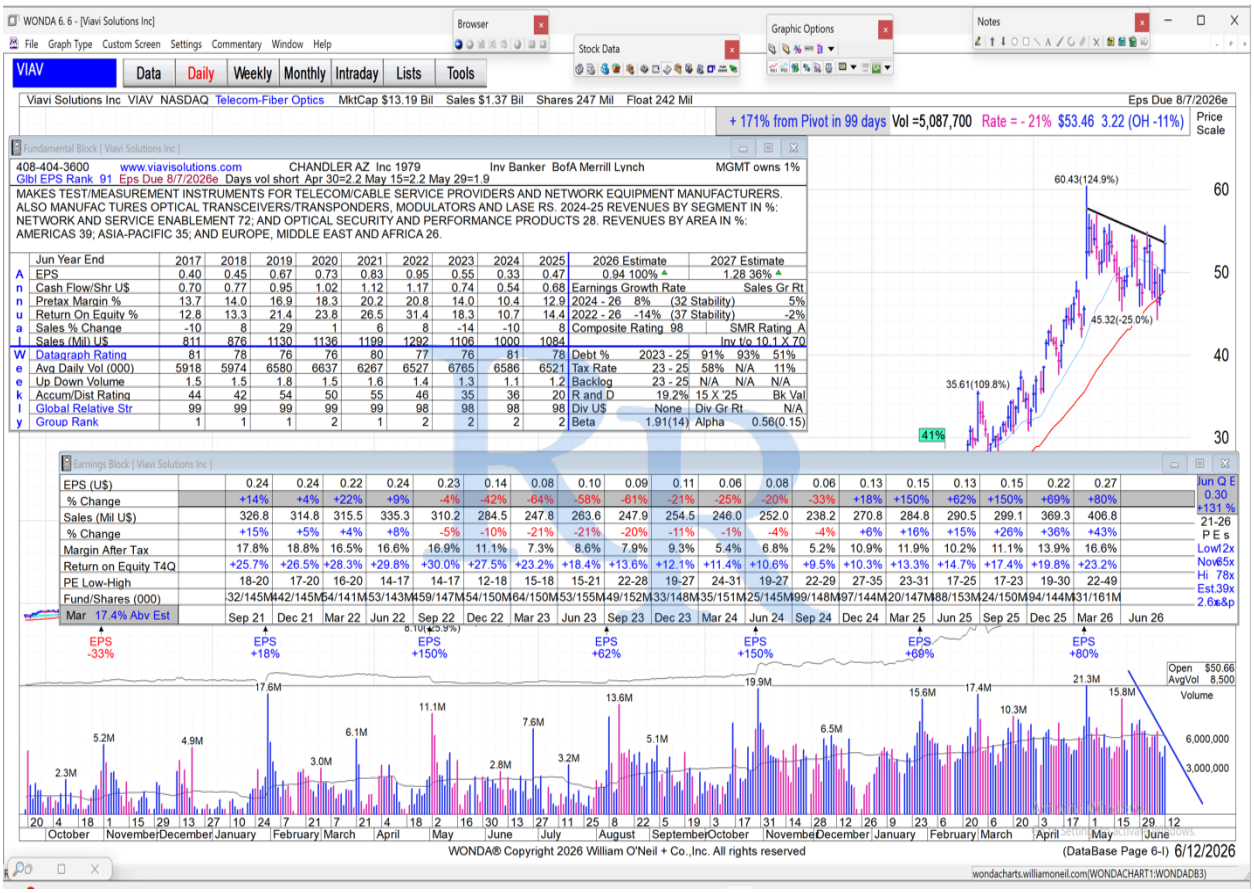
INTC: A 23% deep flat base is irregular, but I think it will be actionable with some tight action. Pivots over $126.80 and $133.00.



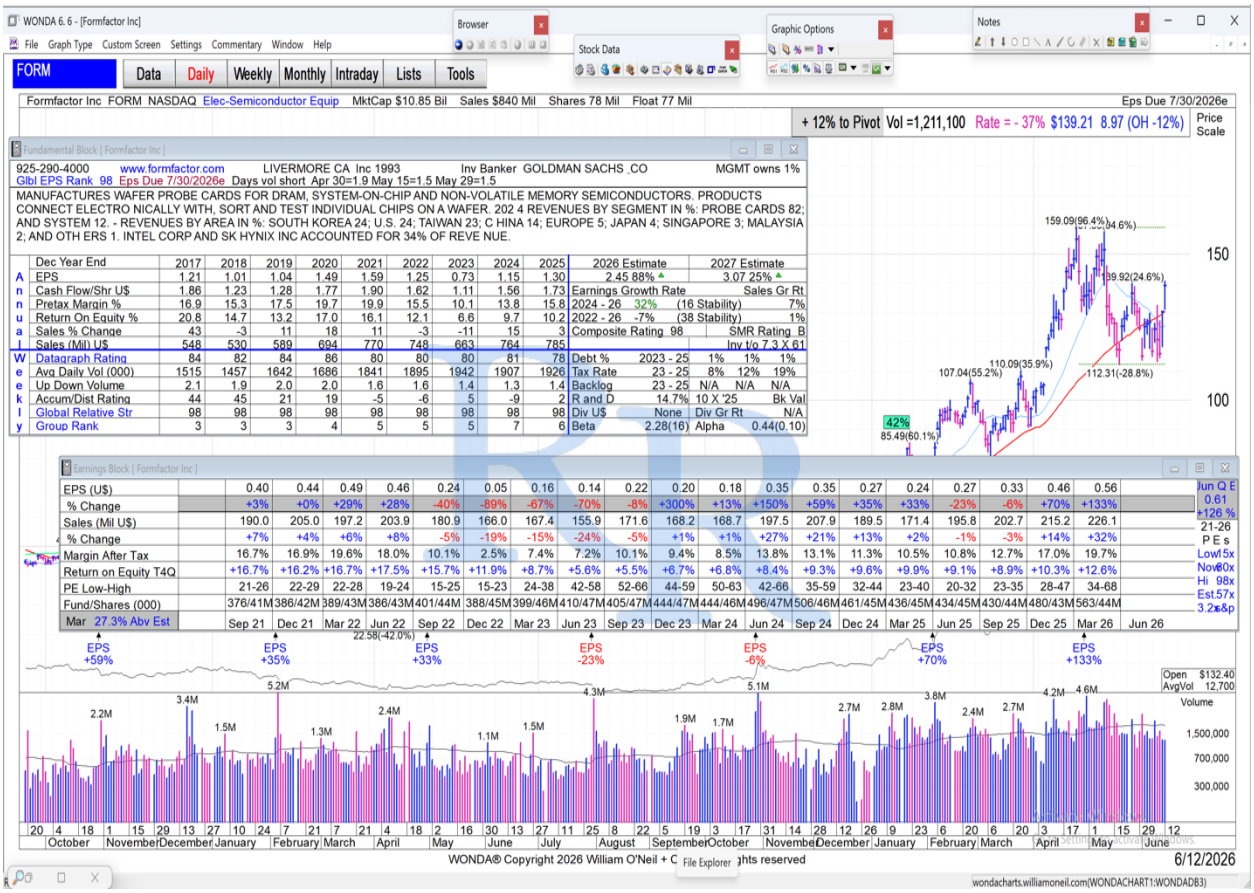
Dell: Note the volume dried up as the digestion persisted. The market is moving from chips to hardware in the next wave of the AI buildout. A shake down to the 21DSMA is not impossible, but +64% EPS blowout beat says prices are moving higher.



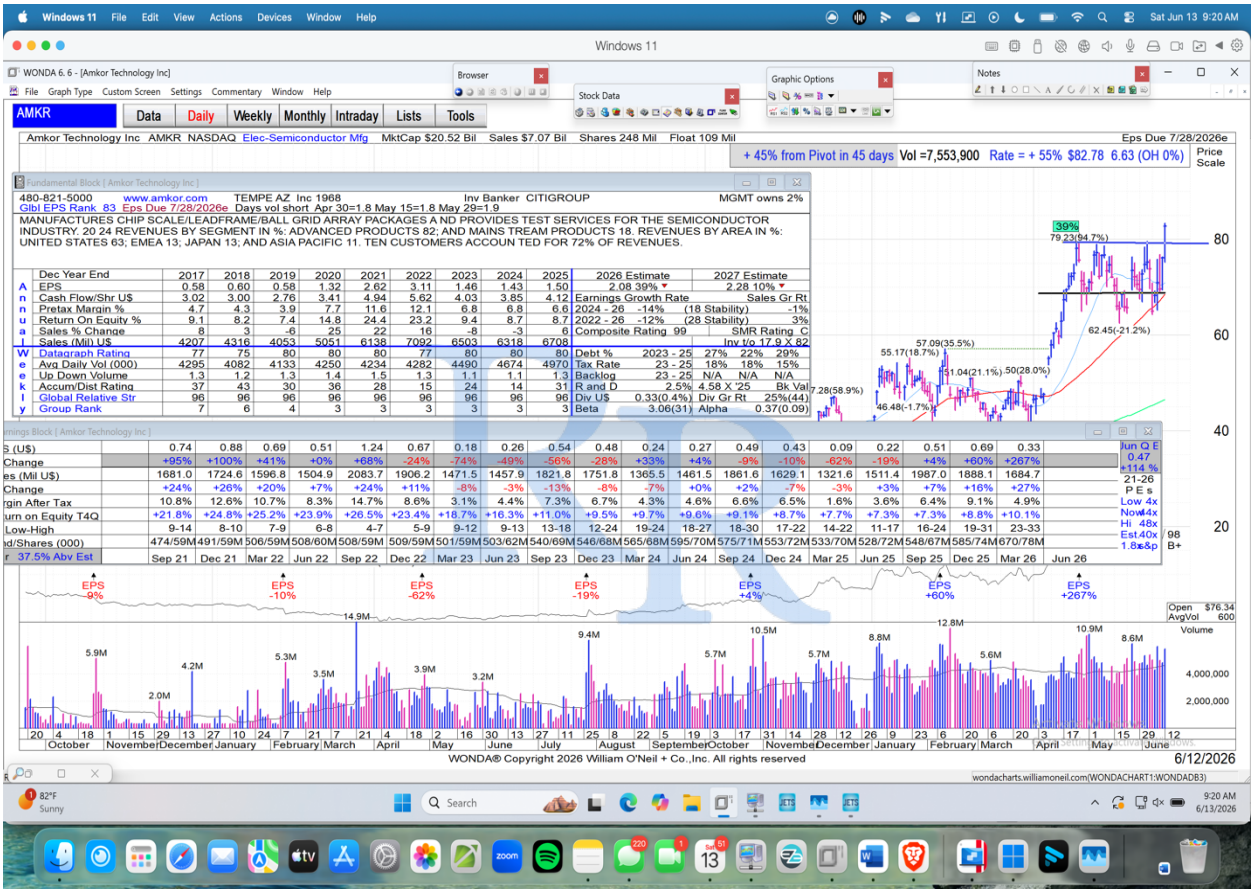
MRVL may be my favorite chip idea. I would like more digestion, but it doesn't *have to* digest. In late March, SNDK fell -28% over nine sessions, then roared into new highs without any digestion before breaking out. When institutional demand overwhelms a stock, they just go!!!!!!! I have a new guideline: follow the leader. Price is the #1 indicator.



VIAV: The first names to break out after digestion are often the most powerful new leaders. Note the accelerating sales growth and the volume dried up the longer the digestion persisted. Pivots starting right here.



FORM: I love my liquid leaders and will continue to hold them, but there seem to be a lot of new leaders that were too small for my consideration a year ago. Form has accelerating earnings and sales and appears to be emerging above the 50DSMA.



AMKR is ripping into new highs before the index and picked up a +45% increase in volume. I love the accelerating earnings and sales, one of Bill's favorite metrics. Actionable right here.

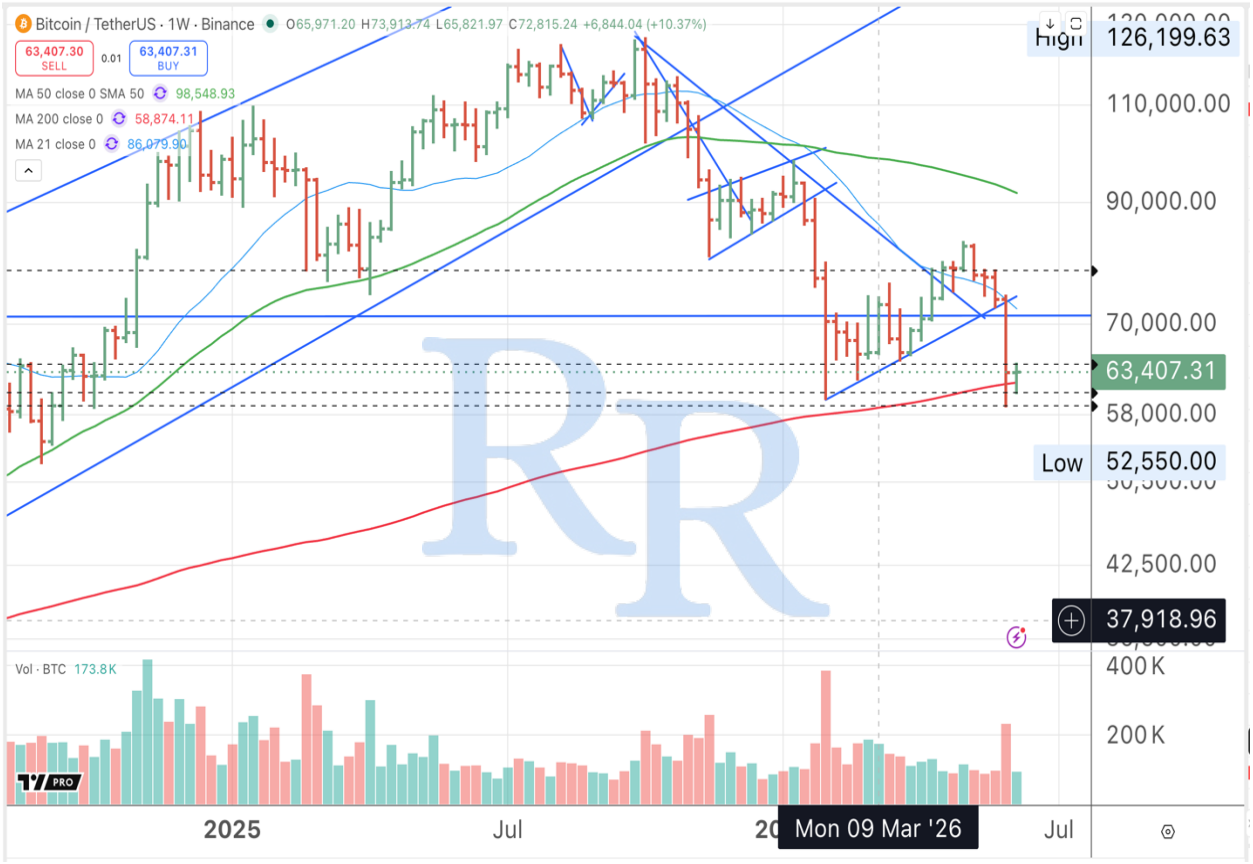
▼ Crypto

On December 15, 2018, Matt D'Souza said: "Many skeptics and speculators claim Bitcoin is dead purely based on its deep and volatile market correction." In 2002, similar assertions were directed at CSCO, AAPL, and AMZN, who were also pronounced "dead" because there was too much focus on the stock price rather than the ecosystem growth, rate of adoption, and improving fundamentals. From those Dot-Com Bubble "dead lows" to present trading levels, these stocks have returned roughly 390%, 34,000%, and 32,000%, respectively.

BTC—We are currently in a macro correction, and it is uncertain how much lower prices will go. Many of the best stocks, such as Facebook and Nvidia, have already experienced 40-55%+ corrections, yet no one is pronouncing the death of social media or the end of Compute/AI. Of course, these companies are fundamentally sounder and more mature than the Bitcoin network.

***********The point simply being that predicting the long-term future of a technology solely based on price movements is unwise. **********

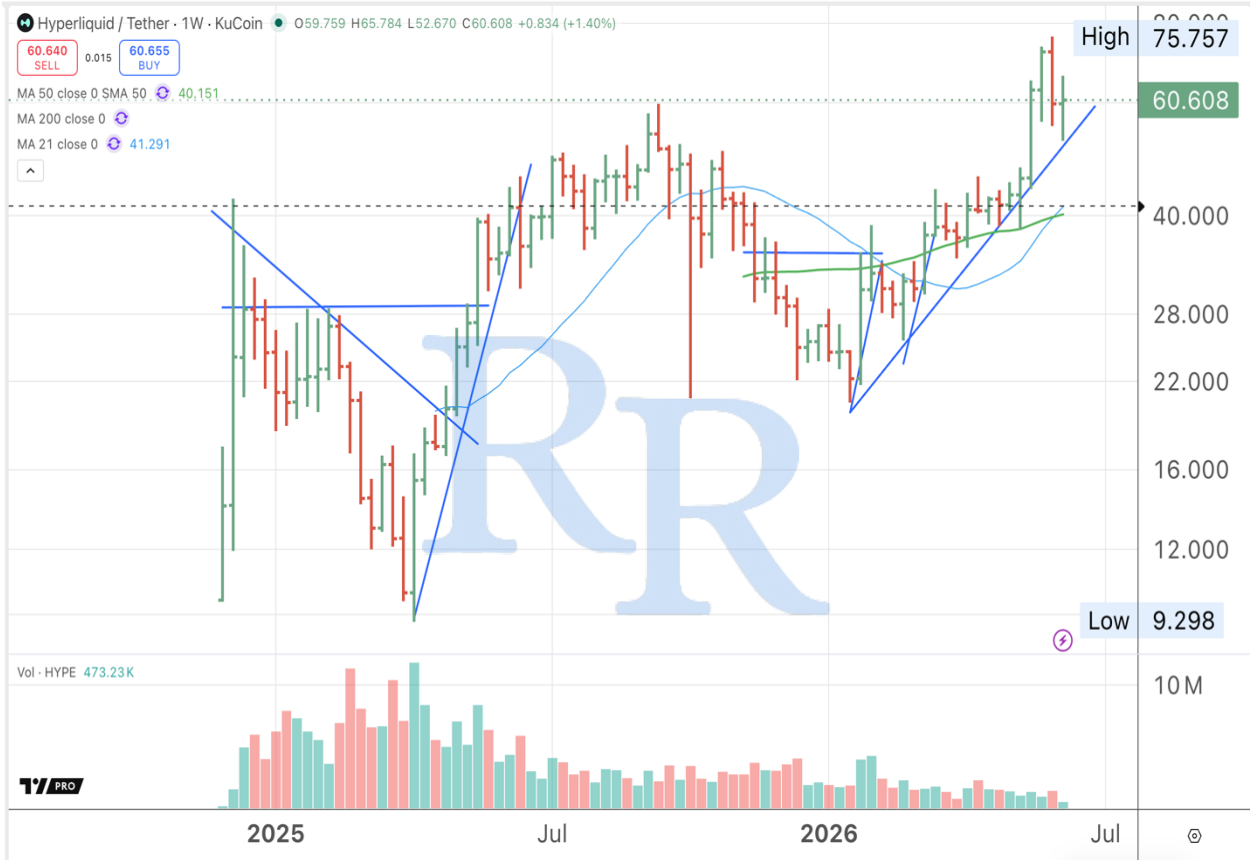
Just as "Bitcoin becoming the world currency and replacing Visa" at $20,000 was foolish, "Bitcoin is dead" at $66,500 is equally as foolish.



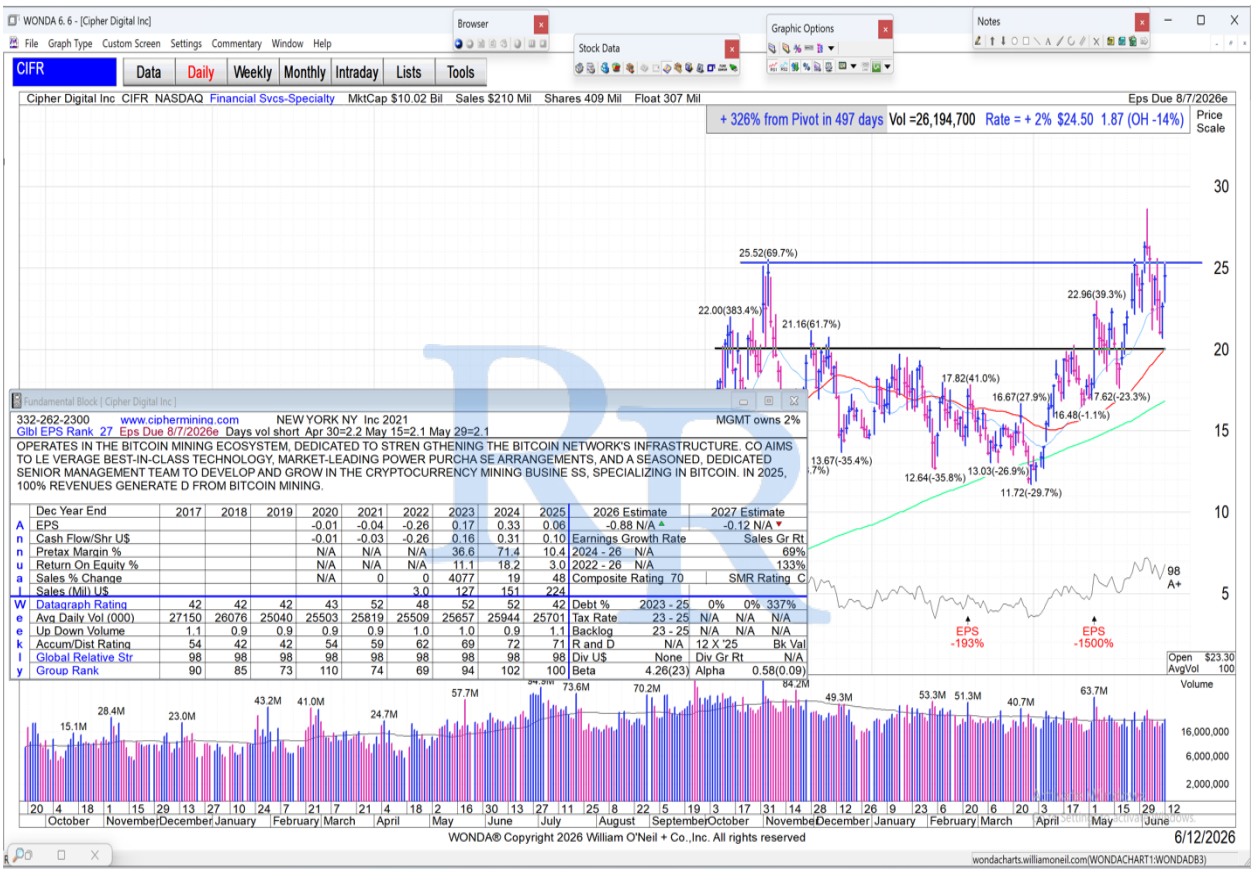
BTC has undercut the March lows and has a chance to become a double bottom, but a new uptrend will not start until it breaks out over $83K.

BTC needs to get above its 200DSMA before it can be considered in an uptrend.

Large banks planning to introduce tokenized deposit network next year (C, JPM, BAC, WFC). *WSJ



HYPE continues to lead this space. This little digestion will likely prove actionable.

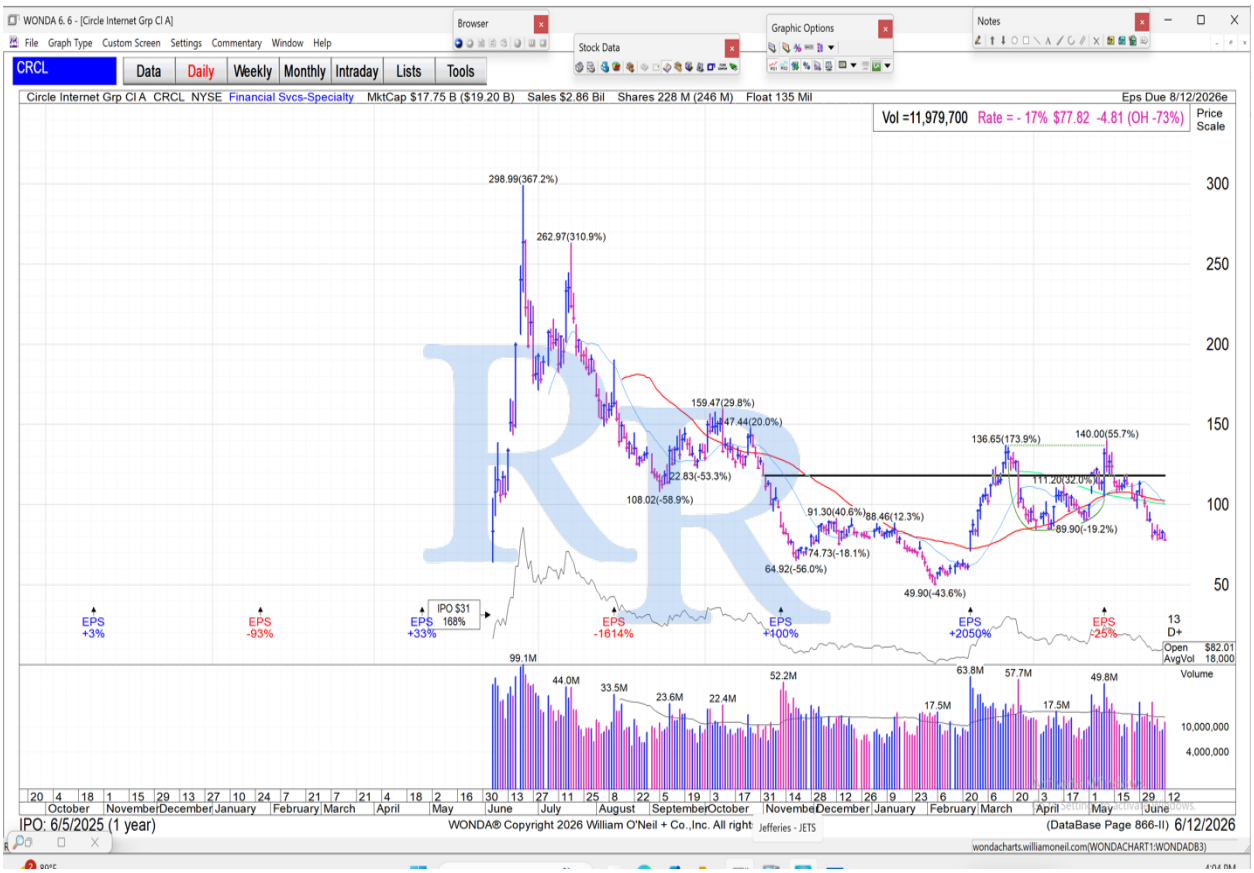


CIFR: I don't love the miners' volatility, but the fact that CIFR is sitting so close to new highs after the recent shake yells strength. Into new highs would be actionable.

https://composable.com/insights/stablecoins-ai-agents-digital-payments

Extreme fear moments have historically been *great* buying opportunities.

The Stablecoin total market cap looks like a beautiful high-tight flag. A move over $322.00 could ignite CRCL.



CRCL is not actionable until it exceeds $140.00, but cowboys could start a tiny, high-risk position over $119.00.

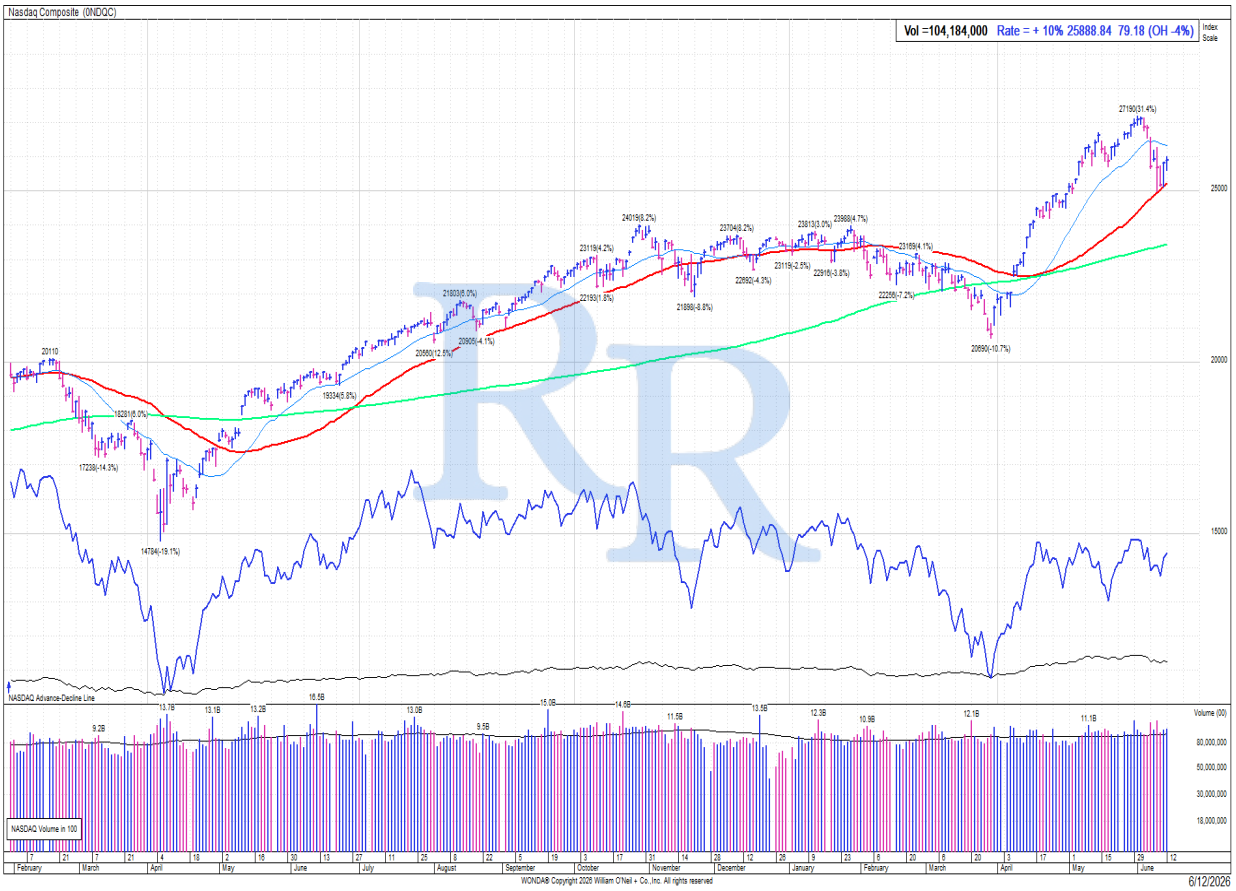
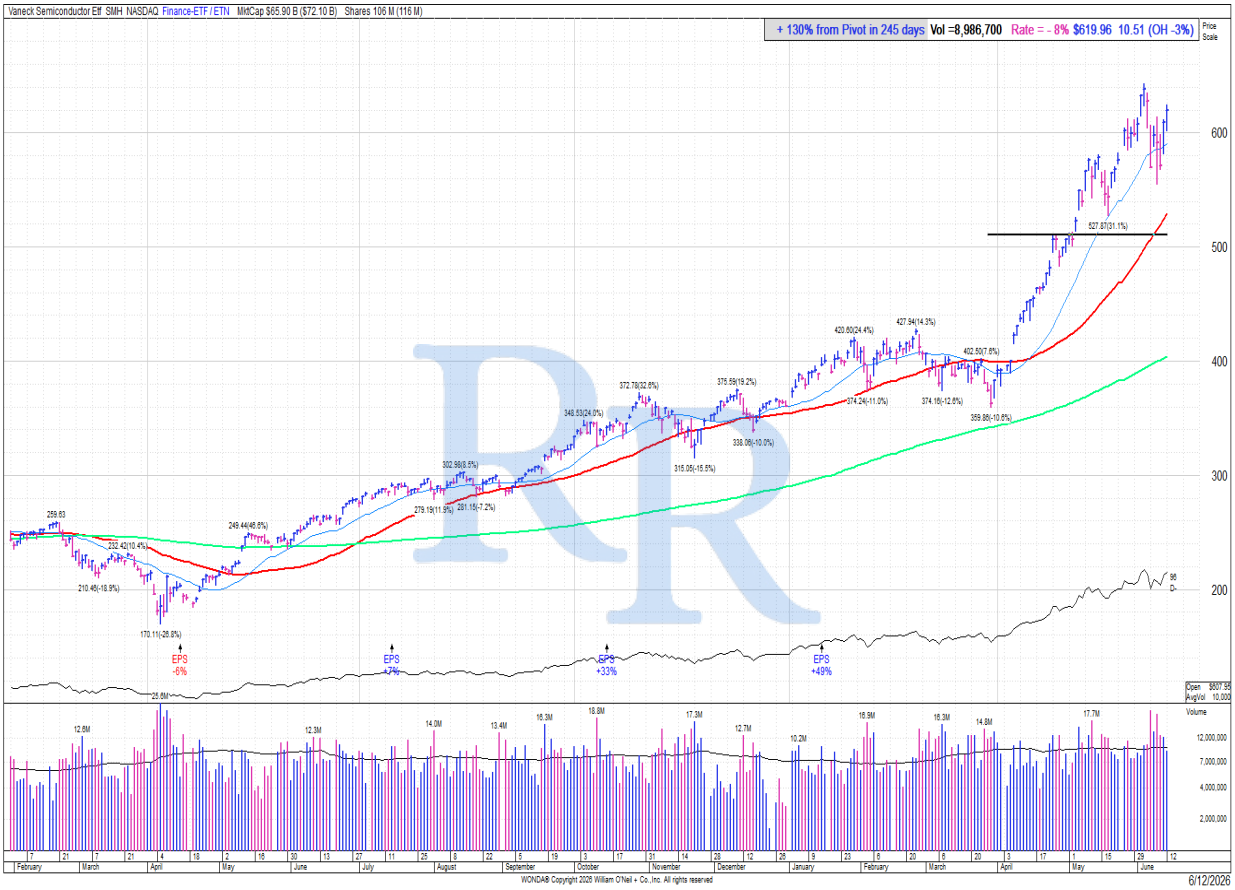
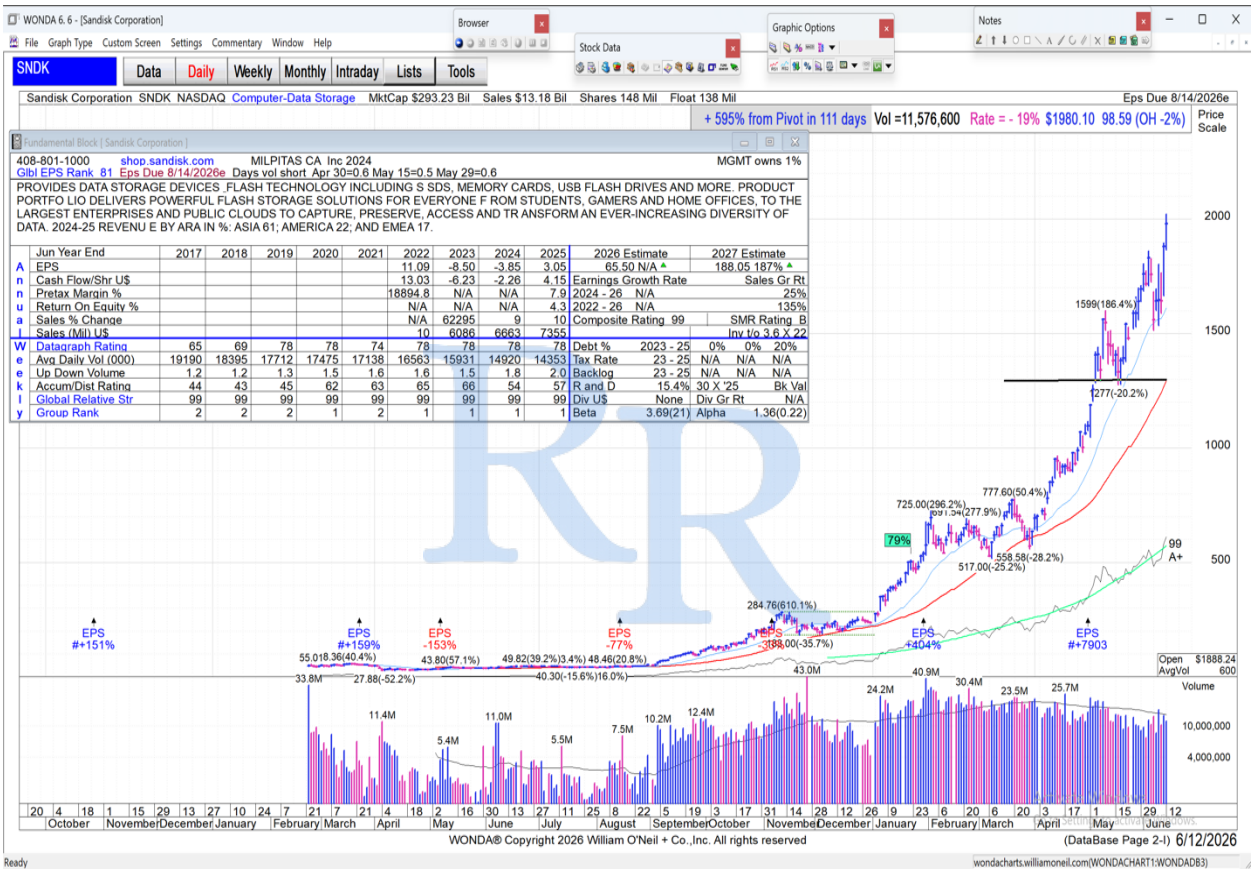
▼ Market, Indexes, Indicators, and Dominant Factor Charts



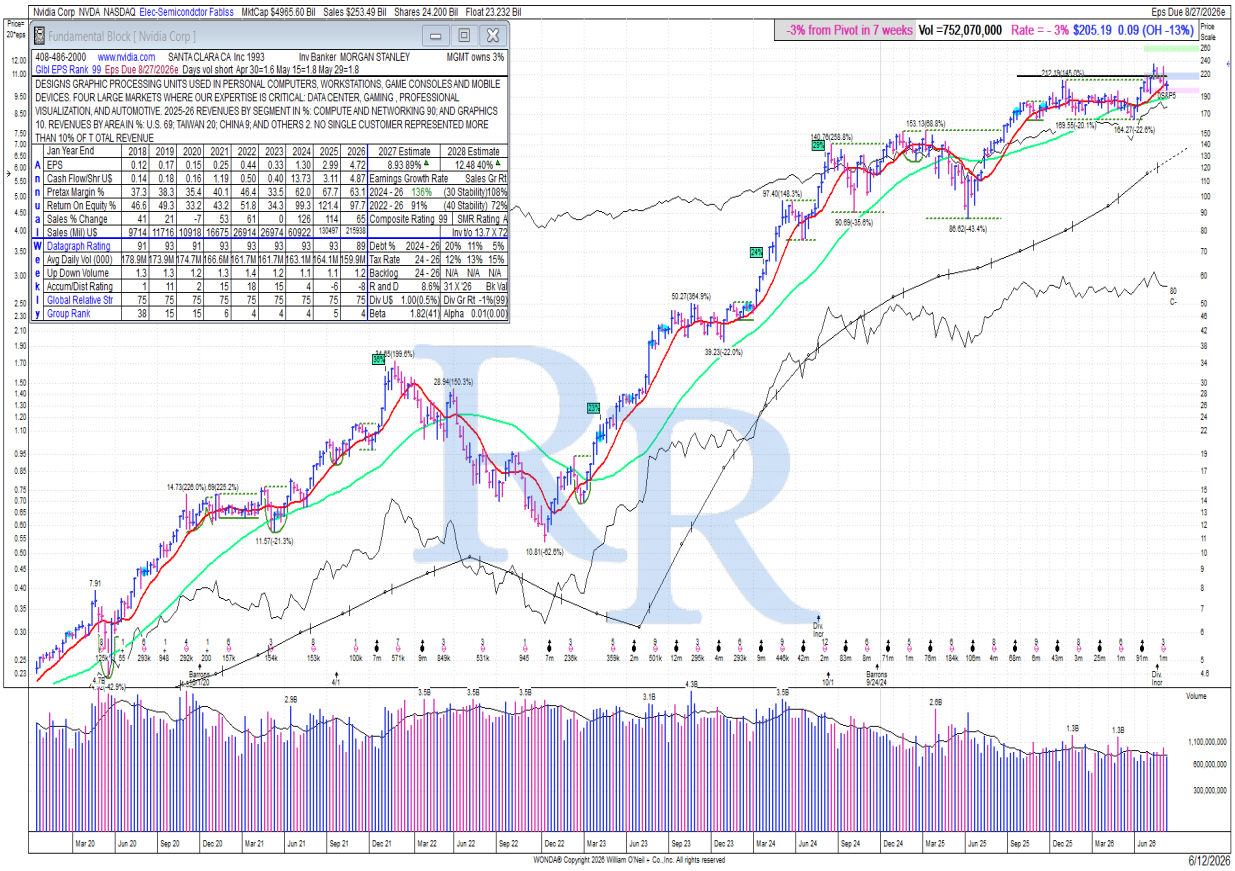
NASDAQ: It has fragile support at the 50DSMA for now but has lacked a dramatic volume spike as it starts to break its ST downtrend. If, if, if it can get above the 21DSMA and hold after next Thursday's close, I will feel more confident in the durability of any continuation uptrend.



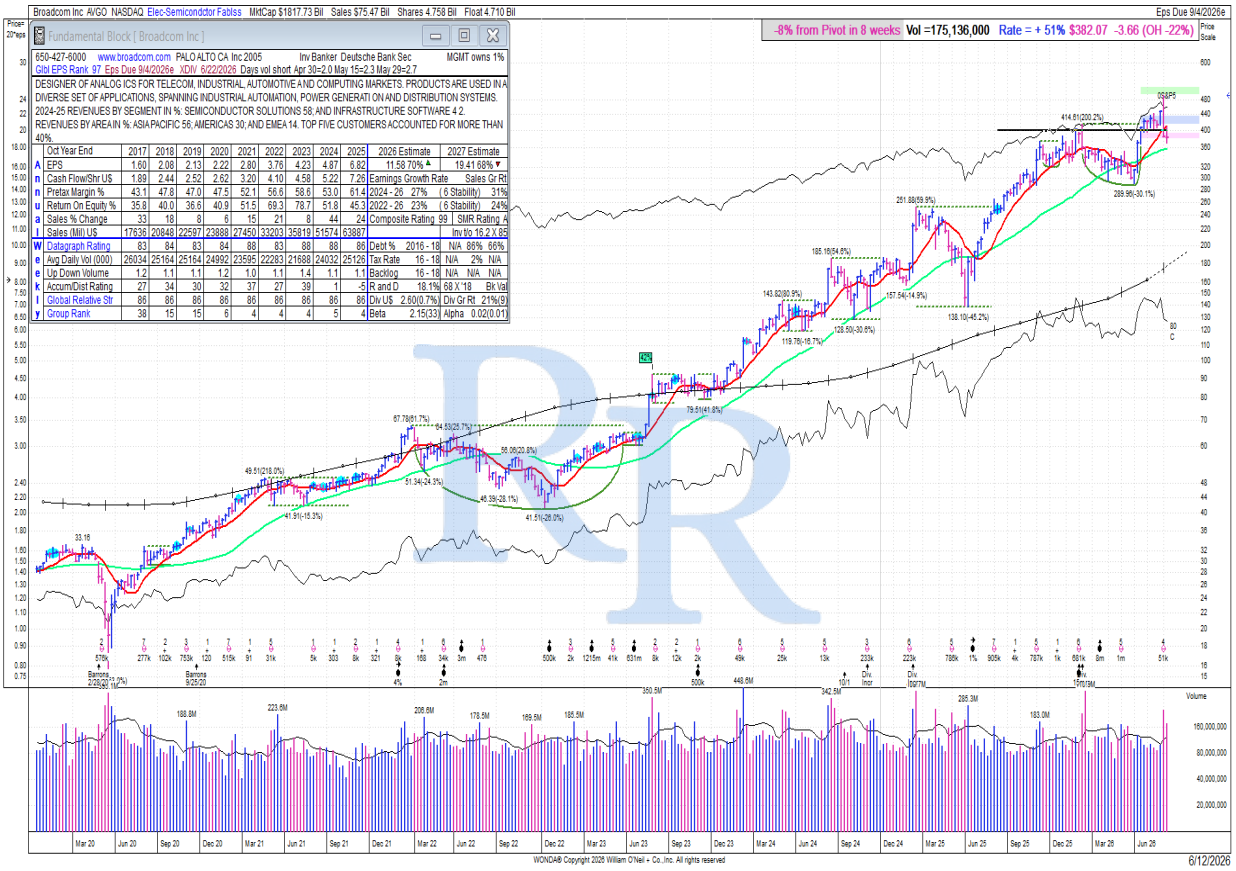
SMH is astoundingly resilient. Everyone, including me, is anticipating a meaningful digestion or worse. But it looks like it's catching support at what I used to call "rare air"-the 21DSMA. It's a testament to the power of the AI revolution. At some point, SMH will test the 50DSMA and much lower, but that looks farther down the road for now.



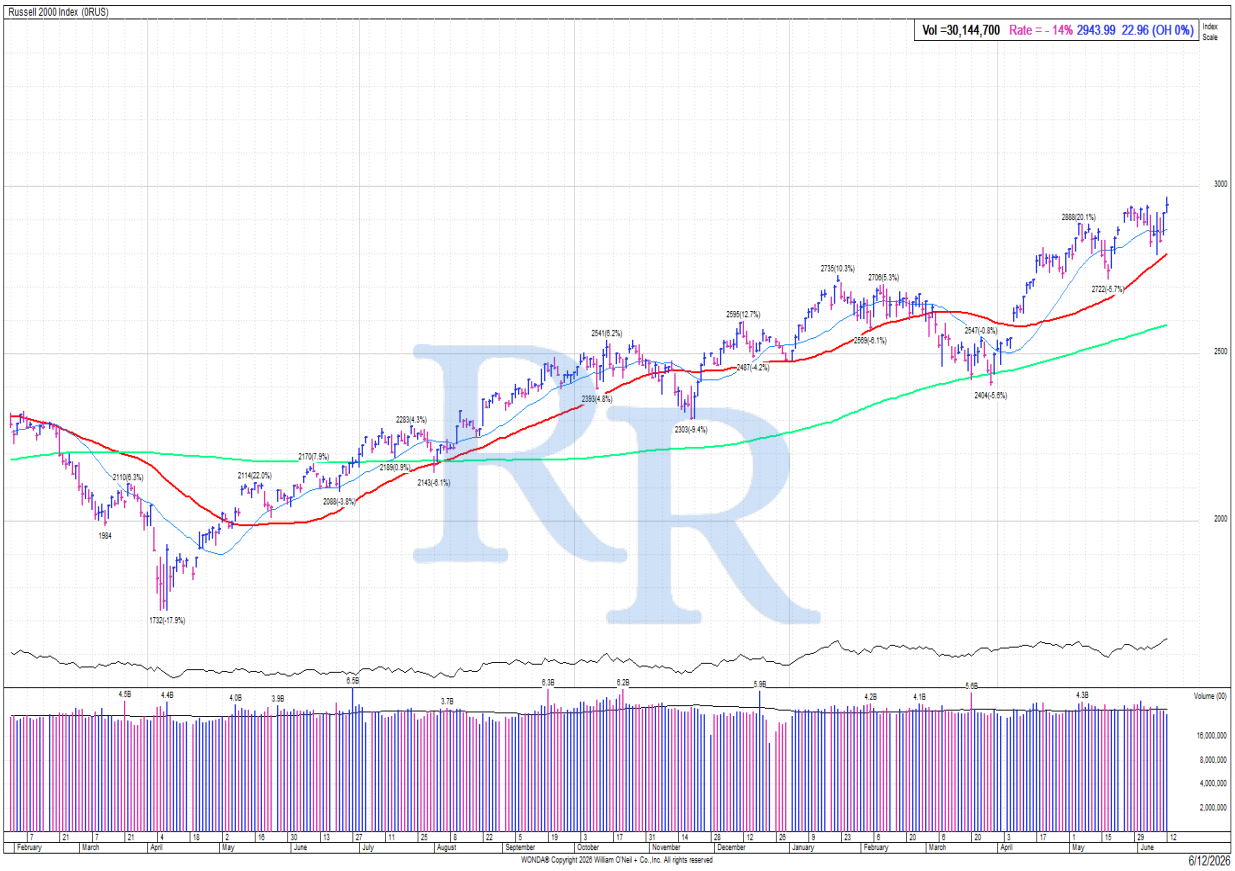
SNDK says: "This bull run is NOT over." Bill told me dozens of times; leaders go farther than most people believe possible, and that they can go a long way without breaking the 50DSMA. What's unique about SNDK is that after two climax runs, it's running again. SNDK is truly a *superstock* TML for the record/model books. If I were only looking at SNDK, I would say it's a max-long moment, but my age and experience tell me to tap the accelerator, but with caution. Once again, it's extended and possibly the biggest bullish clue in the whole market.



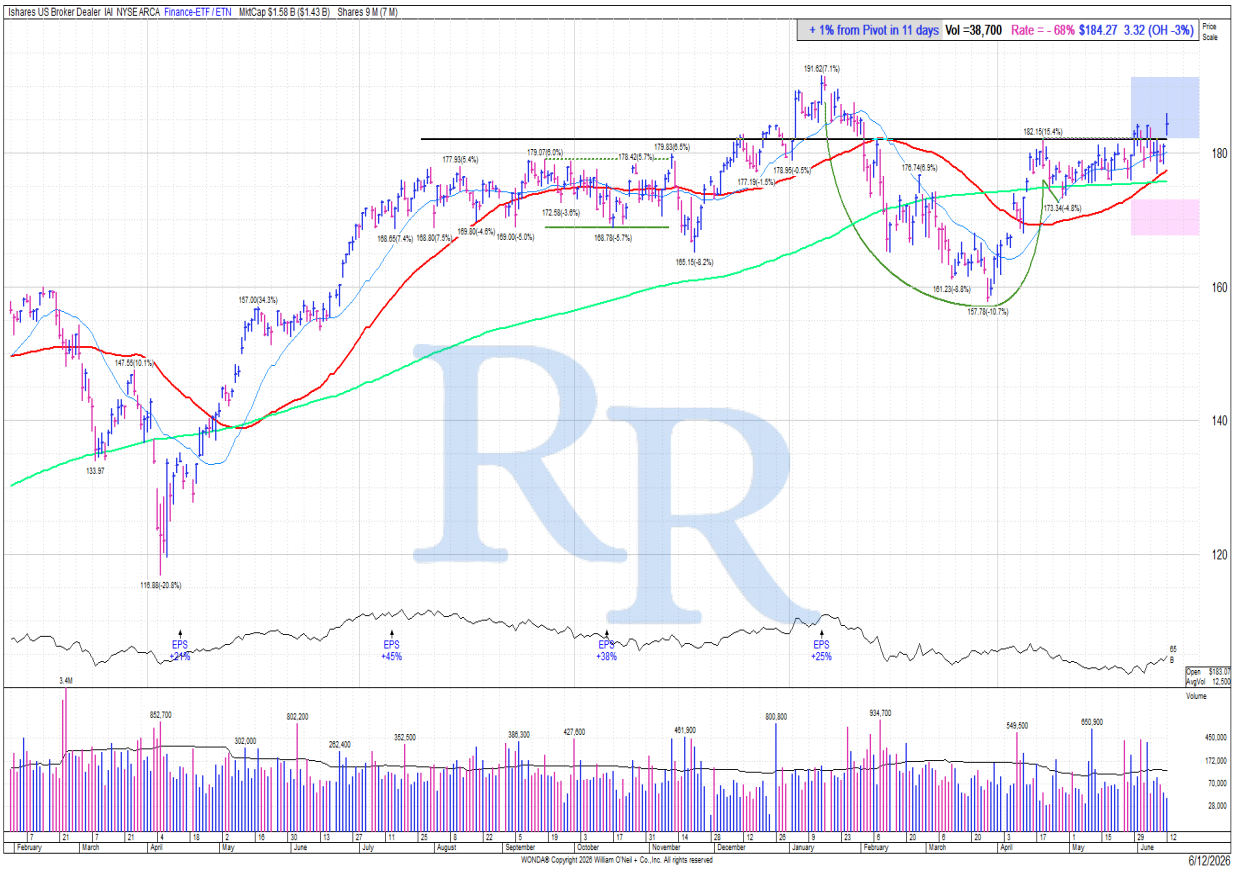
NVDA is the JPM of AI; it's a critical, key leader in this space. It does not have to go up for the general market to prosper, but it can't start a bear trend.



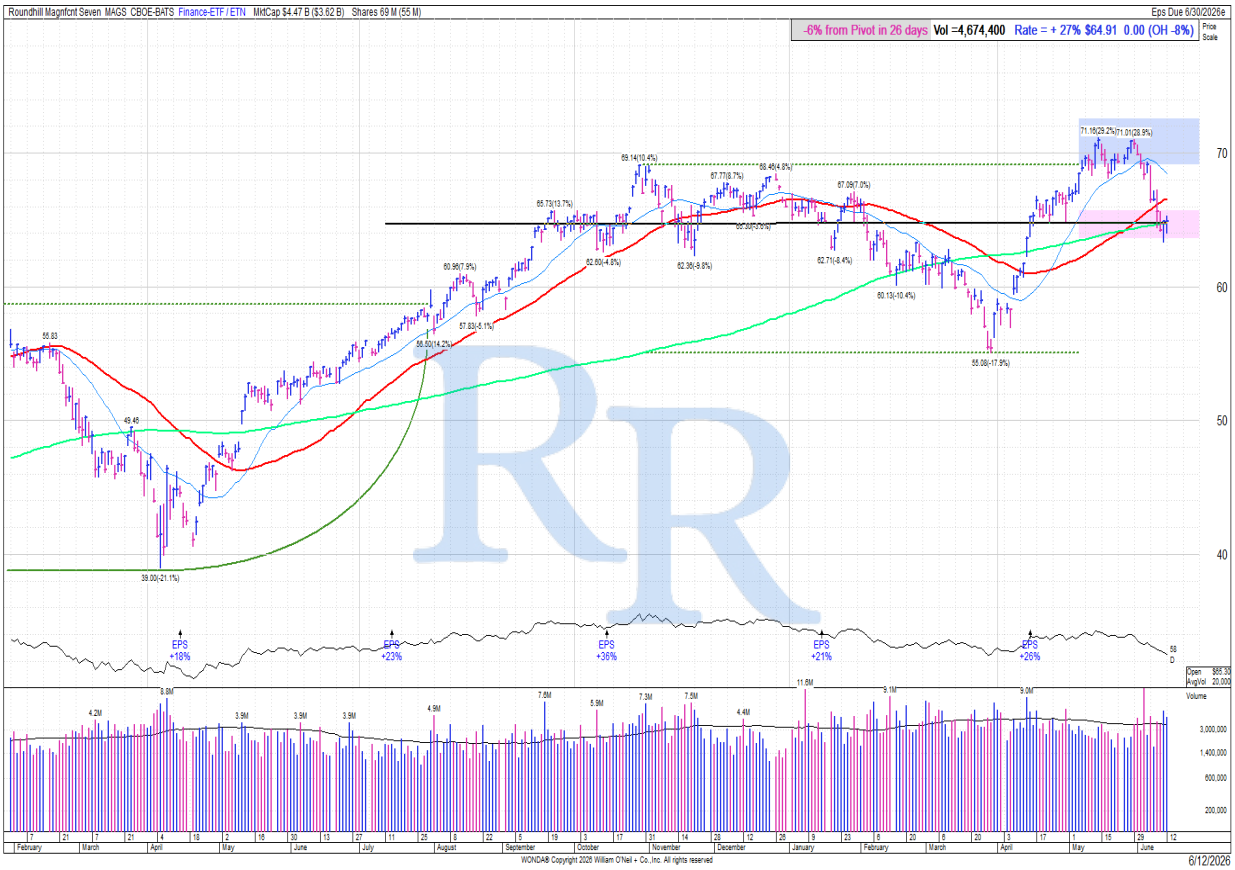
AVGO: There will always be a bogeyman to keep you from participating in bull runs, and AVGO is not acting healthy. But the preponderance of evidence says it's time to be bullish. Over the course of this 20–30-year bull run, there will be several -20%, -30 % bear markets. The bears will hang their hat on 1 or 2 material negatives and miss all the AI monster beasts that go up +500 to +2000%. Being negative sounds smart but leaves you poor.



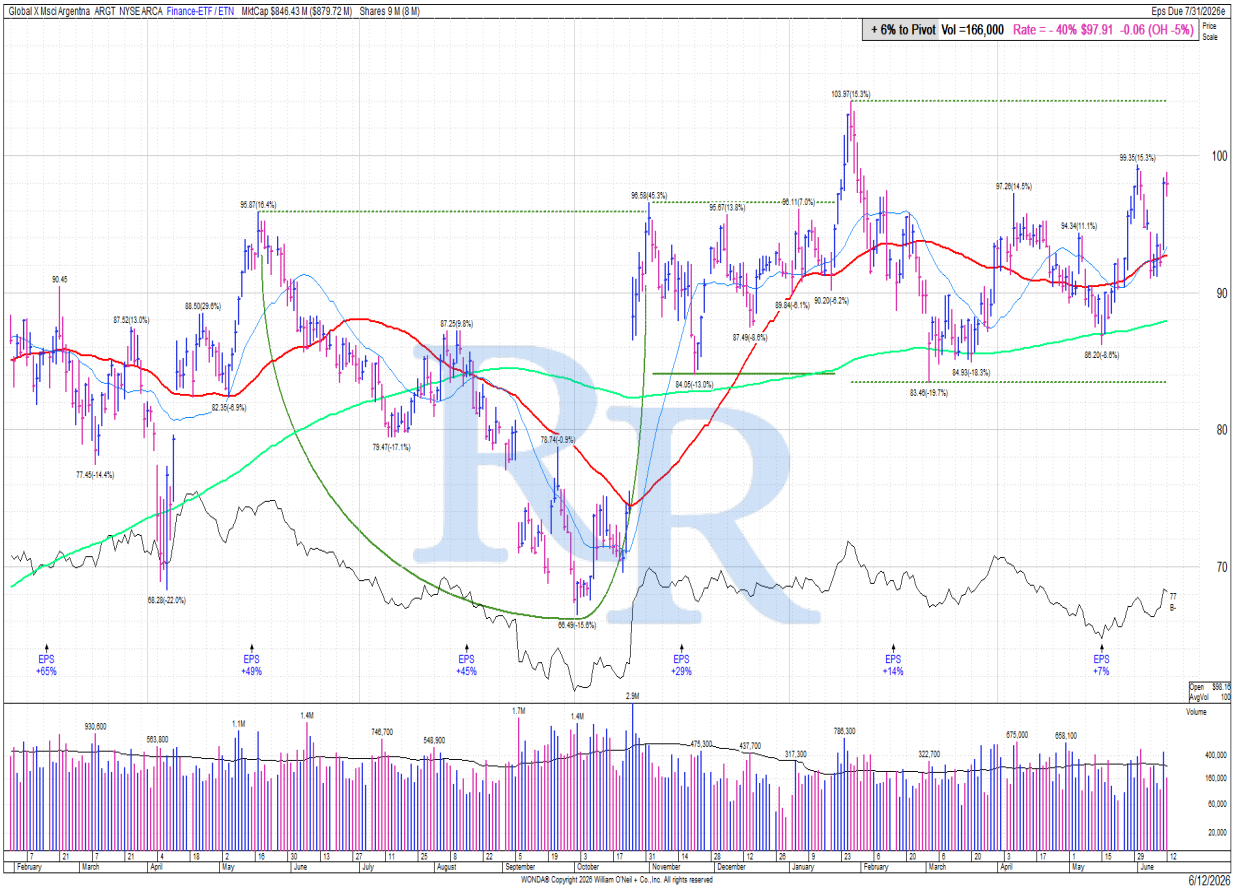
Russell 2000: There is nothing more bullish than a new high, and with 2000 components to this index, breadth is expanding!!!!!!!!!! TNA is a good option for the cowboys.



IAI: Moving over the $184.00 pivot signals that a new move up in the market is in progress.



MAGS: The lack of upward response makes me think the market is moving away from the AI spenders and further into the AI existential arms suppliers. I would use MAGS as a short to hedge my longs when conditions get dicey.



ARGT has been a slug, but Capitalistic reforms and Freedom will eventually make this index rock.

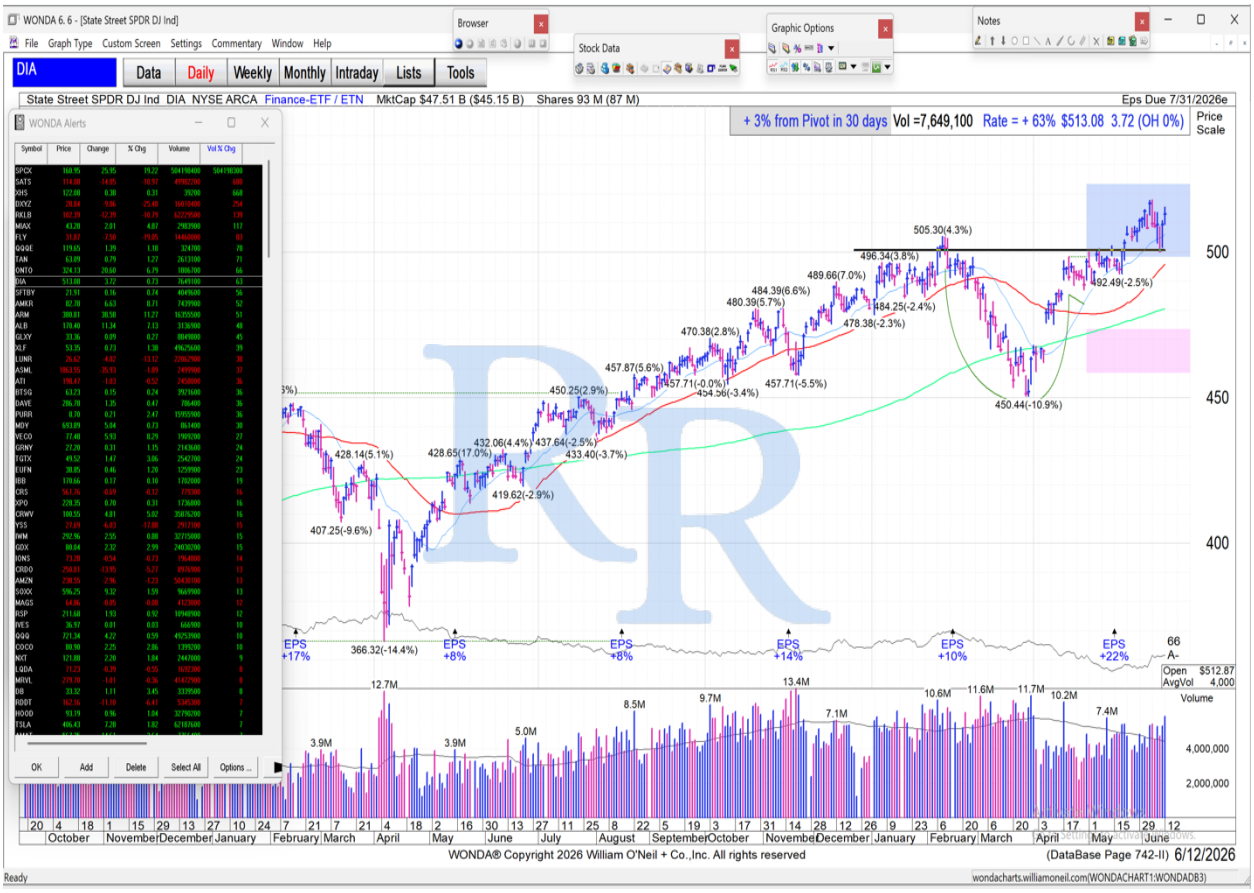
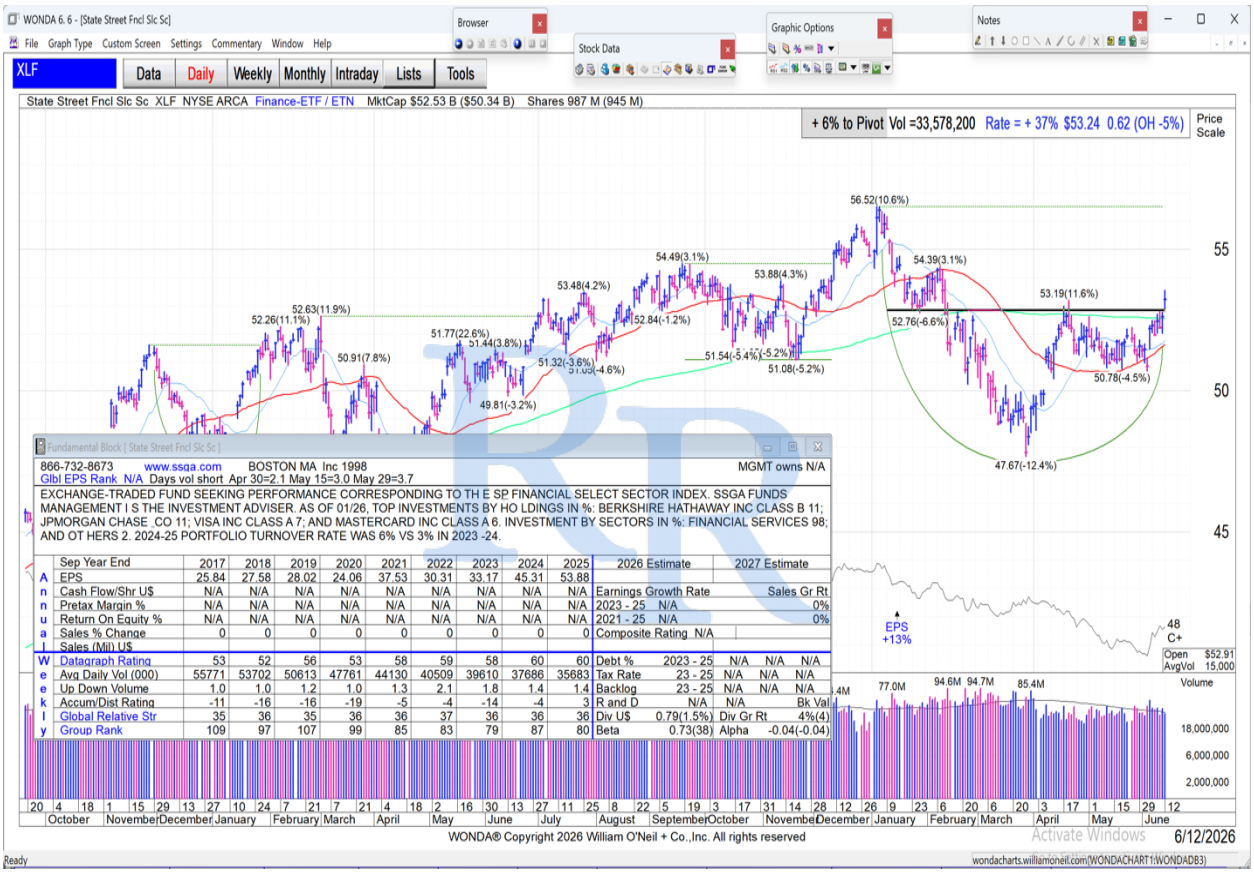
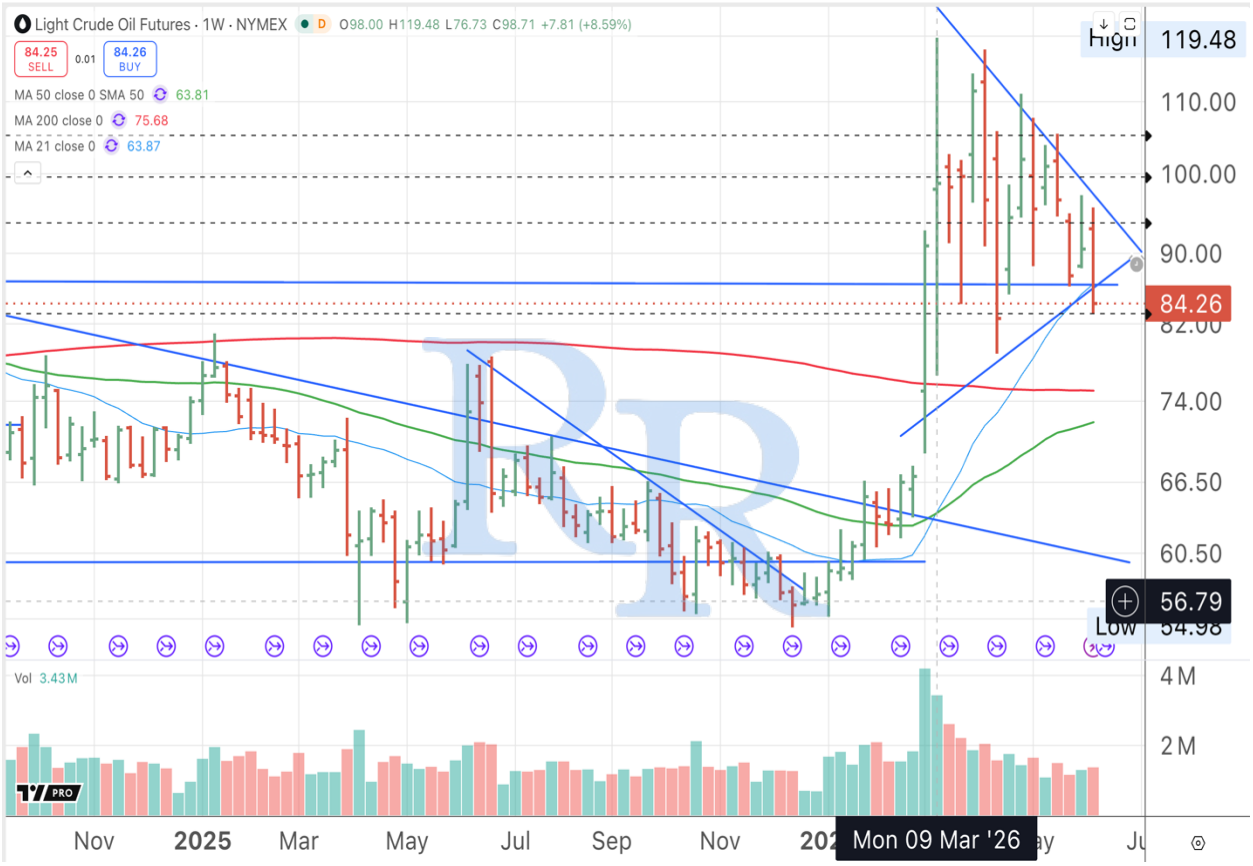
SK Hynix was supposed to be the straw that would break the camel's back in Korea, but it, at least for now, caught support.



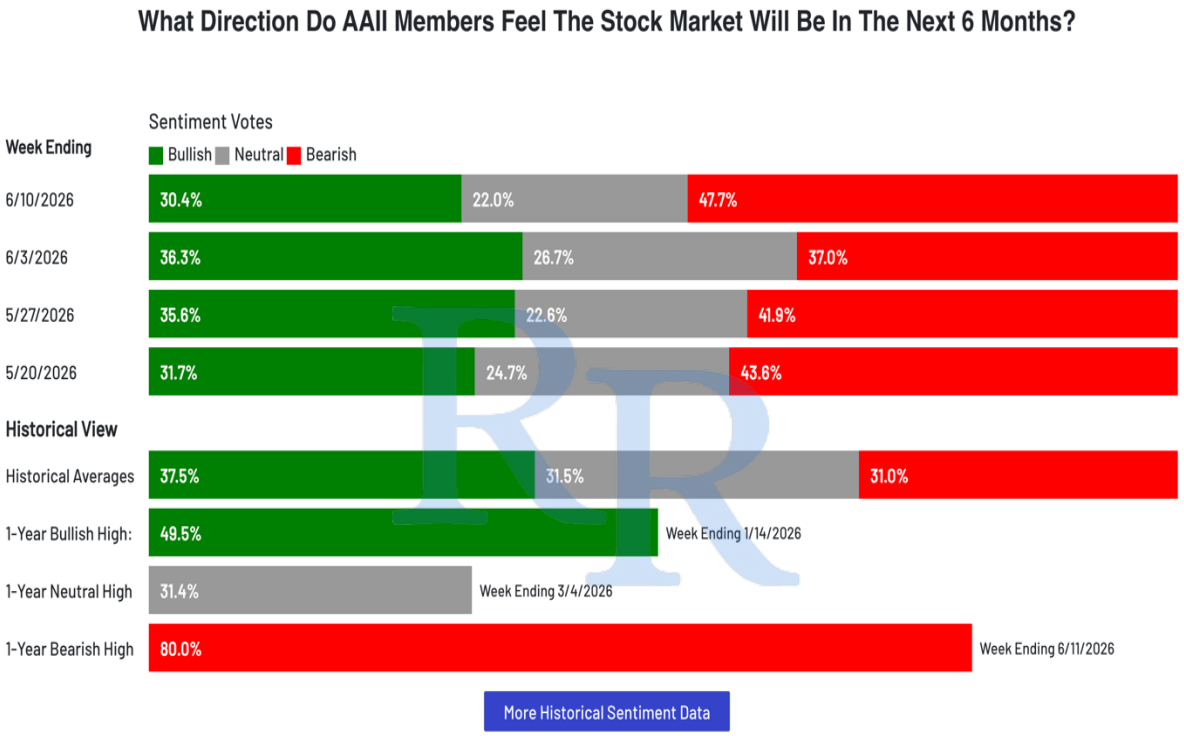
DIA: Base breakouts frequently retest the pivot, especially with large indexes. I suspect a new high is nearby.



XLF emerging over a low pivot says the recent digestion has been a rotation vs. a top. Very bullish.



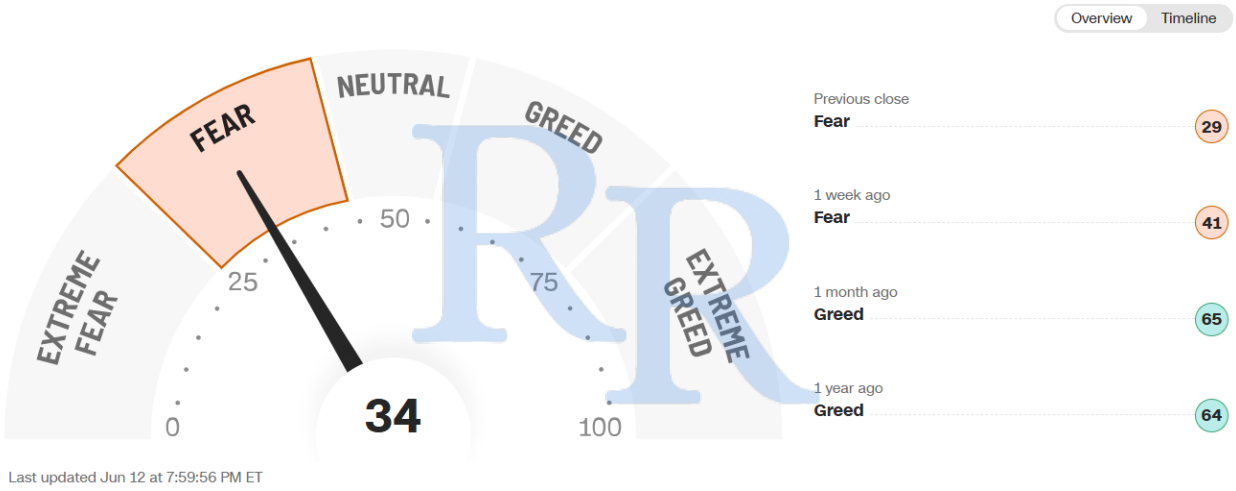
Crude is trying hard to break down. To me, it means the market is starting to believe Trump will score some form of deal with Iran. It will be interesting to see if the Iranians will be giving up their semi-enriched uranium. The cost of eliminating the Iranian threat now will not be cheap, but the inevitable, much higher cost will likely be a problem for younger generations to deal with.



It's stunning that the public remains so bearish. I get the jump higher in bulls last week as the correction deepened, but these readings are what is normally seen at market bottoms. This leads me to believe the current digestion will be short. For this indicator to signal a top, I would need to see persistently more bulls than bears for the better part of a year.

Fear & Greed Index

What emotion is driving the market now?
Learn more about the index



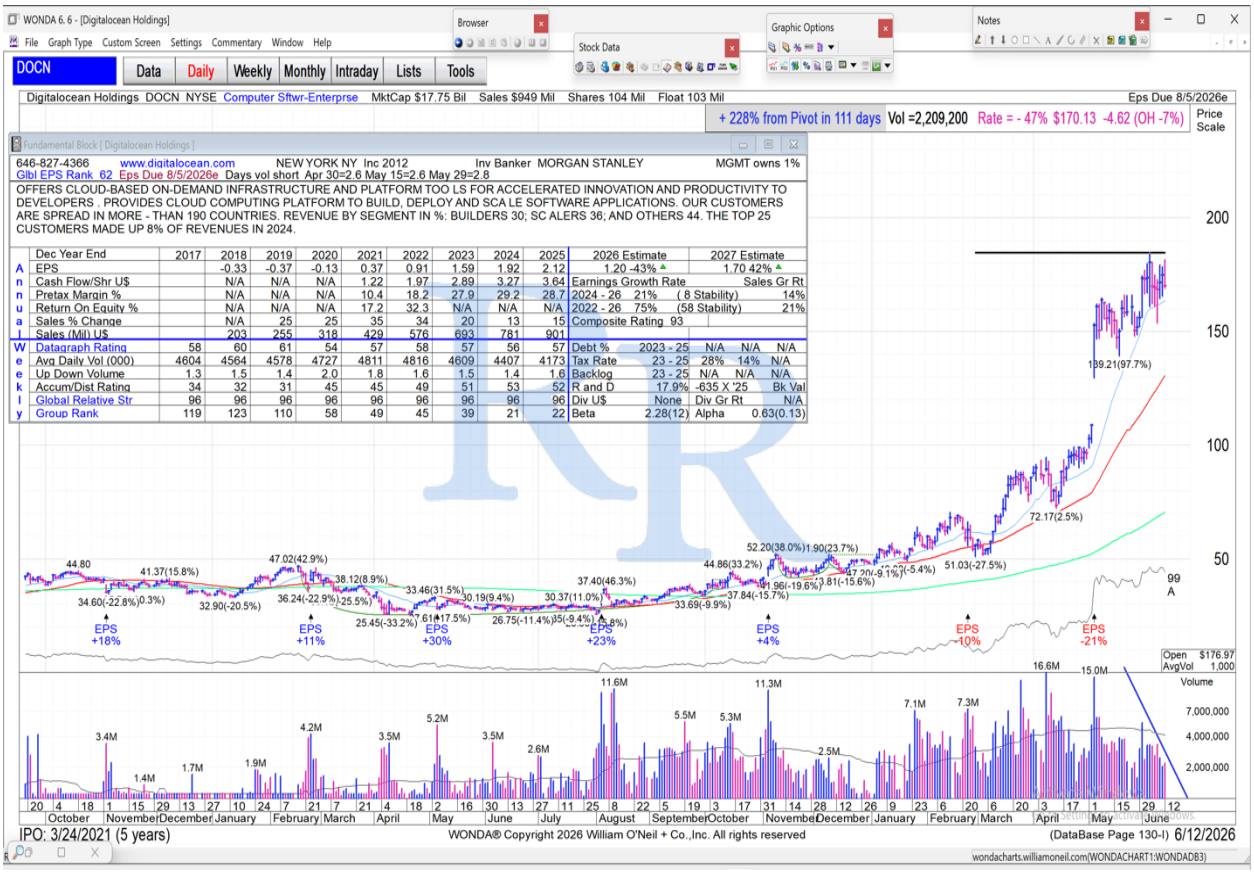
Last updated Jun 12 at 7:59:56 PM ET

7 FEAR & GREED INDICATORS

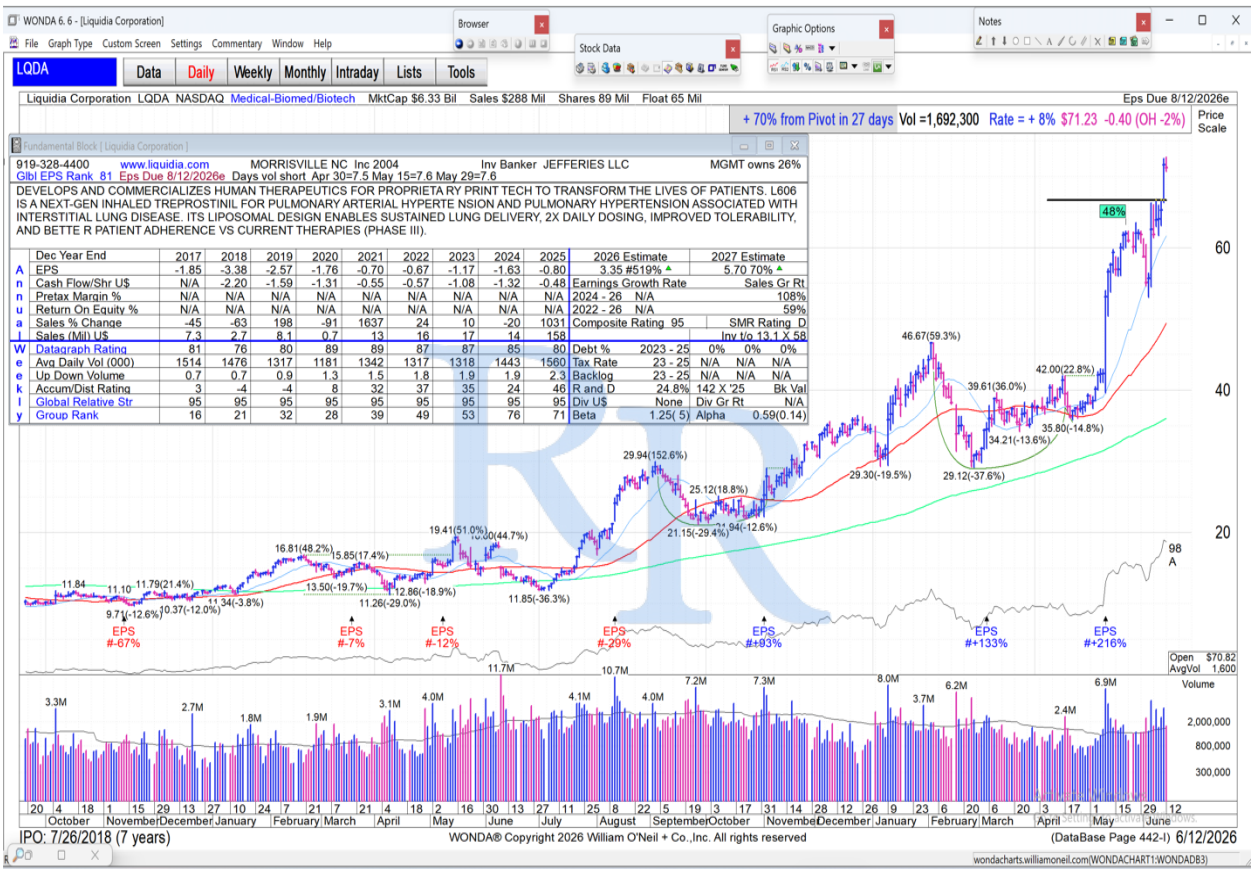
Fear & Greed: I just don't understand the publics fear. But it makes me bullish. I want to buy fear and sell, trim, or hedge greed.

The VIX gave us what I asked for, a break below $18.00. This alone is not enough for me to increase the market temperature to 10, but it's a good start.

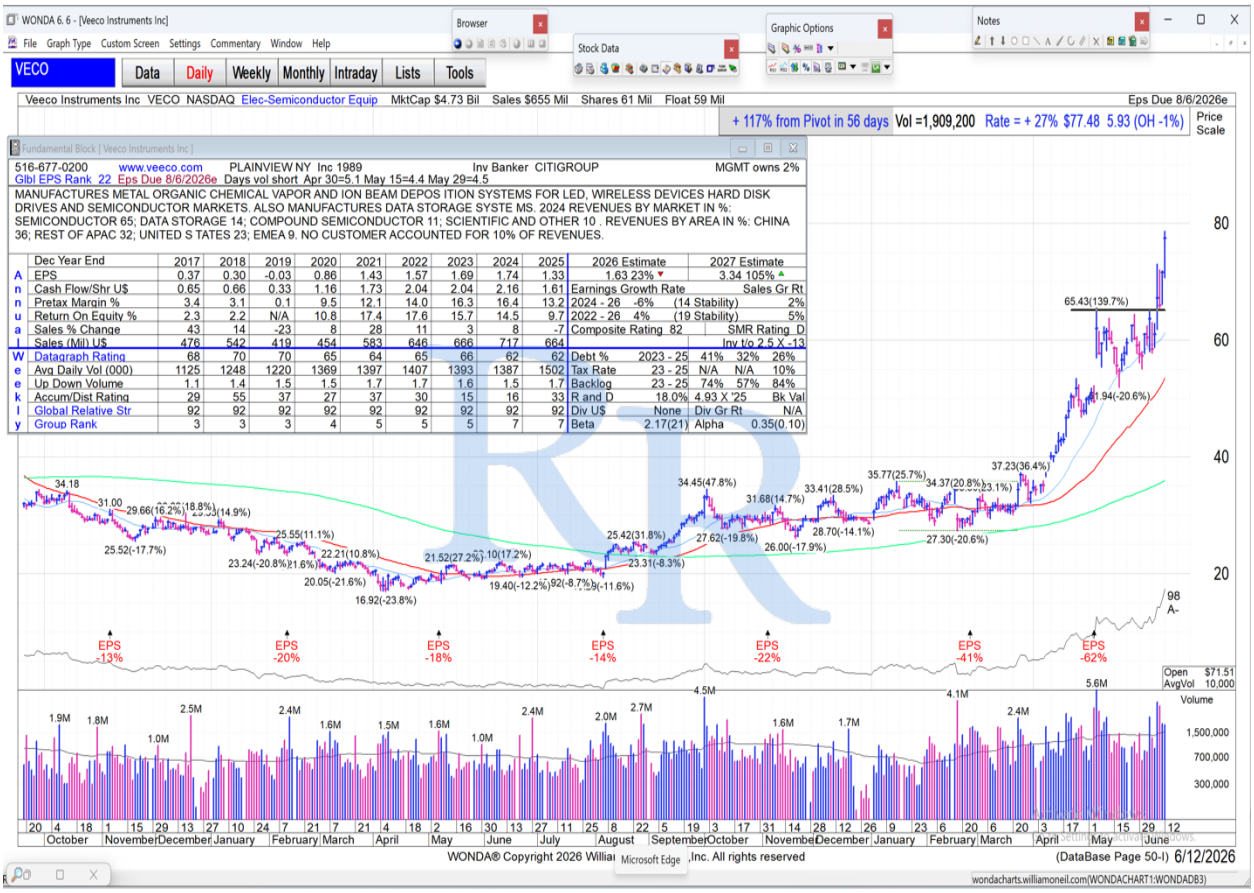
▼ Potential TMLs – Stocks of Interest



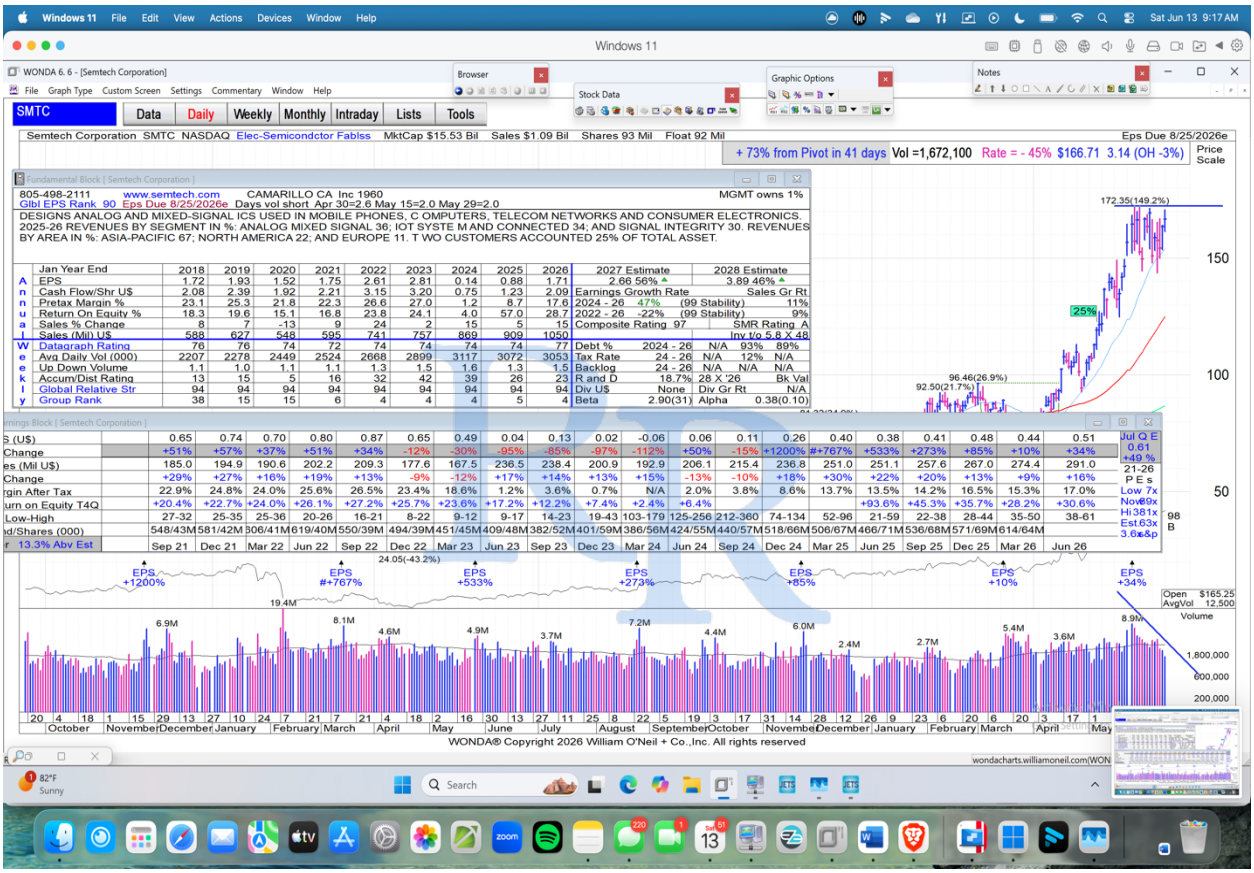
DOCN: I can't say I love this name because the earnings growth has decelerated the last two quarters, but the market likes it a lot more than me. The fact that it held so close to the highs as most names were getting hammered says this name is likely going higher.



LQDA: It's not hard to love this name, as it ripped to an all-time high the day the NASDAQ roared higher last Thursday. And the MASSIVE +519% EPS estimate. Extended for now. Wait.



VECO is another new name that could not wait for the general market to heal before it broke out. Likely a new leader.



SMTC is another new name that has digested on low volume. This would initially be a scalp trade, but depending on the quality of any breakout, it could become an intermediate-term hold.

▼ One of Bill's Golden Rules

Eliminating the worry of day-to-day volatility is the #1 commonality among the best performers. What KILLS performance is getting shaken out before stops are hit, paying taxes, and, worse, short-term tax rates. The Big $$$ is in the sitting.

▼ Random Thoughts

My final thought as I wrap up this report is that I have been too fearful, and nearly everything I have reviewed to prepare this report makes me bullish, except AVGO. I, we, need to weigh our fears at 10% and the trend and support of our leaders at the MA's 90%. As Old Man Turkey would say, "It's a Bull Market," and we need to lean into it.

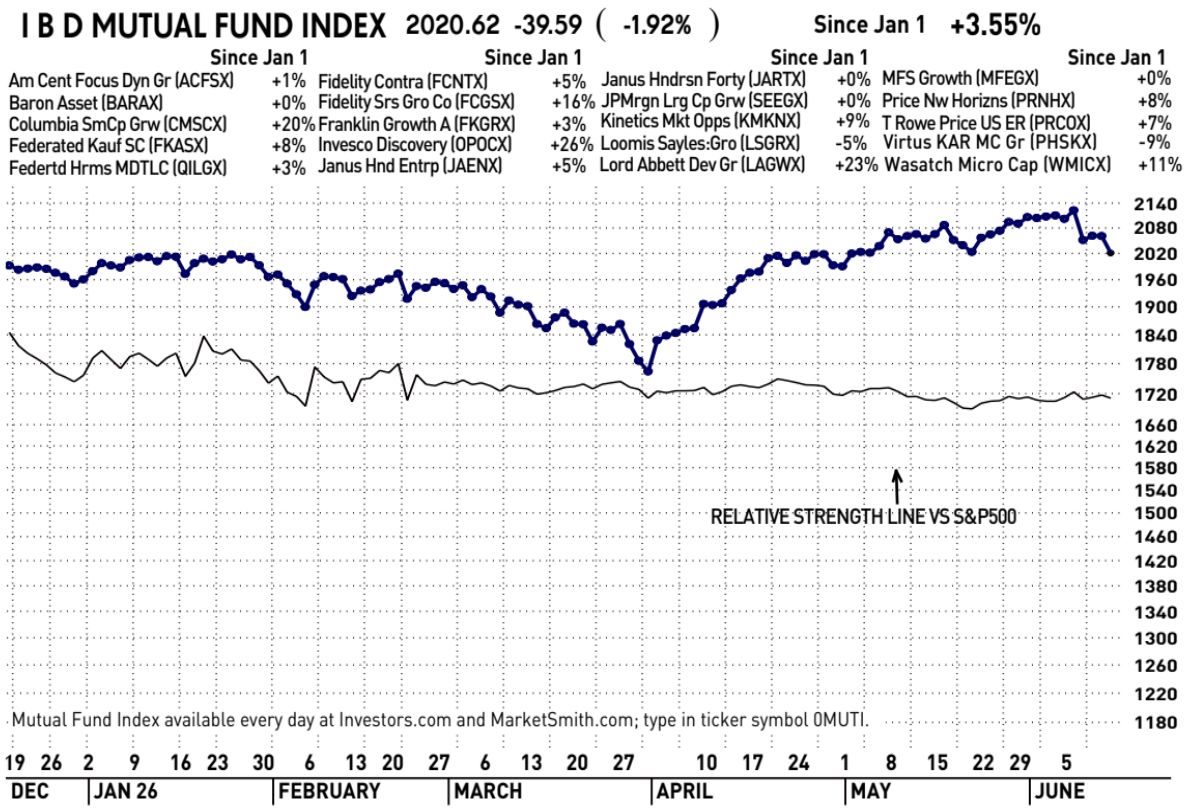
It's very possible that I underestimated the significance of the SpaceX IPO. The need for everyone to raise $$$ to pay for the new shares and to game inclusion in the indexes could have been a major reason for the recent selloff. Regardless, the action in early leaders, a lot of new leaders, and financials brings a general broadening out of participation that makes me BULLISH. The coast is not clear yet, but my buy window is open.

The NASDAQ100 digested -9% over six days, but many quality names, like ONTO, have been digesting for 7 weeks. This digestion has created new bases in several quality names. Corrections are *great* resets that bring us new opportunities.

Mag7 or MAGS is the new IGV. The hyperscalers are getting lethargic as they are spending, while the arms dealers, MRVL, SNDK, ALAB, CRDO, INTC, AMD, ARM, ASML, AMAT, KLAC, AMKR, VIAV, TTMI, etc. are booming. As much as I like/love several of these names, I have hedged or partially hedged several of them because I will be traveling.

Sitting through a digestion is never fun or easy. But it's part of intermediate-term trend following. Getting shaken out is part of the process. I was shaken out of GLW and LITE. I was a little too quick pulling the trigger, but I have been running a lot of exposure, and I am ALWAYS defending my capital base, so I have the capital and confidence to be aggressive when conditions improve.

There are dozens of quality names that experienced volume drying up as the last few weeks' digestion unfolded. There is a reason portfolio managers did not dump these stocks en masse. They generally know the fundamentals cold and refused to puke.



The average fund manager is having a disastrous year, +3.55%, because almost all the performance has come from semis and AI-related, while the liquid leaders of the last decades, the MAG7, have lagged. Diversification is a hedge for ignorance.

This market is more headline-driven than any year I can remember. Even more than Trump's first term. It's my guess that ST scalpers/traders are getting eaten alive. Predicting the direction over the next 24 hours is nearly impossible.

The market has recovered 50% of the recent selloff. If, if, if there is no peace deal with Iran, the market will shake. But I contend that the market remains more concerned with the AI gold rush than Iran.

Shift focus to AI adopters vs. suppliers like LLY. The benefits will accrue to the adopters, as the suppliers will suffer as data center construction slows. The new high list will not let us down. The adoption and benefits will take longer than many think, but Trillions of dollars will be made.

US Government is deeply involved and driving the AI boom. Make no mistake, the current administration is doing everything in its power to make America #1 in AI and all leading tech industries. It helps that nearly all cabinet members have been incredibly successful in the real world!!!!!!!!!! LFG, American Exceptionalism and the Golden Goose are on full display in the White House.

FOX NEWS
4:15 ET

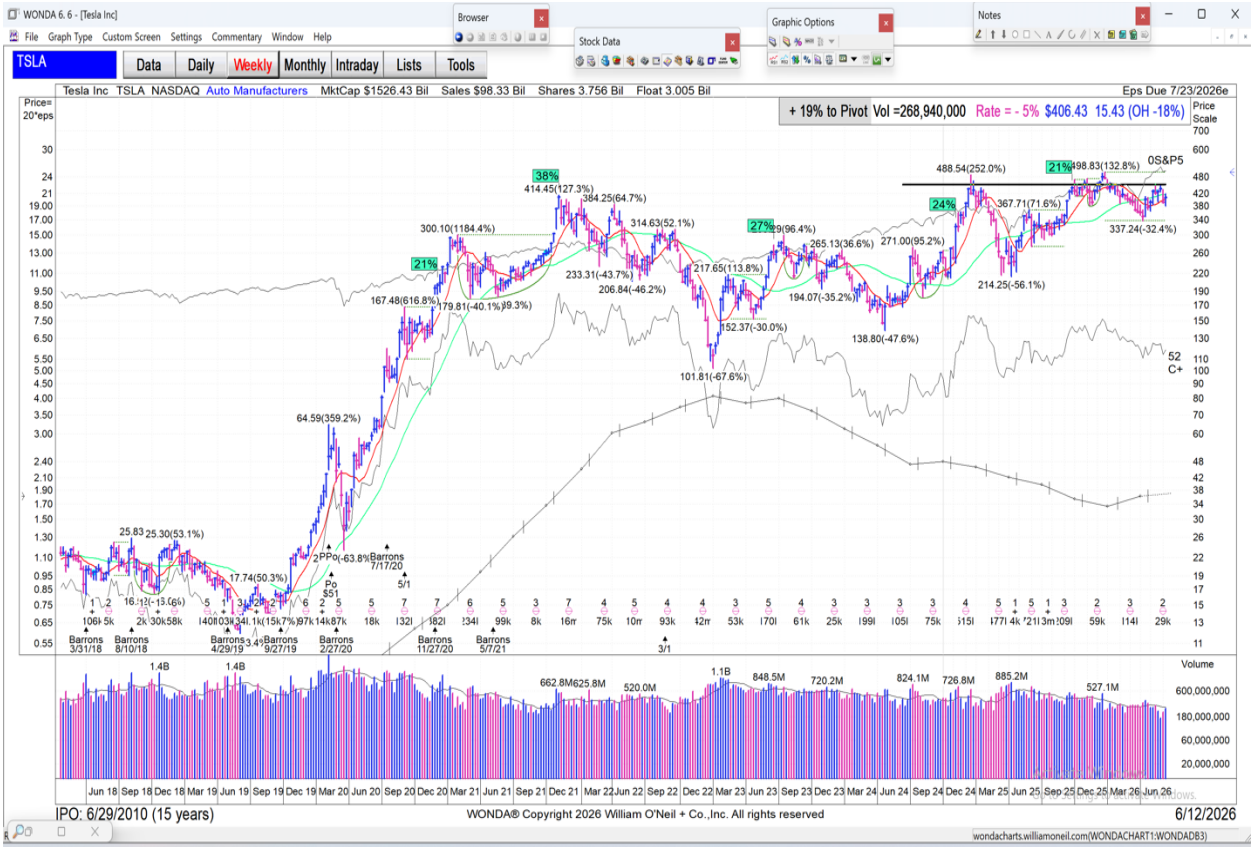
The rise of AI luddites is accelerating; pushback on datacenter construction and fears over AI implications are festering issues to monitor.

I think the impact on physical labor jobs will come from robots, but this is down the road a bit.

The three major indexes still have A/D of B or better, so the recent digestion was not overwhelmingly distributional.

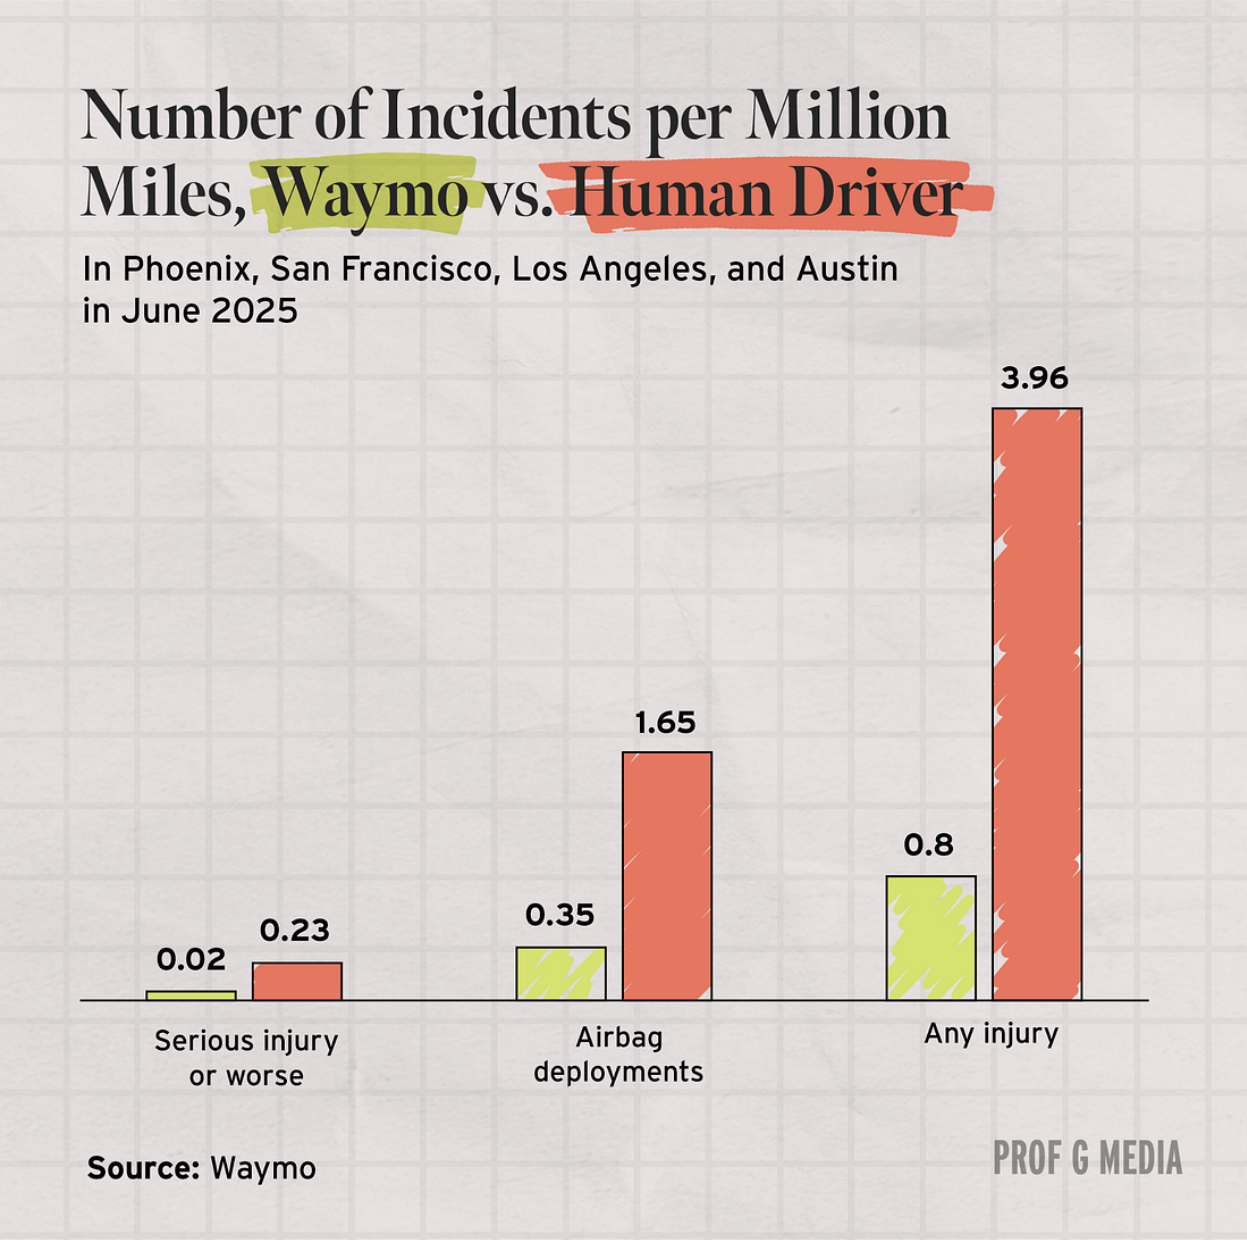
Regarding AI and investing: The only thing I know is the new high list 100% MUST capture the best stocks all the way up. Also, staying long when indexes and positions are above the 50SMA and out when below has made me rich and kept me in the game for the last 40 years. AI is not necessary to follow those rules.

I believe that the more the current digestion corrects, the better the quality of the bases it will create. So, we should be hoping for 8 plus weeks of correction/digestion.



TSLA is currently a slug with an RS of 52, but the information below tells me that, at some point in the future, TSLA is going to be a star again. None of my opinions matter until TSLA emerges over $500.00. I waited for gold for 2 years to set up properly. Patience is a critical component of successful investing. Most people want to make money NOW, and it leads to losses.

*Every year, more than **36,000** Americans die in car accidents. Compared with human drivers, Waymo's autonomous vehicle (AV) technology results in **92%** fewer serious accidents, suggesting it could prevent many of those deaths. But after a year of the company operating eight cars with zero accidents in New York City, **Mayor Zohran Mamdani** let Waymo's testing permit expire anyway. When asked why at a press conference, Mamdani made his position clear:"Look, if a company like Waymo finds itself in New York City, what they will also find is a City government that is committed to delivering for the workers who keep the city running, and those workers also include our taxi drivers who, for far too long, have been sold a dream of being able to work their way to the middle class, only to have the rug pulled out from under them."*



https://en.wikipedia.org/wiki/Luddite?utm_source=substack&utm_medium=email **Mamdani** is a Complete IDIOT!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!

Q. What's the most difficult cabinet position for a democrat president to fill?

A. The chief economic advisor.

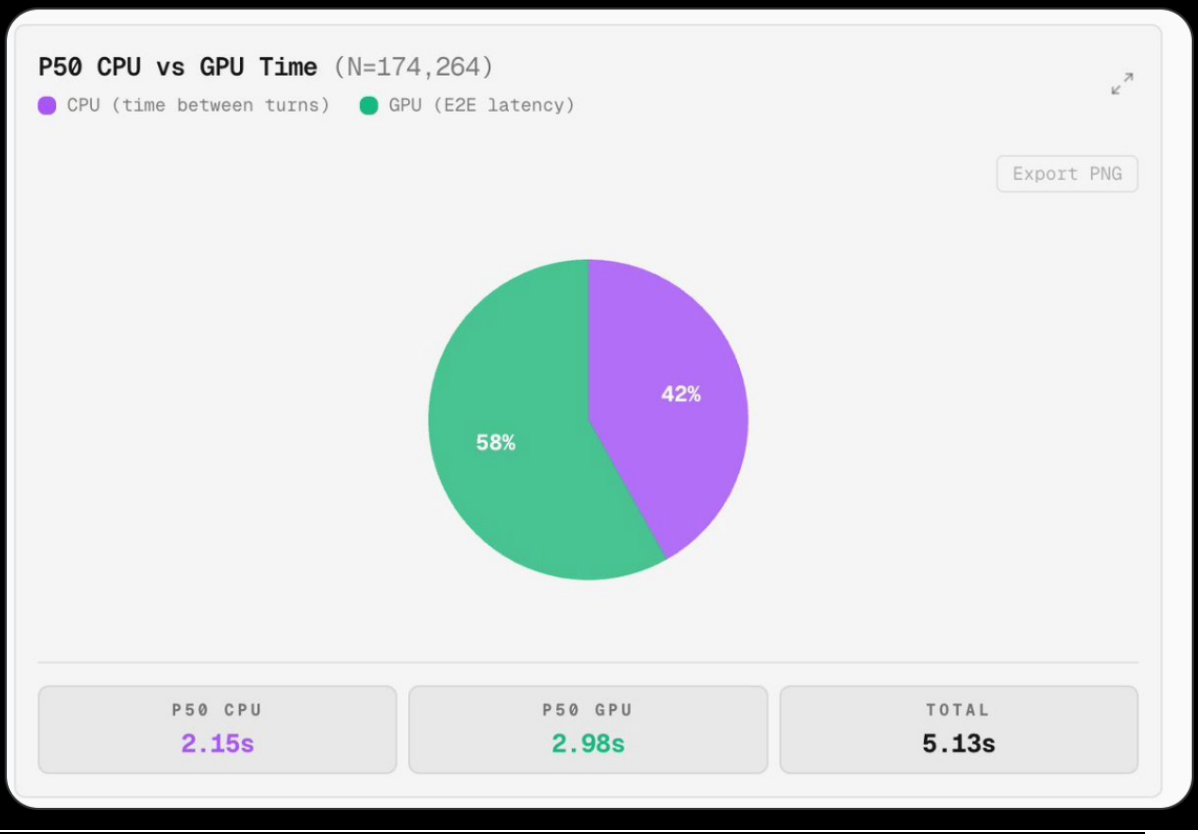
AI is the whole market. So much so that AI buildout spending is expected to top 90 TRILLION USD; that has gang tackled not just the markets but the economy. AI dwarfs everything else, and it's expected to continue at least through 2030.

I am absolutely convinced AI is rapidly accelerating new drug discovery, and over the next several years, there will be many mornings when we wake up to results that cure large Total Addressable Market diseases, such as many forms of cancer. This will cause individual stocks to soar HUNDREDS of percent and the whole biotech space to ramp as the possibilities become reality.

Iran shows no signs of giving up its nuclear ambitions, and the US is unlikely to put boots on the ground. This is why I am not giving up on crude. Unless it takes out $86.00.

SemiAnalysis
@SemiAnalysis_

FACT ALERT 🚨 : In modern agentic coding, 42% of the time is spent on CPU doing tool use such as editing files, running Bash scripts, running lints, etc. The economy of traditional cloud computing charges at $ per cpu core. In the economy of agents, the business model is $ per token thus to increase token revenue, you need to increase the amount of CPUs power u have so that you can generate your tokens.



As late as December 2025, the consensus view was that Micron would deliver about $18.25 EPS. Five months later, with some early data to help them, the median view is now about $58. So what was the point of the $18.25 forecast? Do these well paid equity analysts add any meaningful Alpha

Jevon-it!

When token pricing cools, token consumption cooks

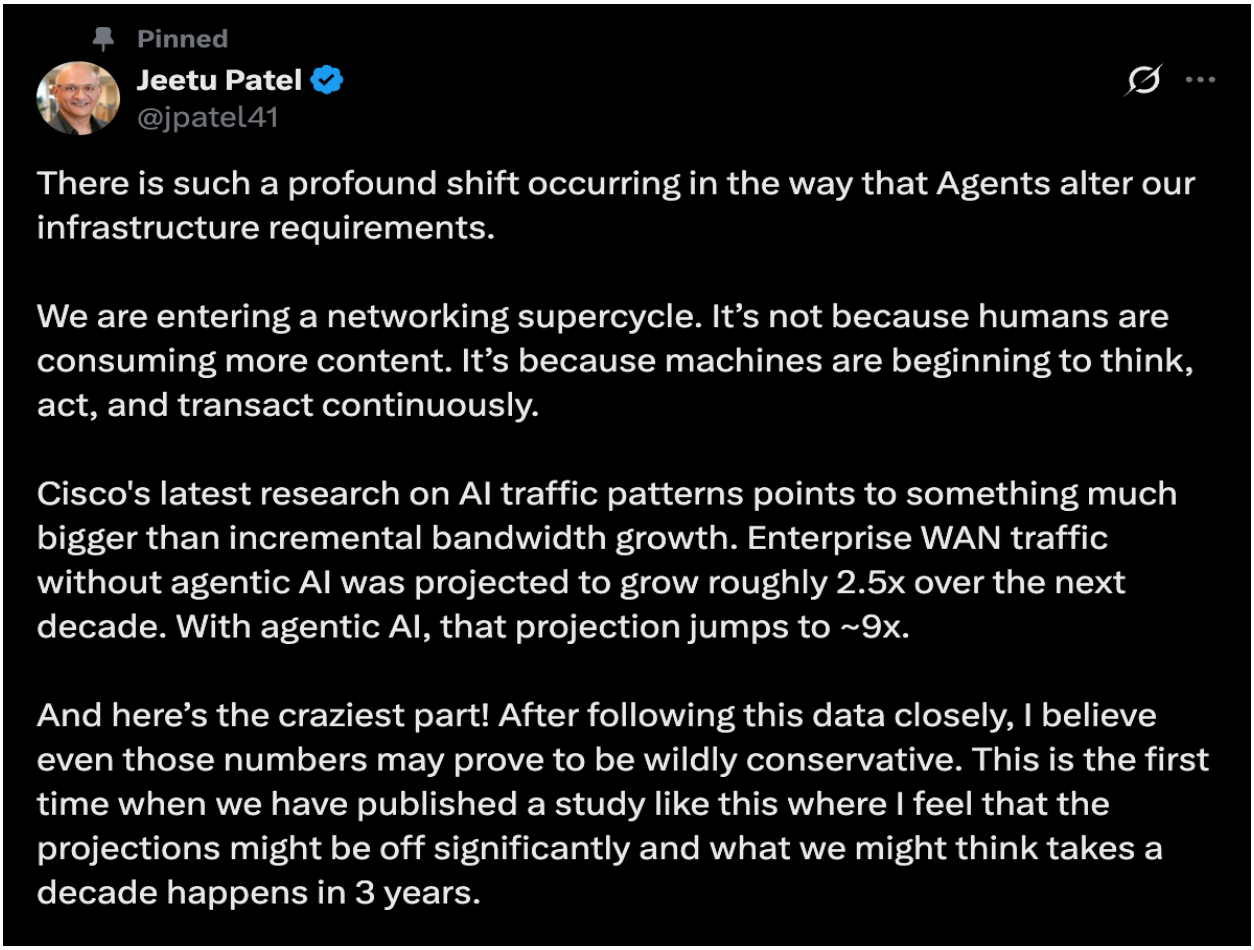
A16Z



CRDO (Curtis, Buy, PT: $270) *Franchise Pick. Co. reported strong 4Q26 results last night, beating on both revenue and margins. We note that the AEC story remains on track, but we see the growing optics business as the key driver into next year. We flag that the F27 optical rev. oppty is now $600M+, up from $500M, and see this ramping to $1.2B by the end of the fiscal year. This is underpinned by the recently closed DustPhotonics acquisition, which shores up the silicon photonics roadmap and extends the path to 3.2T. We raise our estimates and PT and continue to model F27 & F28 revenue ahead of the Street.*

Curtis – Franchise Pick – Credo (CRDO, BUY, PT $270) Optics Business Adds Substantial Second Leg - *The AEC story remains far from over, but the Optics business is the real driver into next year. F27 Optical revenue guidance moves to $600M (from $500M) and should more than double in F28. Our bull thesis from our initiation remains intact, and we expect continued acceleration into F28 with our upside case of $13 EPS in C28 providing a compelling valuation.*

CrowdStrike (CRWD, BUY, PT $760) CRWD F1Q Earnings: Even Lebron Needs a Breather - *F1Q ARR growth of 24.2% yoy accelerated for 3rd straight Q although the beat of ~$6M vs cons was much less than the typical $15-29M seen the past 4 Qs. This coupled with elevated expectations due to the 97% rally since Apr 10th pressured shares AH. That said, F2Q/FY27 ARR guides were significantly better than expected (lends hope that the acceleration story can continue into F2H) driven by SIEM, Identity & the emerging AI opportunity. Remain Buy.*

D-Wave Quantum (QBTS, BUY, PT $45) Analyst Day Shows Credible Roadmap, Rising Commercial Traction - *QBTS showed a more credible path to scale, pairing near-term annealing use with a fault-tolerant gate-model roadmap. Rising interest across various end-markets plus U.S. government/CHIPS Act inclusion adds validation. We think QBTS remains underappreciated as quantum moves toward enterprise deployment globally.*

SNOW, DDOG, PCOR, TEAM (Thill, Buy) *We highlight key themes from our '26 Software, Internet & AI Conference. We point out that while the tone on software was more positive than the stocks reflect, AI remained the overarching theme, with winners being those on the "token path". We believe this supports our preference for hyperscalers, cyber, infra and select apps. We believe that the surge in AI model use is increasing need for observability, security and crucial components such as data lakes and databases. This should benefit the likes of SNOW and DDOG. In apps we see small pockets of positivity in platforms, verticals (PCOR) and mainstreaming of coders (TEAM). We are hosting a recap call at 11 am EST.*

Snowflake (SNOW, BUY, PT $300) Going Cuckoo for CoCo - *We attended SNOW's user conf & A-day in SF and came away with higher conviction in its AI monetization opportunity via CoCo (SNOW's coding agent). Multiple checks suggest CoCo outperforms 3P agents on SNOW data and is already driving expansions even for core SNOW workloads. If SNOW can execute on embedding AI into its GTM, we see significant upside ahead and believe valuation has multiple support at 12x CY27 rev vs. DDOG at 17x. Buy, $300 PT implies 14x.*

AVGO (Curtis, Buy, PT: $550) *Company reported F3Q results last night that we found solid, though mixed relative to expectations. Encouragingly, AI revenue continues to scale rapidly, with order visibility extending into '28. That said, July guidance for AI rev. fell short of expectations, largely due to the Anthropic shift from racks. Gross margins also remain a key debate as the mix shift to ASICs likely accelerates in 2H, with higher HBM pass through pricing representing a potential additional headwind over time. Still, OMs should still improve as AI revenue accelerates. We continue to find the broader AI growth runway compelling, with META and OAI expected to begin ramping next year and initial C28 reads pointing to another strong year of growth.*

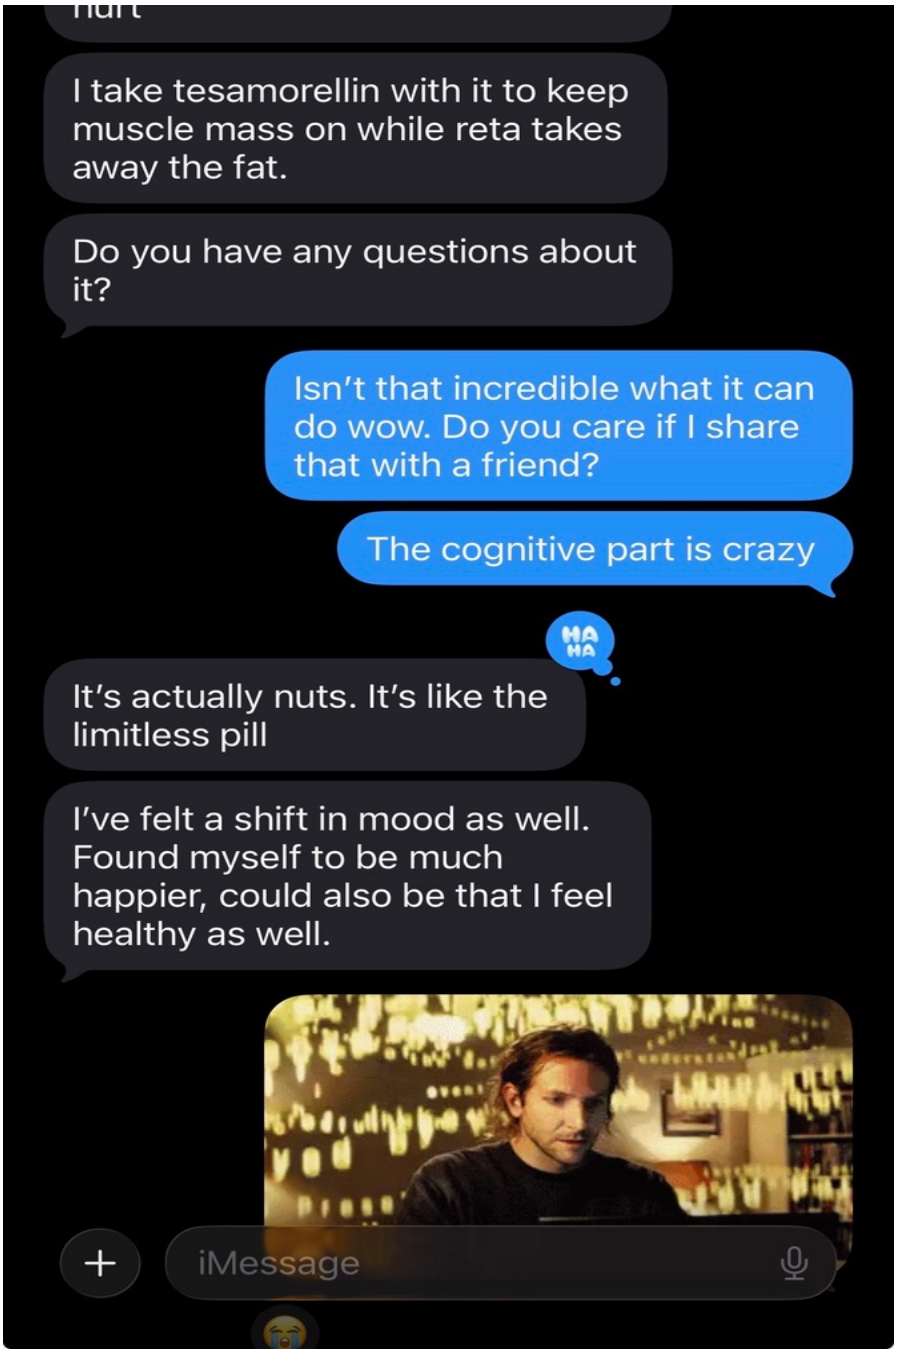
They should make Reta that lets you drink and drive
we were doing some research on Reta so I just wanna share with someone
Delivered
My experience with Reta has been great. I've felt a boost in energy and confidence and I've been running it for about 2 months now. I've lost about 9 pounds but I'm taking smaller doses so I don't get severe side effects. The biggest difference I have felt and it could be in my own head but I feel as if my cognitive performance has increased immensely as well
Liz has been doing heavier doses for me the last couple of months and she has lost a lot of weight, it has however shrunk her muscles a little bit and after she takes the shot she gets a little light headed, nauseas, and her legs hurt
I take tesamorellin with it to keep muscle mass on while reta takes away the fat
iMessage



I take tesamorellin with it to keep muscle mass on while reta takes away the fat.
Do you have any questions about it?
Isn't that incredible what it can do wow. Do you care if I share that with a friend?
The cognitive part is crazy
HA HA
It's actually nuts. It's like the limitless pill
I've felt a shift in mood as well. Found myself to be much happier, could also be that I feel healthy as well.
iMessage

Hey Tom, hope this message find you well. Saw the Reta post. I was entered into the trial and was in and out in ten weeks. Lost 30 lbs in ten weeks, cleared my fatty liver disease, dropped my A1C to 5.2, clear my metabolic syndrome, all in ten weeks. Have been off since last Aug, gym 3X per week, 3.5 mile power walk 3X per week, healthy food, BMI and body fat below where I was when I exited the trial (dosing). Amazing 3G peptide changing people
lives. You are a young and thin guy, but for other friends and family members hopefully it will come to market later this year or early next. Nonetheless, admire you content and dedication, hope to catch up in Aventura some day. Be well, be blessed.
7:34 PM
WOW that is amazing!

Lilly (LLY, BUY, PT $1330) LLY: Thoughts on Week 7 Foundayo TRx - *Foundayo's 7th wk IMS scripts came in at ~11.7k (IQVIA used best-estimate for this week's script). While still numerically lower vs oral Wegovy's 7th launch wk (~67k), LLY noted it takes time to build awareness for new drug/brand. We see both Q2 & FY'26 Foundayo cons #'s as doable (we model $145M w/ stocking & $1.6B, respectively, vs $136M & $1.2B cons). We expect LLY narrative to shift beyond Foundayo to GLP-1/obesity franchise performance this year.*

Lilly (LLY, BUY, PT $1350) LLY: Thoughts on Reta's TRIUMPH-1 & TRANSCEND-T2D-1 data at ADA - *We got full data from Reta's TRIUMPH-1 (obesity) & TRANSCEND-T2D-1 (T2DM) at ADA. Reta's WL efficacy continue to look impressive w/ high doses achieving Bariatric Sx WL (up to 30% by Wk104). Importantly, with ~19% abs WL at Wk80 & Tirzep like tolerability profile, low dose reta (4mg) could offer a favorable risk/benefit for a broader population. Overall, w/ LLY's pot'l DTC approach, we see sig. upside opp'ty for Reta, & model $15Bn risk-dj PS.*

Eli Lilly climbs as Retatrutide data strengthens obesity platform story (1,164.37 +32.95)

Eli Lilly *(**LLY**) is trading higher after weekend data strengthened the case that its obesity franchise is becoming a multi-asset platform rather than a single injectable-product story. The biggest driver appears to be new retatrutide data showing substantial weight loss and meaningful improvements across obesity-related comorbidities, alongside fresh support for LLY's recently launched oral GLP-1, Foundayo/orforglipron.*

The Kobeissi Letter @KobeissiLetter · 2h

This is absolutely insane:

The SpaceX IPO has now drawn more than $70 BILLION worth of retail orders alone.

SpaceX is raising $75 billion, making retail interest ALONE enough to nearly fill the entire sale.

To put this in perspective, the previous record IPO was Saudi Aramco in 2020 at $29.4 billion.

This means that retail interest in SpaceX is now 2.4 TIMES larger than the total amount raised in the previous largest IPO in history.

As a result, SpaceX has announced that 20% of their IPO will be allocated to retail investors, following through on @elonmusk's vision to democratize the record IPO.

Nothing even remotely near what SpaceX is about to do has ever happened.

Friday will be a historic day.

***Retatrutide stands out**: In TRIUMPH-1, patients on the 12 mg dose lost an average of 70.3 lbs, or 28.3%, over 80 weeks, with 65.3% achieving a BMI below 30 and 33.3% reaching a BMI below 25, reinforcing the drug's potential as a next-generation obesity therapy.*

***Comorbidity opportunity**: Retatrutide, an investigational triple agonist targeting GIP, GLP-1, and glucagon receptors, also showed improvements in A1C, knee osteoarthritis pain, and obstructive sleep apnea, suggesting LLY may be able to broaden obesity treatment into multiple high-value complication markets.*

***Oral GLP-1 support:** Foundayo/orforglipron data showed significant weight loss in women across menopause stages, including patients with type 2 diabetes in ATTAIN-2, supporting the view that an oral option can expand the market among patients who prefer pills over injections.*

***Commercial setup**: Foundayo was FDA-approved and launched in April for chronic weight management, giving LLY another major lever alongside Zepbound and Mounjaro as it works to deepen its leadership in obesity, diabetes, and metabolic disease.*

***Operating support**: The company entered 2026 with strong momentum, having raised FY26 guidance to EPS of $35.50-$37.00 from $33.50-$35.00 and revenue to $82-$85 bln from $80-$83 bln after a large Q1 beat.*

***What to watch**: Investors will be focused on Foundayo uptake, payer coverage, potential cannibalization of injectables, additional 2026 retatrutide Phase 3 readouts, tolerability at higher doses, and how LLY positions retatrutide against Zepbound.*

***Palo Alto Networks (PANW, BUY, PT $335) Clean F3Q w/ Very Impressive F4Q ARR Guide -** F3Q org NNARR accelerated driven by AI/SIEM/SASE tailwinds. While Bears will point to potentially decelerating serv. rev growth (mgmt said stable), the F4Q guide indicates another NNARR accel which PANW has strong visibility into. PANW will also enter FY27 w/ cross-sell synergies, an emerging AI DC story which should sustain Firewall growth & blossoming observability/AI businesses. 40% LT FCF mgn guide was importantly reiterated justifying ROI of recent M&A. https://javatar.bluematrix.com/pdf/h8IlDIJn*

***TWLO (Samana, Buy, PT: $195)** We hosted meetings with the CEO, Khozema Shipchandler, and VP of IR, Rodney Nelson, in Europe and came away incrementally positive. We believe the organizational transformation over the last few years has positioned the co. for renewed success. This transformation has accelerated innovation, improved execution and better aligned incentives at a time when, industry-wide, CPaaS is shifting toward higher-value software layers and multi-product platforms, with attach rates and cross-channel integration driving monetization. Notably, mgmt. emphasized that the growth acceleration is largely execution-driven and highlighted improved GTM productivity, onboarding and platform consolidation efforts. Additionally, we see a large oppty in Voice AI, which has reaccelerated on AI-led automation, introducing a new growth vector. We see room for margin expansion as the co. continues to grow higher margin products, including voice and email. Our 2026 EPS ests are ahead of consensus.*

*BofA Securities upgraded **Intel** (INTC) to Buy from Underperform on higher confidence in INTC's opportunity to help address industry constraints in leading edge wafers/packaging, plus supply into a much larger agentic CPU TAM. See accompanying industry report for INTC's position in the rising server CPU opportunity of $170bn+ by CY30. Overall, they now see the total IDM CY30 EPS power of $6+ vs. $3-4 prior, though execution in both product/foundry remains key. They also point to the recent CDNS '14A node' IP sign-up and Terafab engagements as additional supportive data points, helping build INTC's longer-term visibility in external foundry with a more sustainable IP ecosystem. They raise ests and PO to $135 from $96 prior, now based on a comprehensive IDM valuation of 25x at CY30E EPS power of ~$6.24, discounted back two years, given the longer-term nature of foundry opportunities and a shift from their prior CY28E sum-of-parts methodology.*

***Axsome Therapeutics (AXSM, BUY, PT $380) NYC Dinner - Multiple Datapoints Support a Robust Trajectory in Alz Agitation -** Based on our (+) KOL discussions, we believe Auvelity's combined peak sales in major depression (MDD) and Alzheimer's agitation (AADAD) could surpass $6B+ (or $3B apiece), up from a $610M+ runrate in MDD-only - still conservative vs mgmt's $8B guidance. Ultimately, $6B of sales x 3x multiple (long IP tail) = $18B+ valuation (vs $12.5B cap), making AXSM's late-stage CNS pipeline (10+ indications) mostly call options - raising PT to $380.*

***Internet – AI App Test: Google in the Driver's Seat, Claude and ChatGPT Ride Shotgun -** Our team re-ran a set of 8 consumer prompts across Google Gemini, Anthropic Claude, and OpenAI ChatGPT. Gemini is now the clear winner for consumer AI use cases (3.65 avg top vote across 7 team members), with Claude (1.71) and ChatGPT (1.65) effectively neck-and-neck. The biggest delta vs. last year: this is no longer a photo finish—Gemini's product integration (Maps/Hotels/Search) is translating into repeatable "day-to-day" wins in consumer AI.*

CREATIVE PLANNING					@CharlieBilello		

Check out the forward performance above with the conditions we are experienced in April 2025. The odds are very favorable for IT and LT. Bill would be positioning himself with capital to pounce. Remember, just like in 2024, there will be dozens of stocks that will go up hundreds of percent.

75 years of evidence that prices will be dramatically higher in 12 months. If history repeats, what will it do for your net worth? What did 2024 do for your net worth?

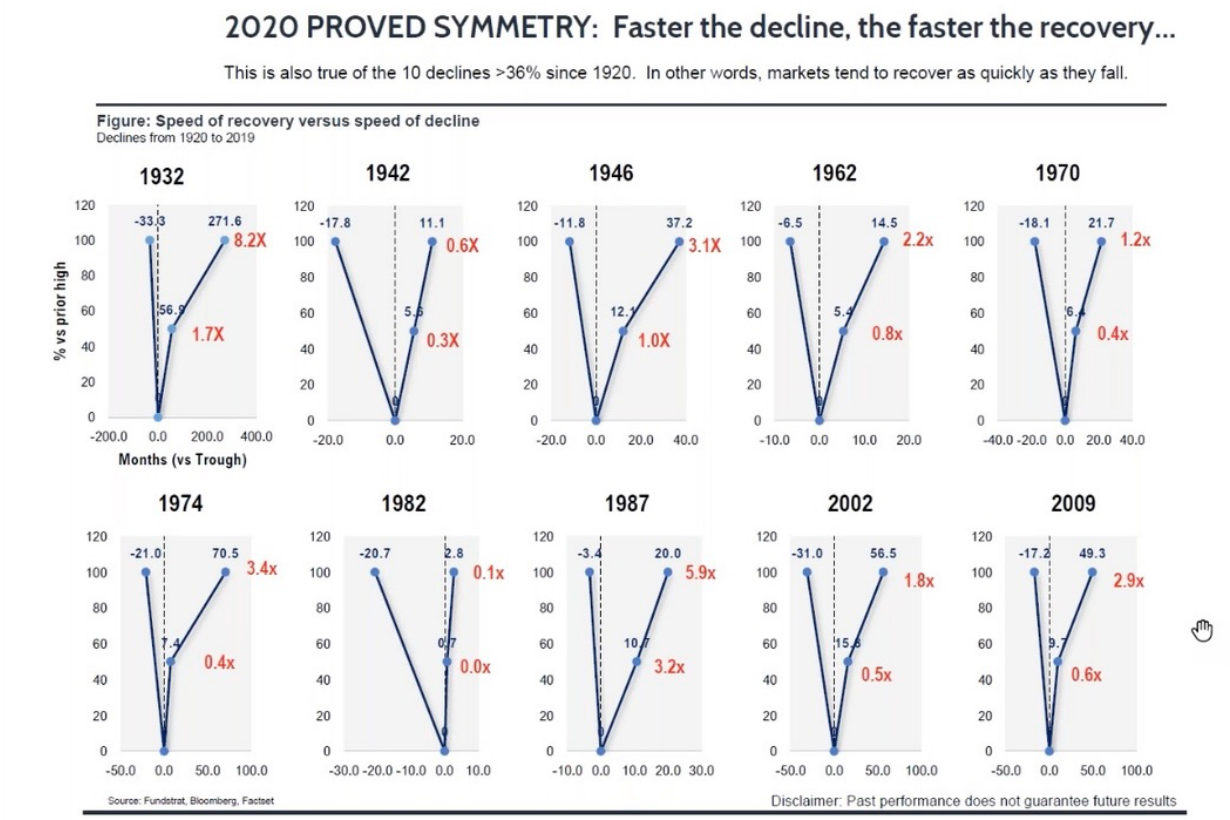
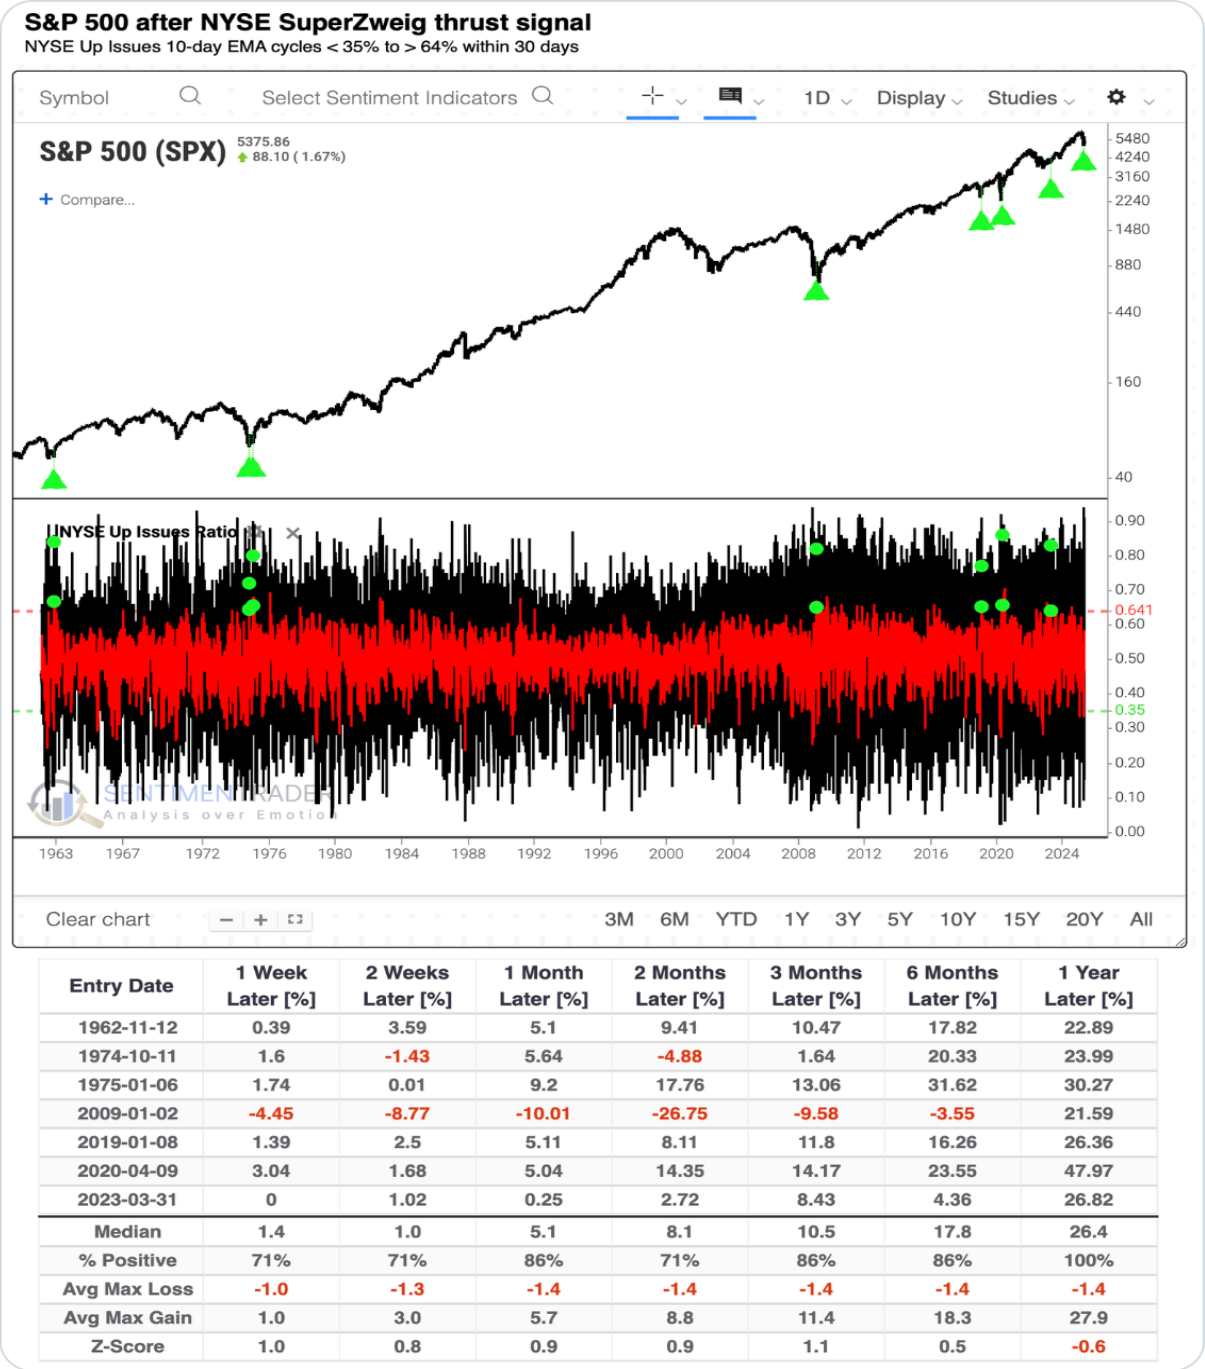
CREATIVE PLANNING						@CharlieBilello		

Opportunities this good are rarely presented.



A third leg down is possible, just like 2020 and 1998, but this decline has been so swift that it increases the odds of a V-shaped recovery.

Talk about a bear killer.



Entry Date	1 Week Later [%]	2 Weeks Later [%]	1 Month Later [%]	2 Months Later [%]	3 Months Later [%]	6 Months Later [%]	1 Year Later [%]

Flea/Micro-cap Stock: It has a market cap of less than $2 Billion, is Illiquid, and has no institutional sponsorship.

O.G: short for “original gangster” or “original gangsta,” is a slang term for someone who's incredibly exceptional, authentic, or “old-school.” OG was originally used in gang culture, but it is now used as a general term to praise someone who is an expert at something.

DISCLAIMER All content published by the Roppel Report — including reports, commentary, emails, social media posts, and any other communications originating from us or our partners or affiliates — is intended solely for educational and informational purposes. Nothing we publish constitutes personalized investment advice, a solicitation, or a recommendation to buy or sell any security. Our work is general in nature and is not tailored to the financial situation, objectives, or needs of any individual reader.

Position Disclosure: At the time of each report's publication, the author and/or affiliated entities - including client portfolios and proprietary accounts managed by our affiliated investment adviser, Roppel Capital Management, LLC, may hold a position in one or more securities discussed therein. Specific position disclosures appear at the end of each individual report. All positions are held for investment purposes and are subject to change at any time without notice.

Conflicts of Interest: We receive no compensation, directly or indirectly, from any company mentioned in our work and have no business relationship with any of the companies we cover. Our opinions are independent and solely our own.

Risk Disclosure: Investing and trading in capital markets carry a high level of risk and may not be suitable for all investors. The use of margin or leverage can amplify both gains and losses. Before investing or trading, you should carefully consider your investment objectives, experience level, and risk tolerance. The possibility exists that you could sustain a loss of some, all, or more than your initial investment. You should never invest money you cannot afford to lose.

We strongly encourage all readers to seek advice from an independent financial advisor and other qualified professionals before making any investment decisions.

No Guarantee of Results: Past performance is not indicative of future results. All information provided is believed to be reliable but is not guaranteed as to accuracy or completeness and is subject to change without notice.

At the time of publication: The author and/or affiliated entities - including client portfolios and proprietary accounts managed by our affiliated investment adviser, Roppel Capital Management, LLC hold a position in the following securities referenced in this report:

AAPL, AMZN, ARM, BE, INTC, LLY, MRVL, MSFT, NVDA, SNDK, TNA, TSLA, XBI, BTC, CRCL.

ALL POSITIONS ARE SUBJECT TO CHANGE WITHOUT NOTICE.
