THE ROPPEL REPORT

©2026 Roppel Report, LLC - All rights reserved.

Please find important disclaimers at the end of this report.

▼ Market Temperature

My Buy Window is: Selectively Open.

Our team uses a systematized sell discipline to mitigate losses in a falling market. The specifics of this sell discipline may change over time (you can request a summary of the firm's current approach by contacting info@roppelreport.com, but generally the firm will sell off positions in multiple tranches as a security's price drops from a specific target level (commonly its purchase price).

All buy ideas require a significant pickup in volume to validate the breakout or buy point—minimum volume pickup of 40%, ideally 500%+.

0 is the most negative term outlook, and 10 is the most bullish. It's reasonable to say that if the market temperature is 5, your total exposure could be 50% long.

Short-term Trend 1 to 3 weeks (6/10)

***Please note that the short-term temperature can change at any moment, and I have the least confidence in this time frame.**

Intermediate-term Trend 4 weeks to 5 months (10/10)

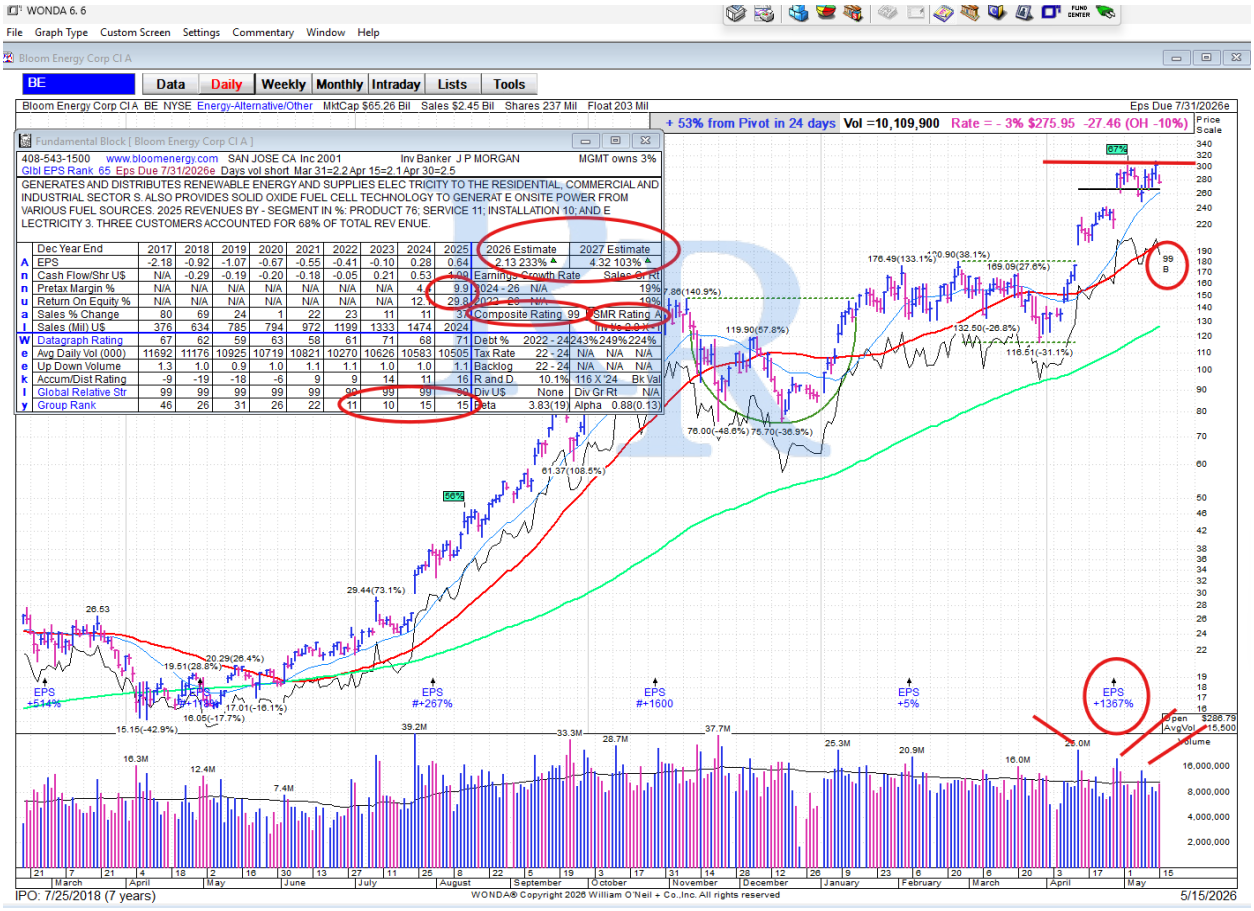

Long-term Trend 6+ month Trend is up: Bullish (10/10)

Because sentiment and many measures became deeply oversold in April of 2025, to levels signaling panic selling. Conditions like the market is experiencing almost always result in significantly higher prices in 12 to 18 months. We remain in a Raging AI-driven, disruptive tech Boom that may be turbocharged by a new pro-growth President. This is a very potent cocktail of technical and fundamental variables that historically give birth to new bull markets that can rise 100% and spawn dozens of new leaders that rise hundreds of percent, very much like 2024, except longer in duration, when not sidetracked by unforeseen black swan asteroids.

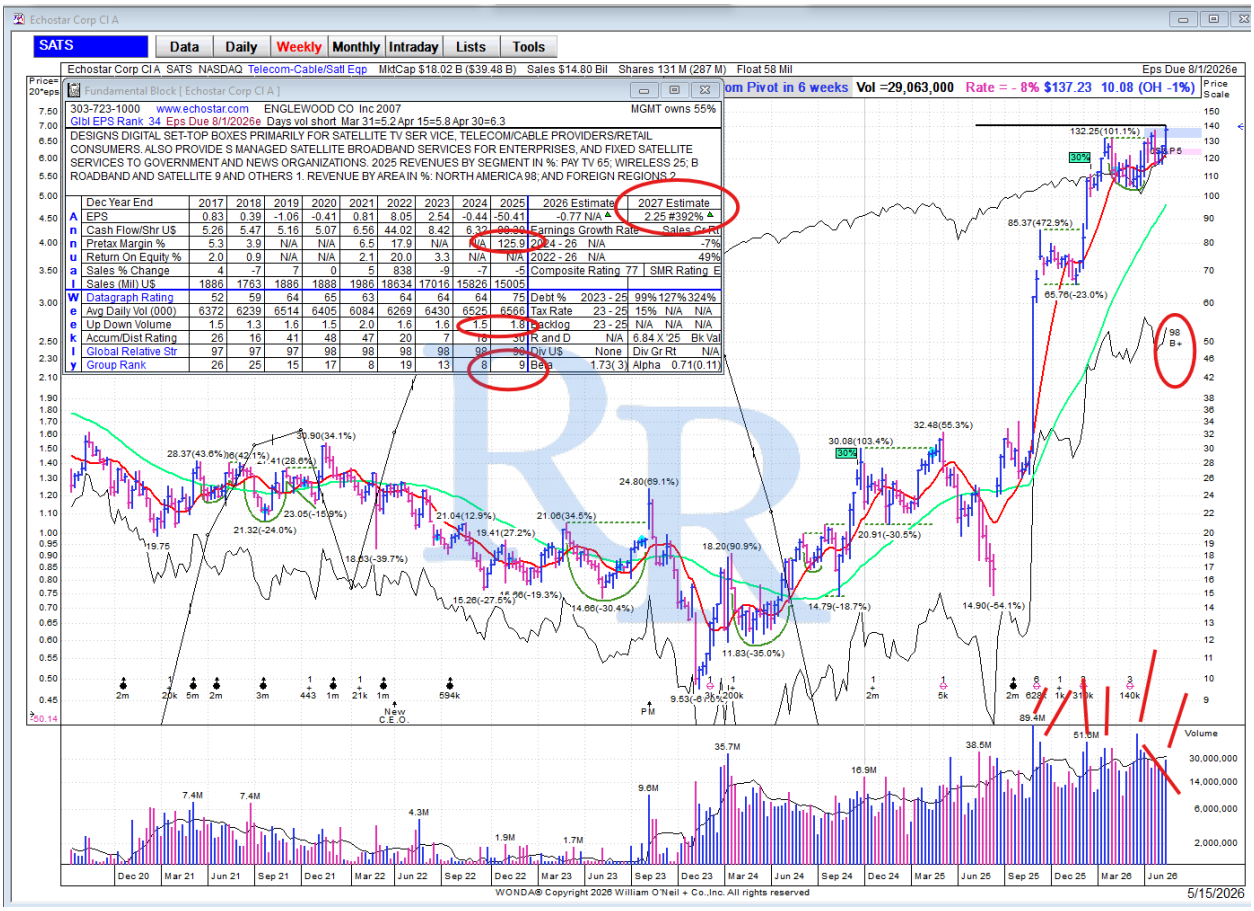

Regardless of what the market does in the next few months, I am very confident that it will be significantly higher in 12 to 18 months!!!!!!!!!!!!!!!!!!!!!! I can't believe we are going to get another opportunity to perform like 2024!!!!!!!!!!

▼ Best Actionable Ideas

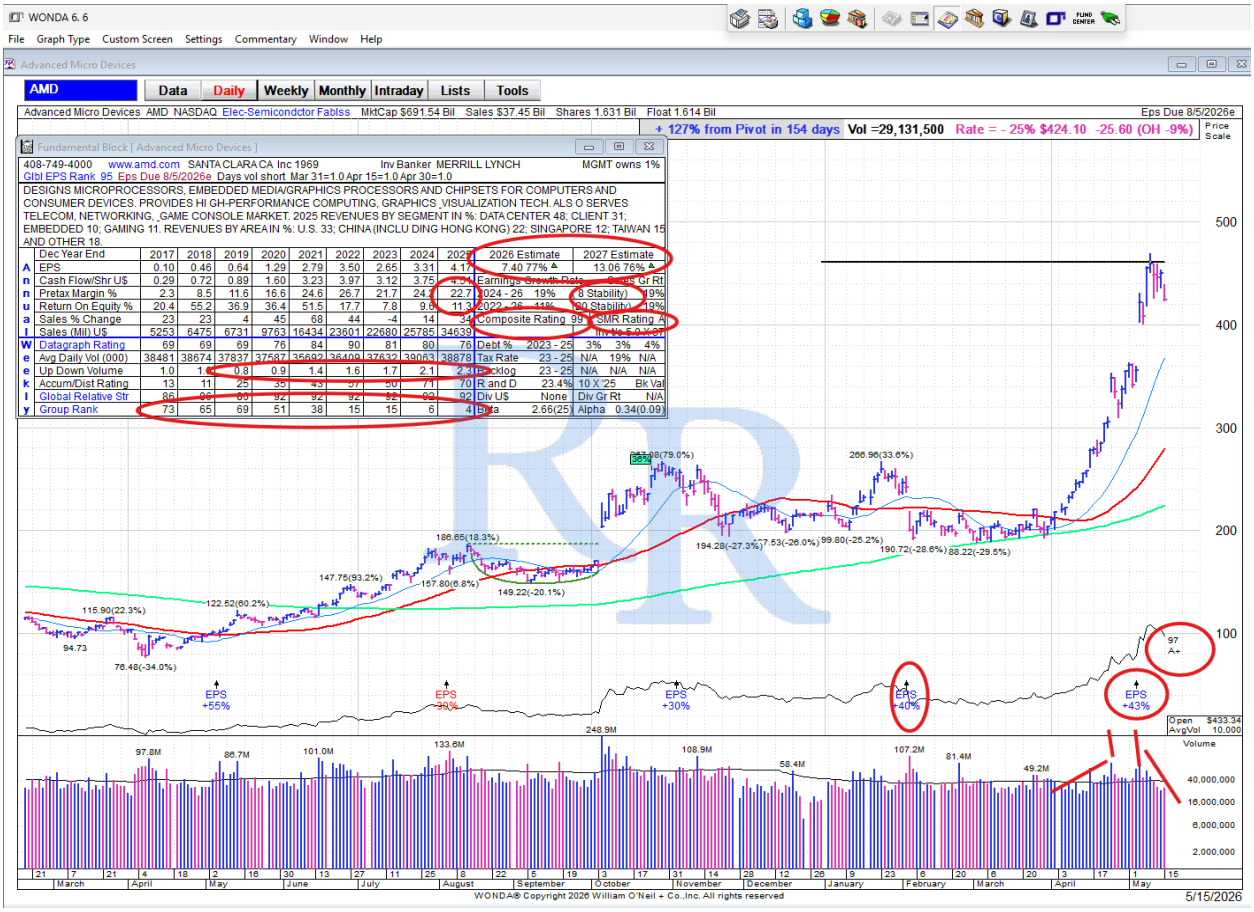

This list is only to be utilized when the Market is in an uptrend. Ideas are only actionable at or above pivot points on significant increases in volume.

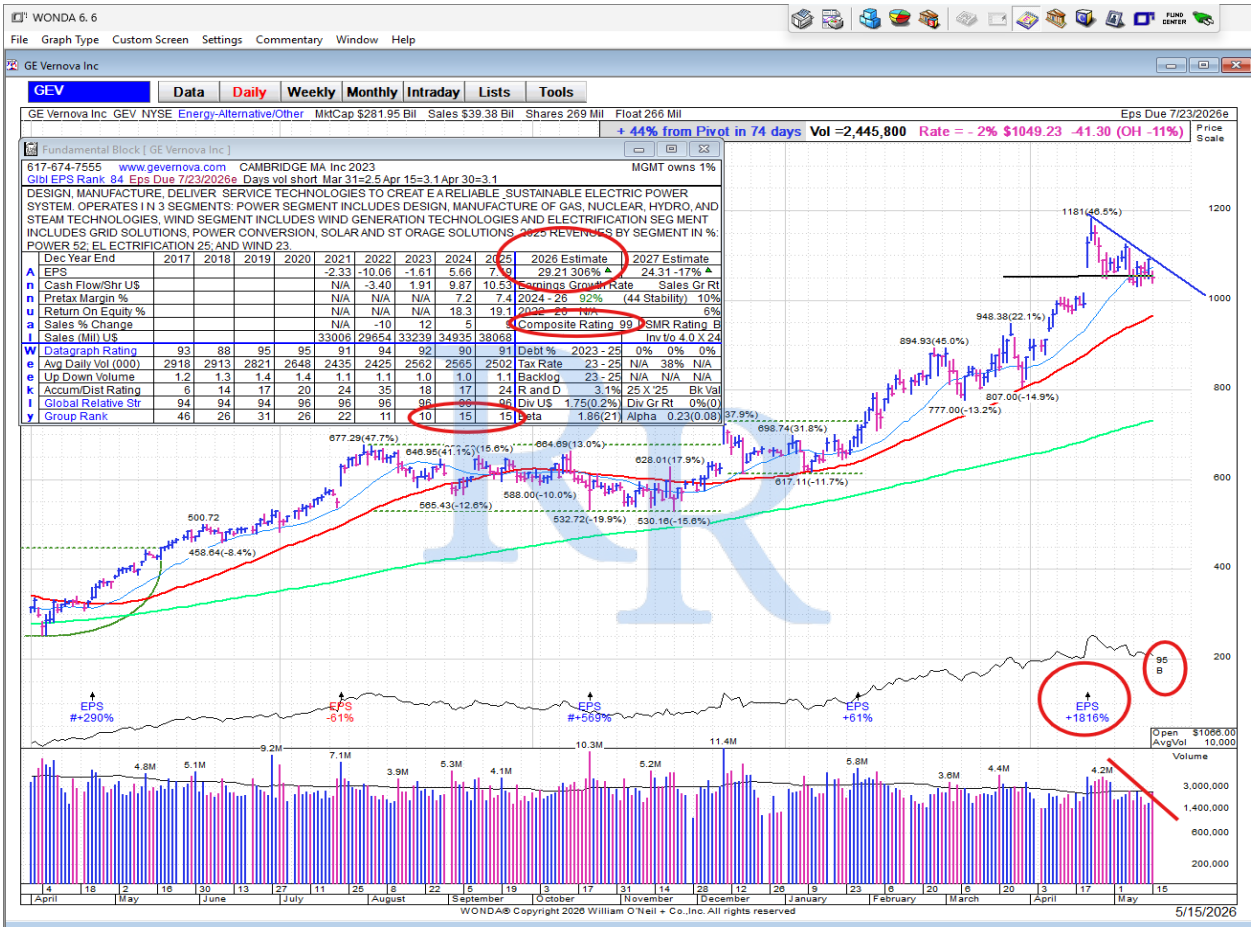

BE is the king of solving energy bottlenecks. BE is working on a mini digestion after a failed breakout attempt last Thursday. I am not shocked that last week's breakout failed due to the short duration of the digestion. Pivot in progress over $310.25ish. I have a partial hedge on due to the oversized position I have.

SATS: I love that this name is performing so well and no one has heard of it; there has been ZERO commentary on CNBC. The mirror opposite of SNDK. The volume signature is pristine. Pivot right here.

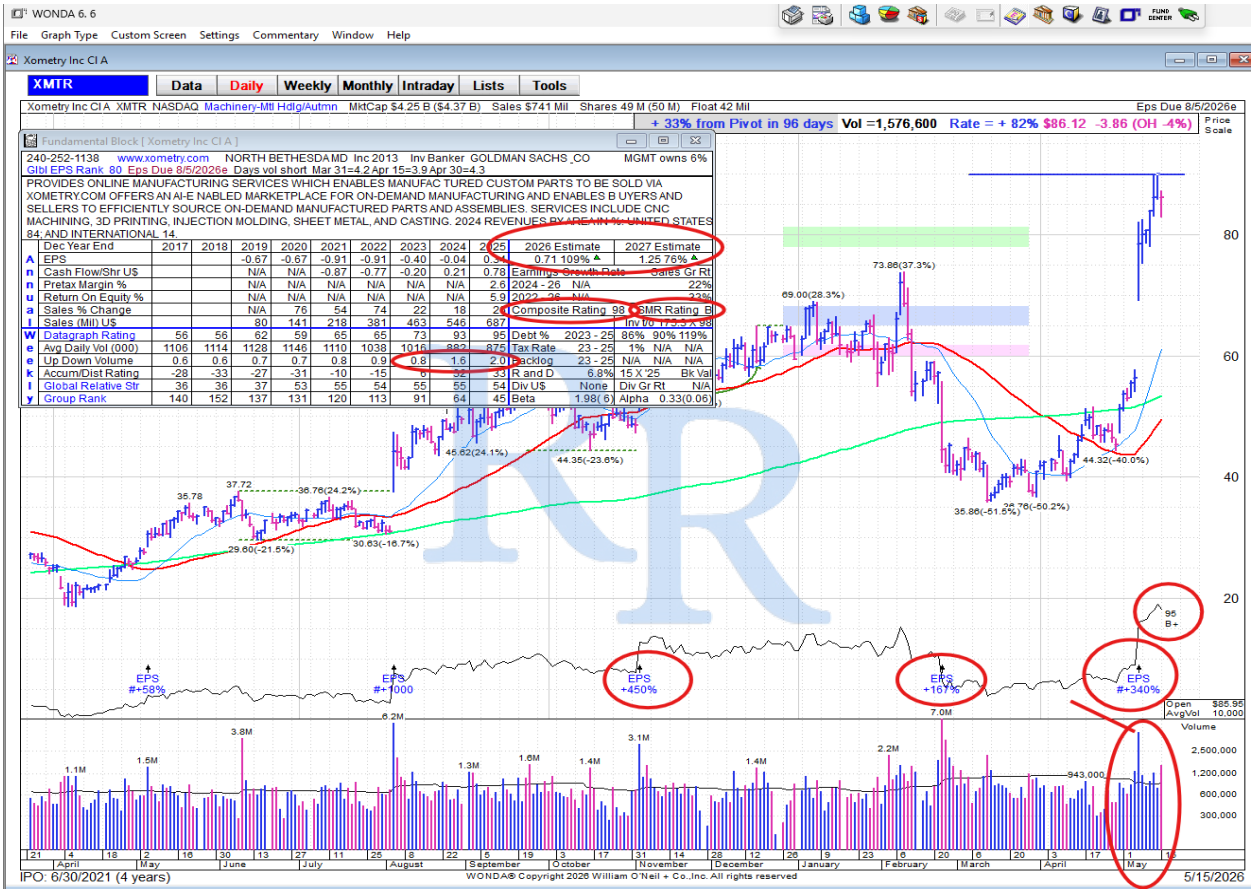

AMD: I am WOWed with the market's new perception of AMD, note the great Volume signature. It looks like it has an undercooked flag in progress. Wait for more digestion, but be ready to pounce. AMD is an uber-liquid new TML, 99Comp, 97 RS.

GEV has a mini pivot developing over the short-term descending trendline, as volume has been drying up. Last quarter's +1816% earnings report was one for the record books.

AI energy demand keeps this group white hot!!!!!!!!!!!!!!

XMTR was junk as far as the technical picture is concerned, and a flea until the last earnings report/beat. This is a perfect example of how one report can change the market's perception from dog to star. Flag is likely in progress. Wait.

+33% EPS beat commanded the institutions' attention.

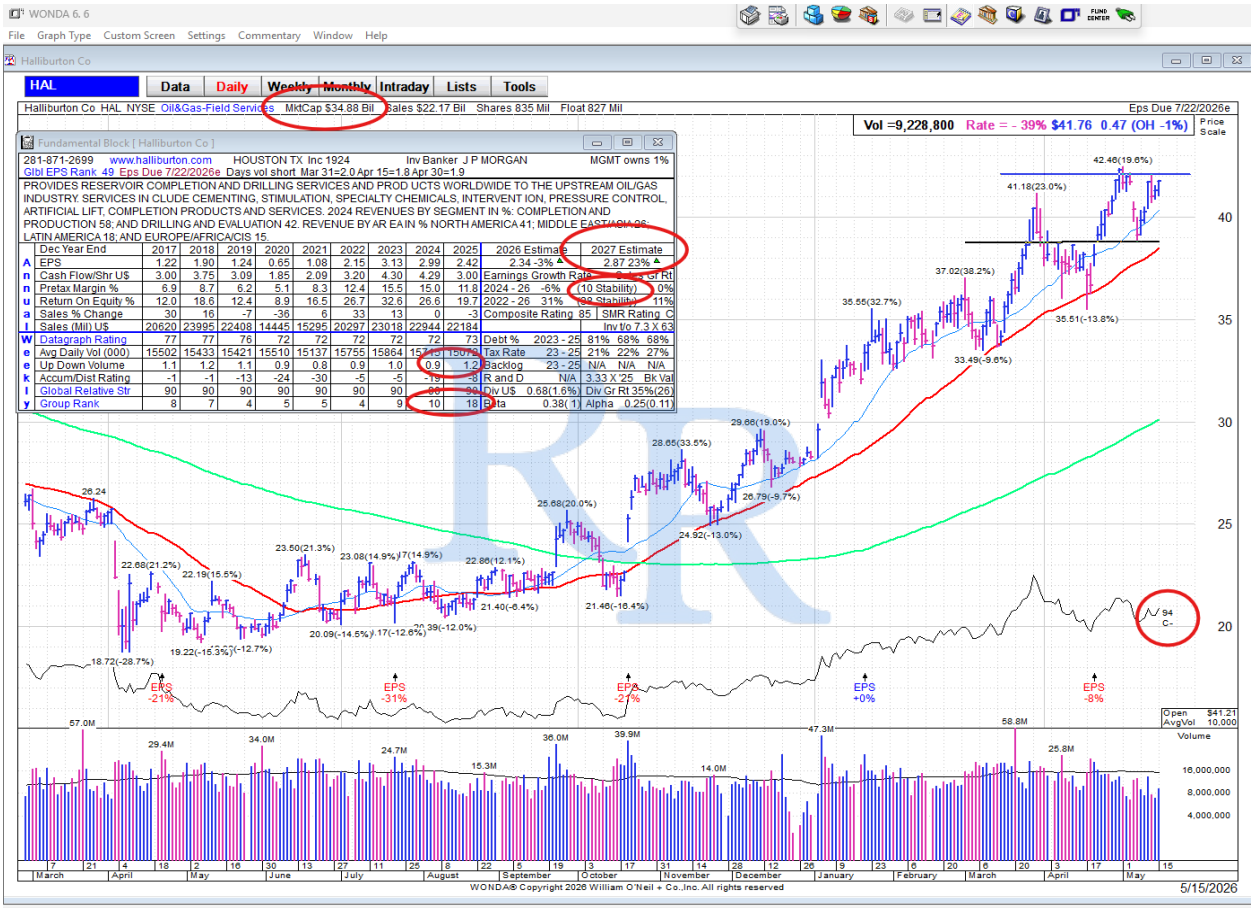

PWR: Another flag is in progress from the white-hot energy AI sector. Pivot over $789.00.

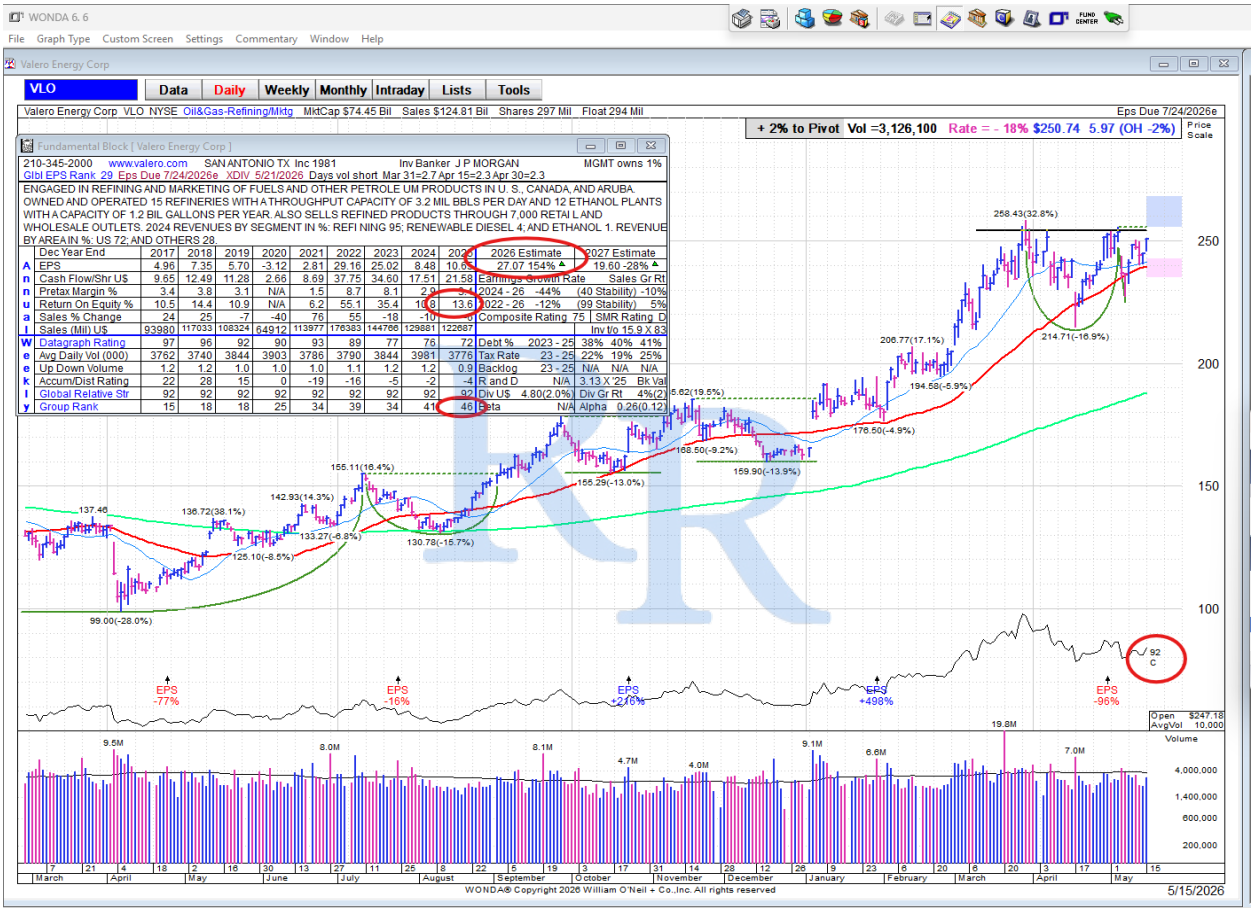

ALAB: Friday's crummy tape could not hold ALAB down = basketball under water. The chart is not technically tight, but the power is undeniable, like AAOI. 99COMP and actionable right here.

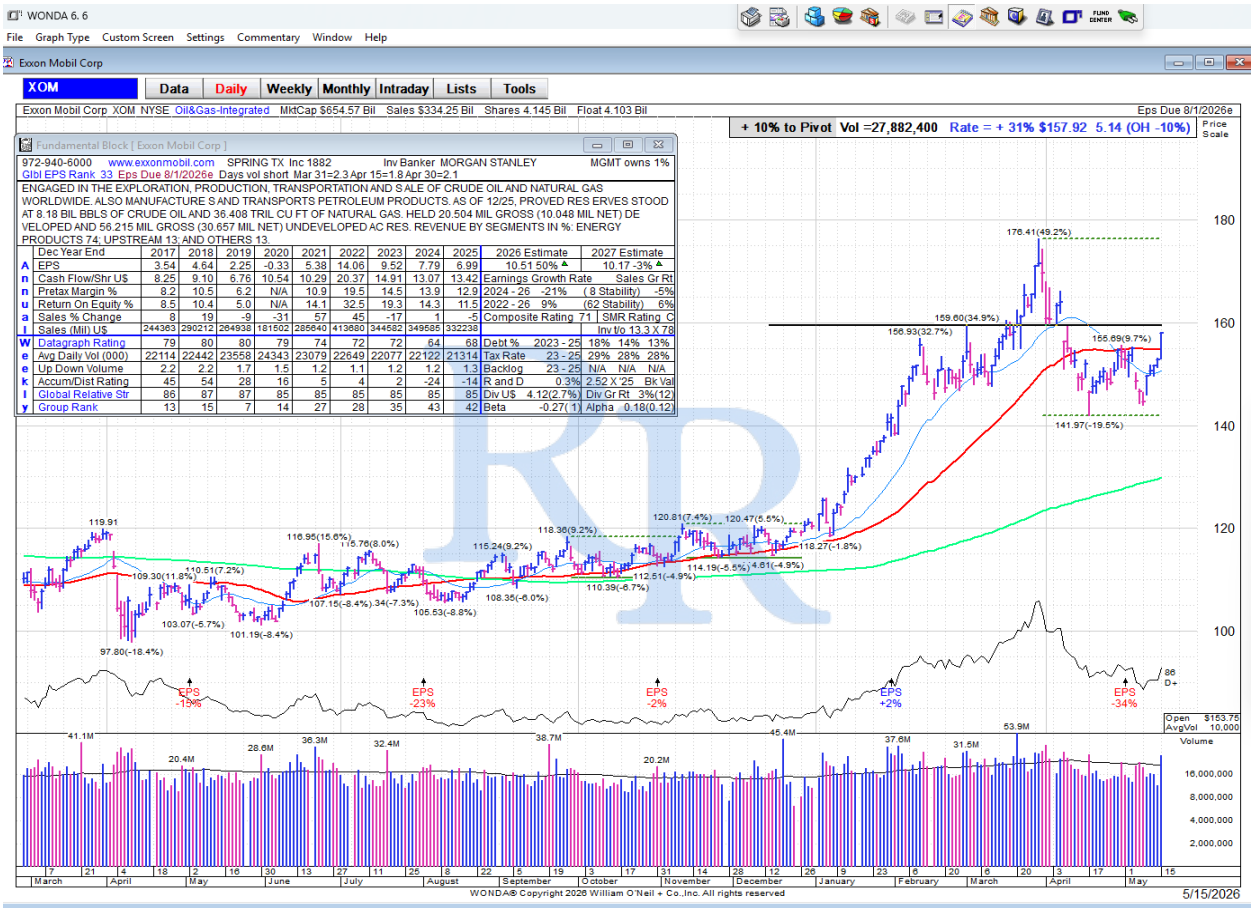

RIG has required a lot of patience. The pivot is over $7.25. This sector is loaded with strength.

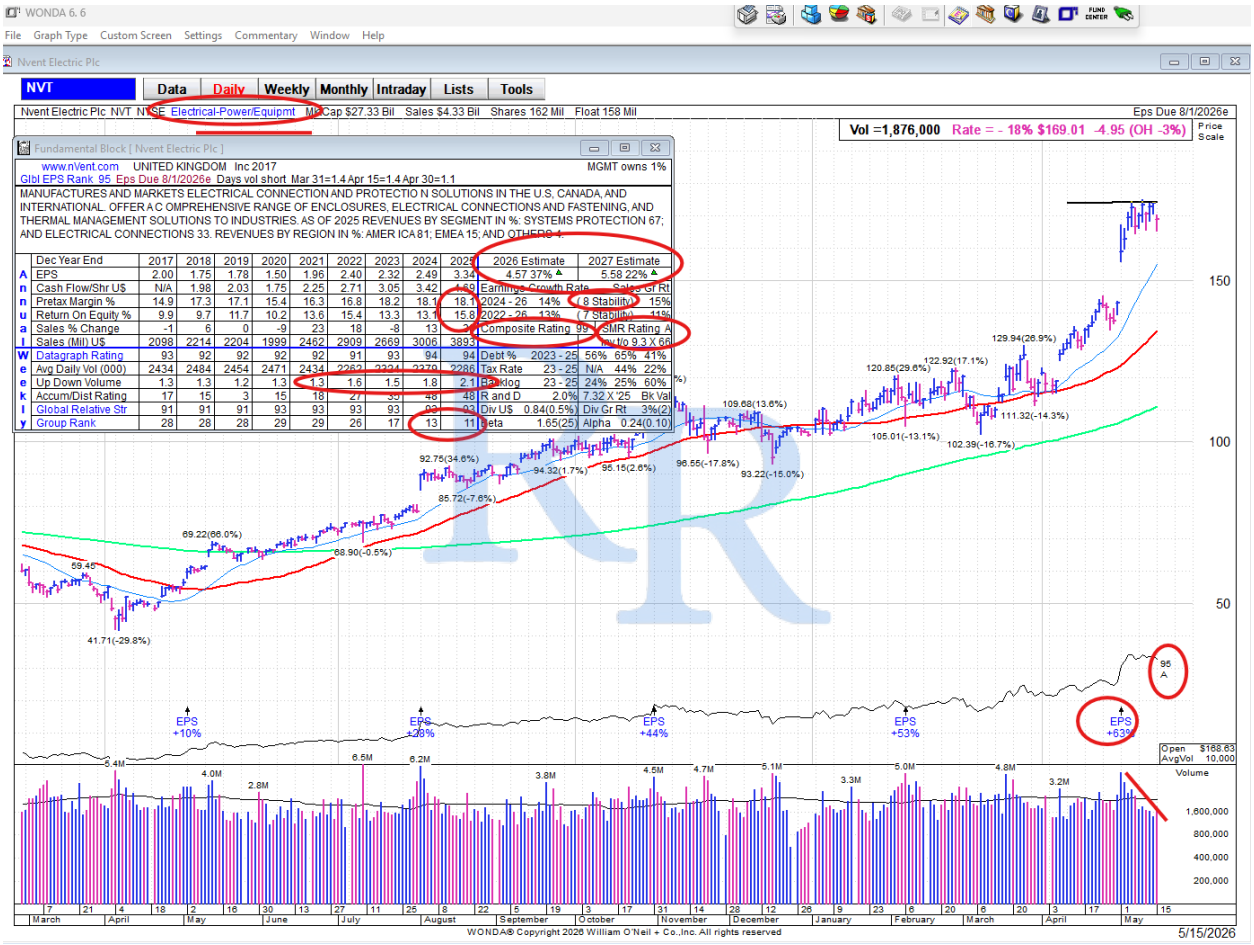

HAL is like RIG, but HAL is a liquid leader. Pivot over $42.55ish.

VLO: O & G are not the most stable financially due to their cyclical nature, but the group move is undeniable. VOL is the liquid leader. Very clean pivot over $255.75.

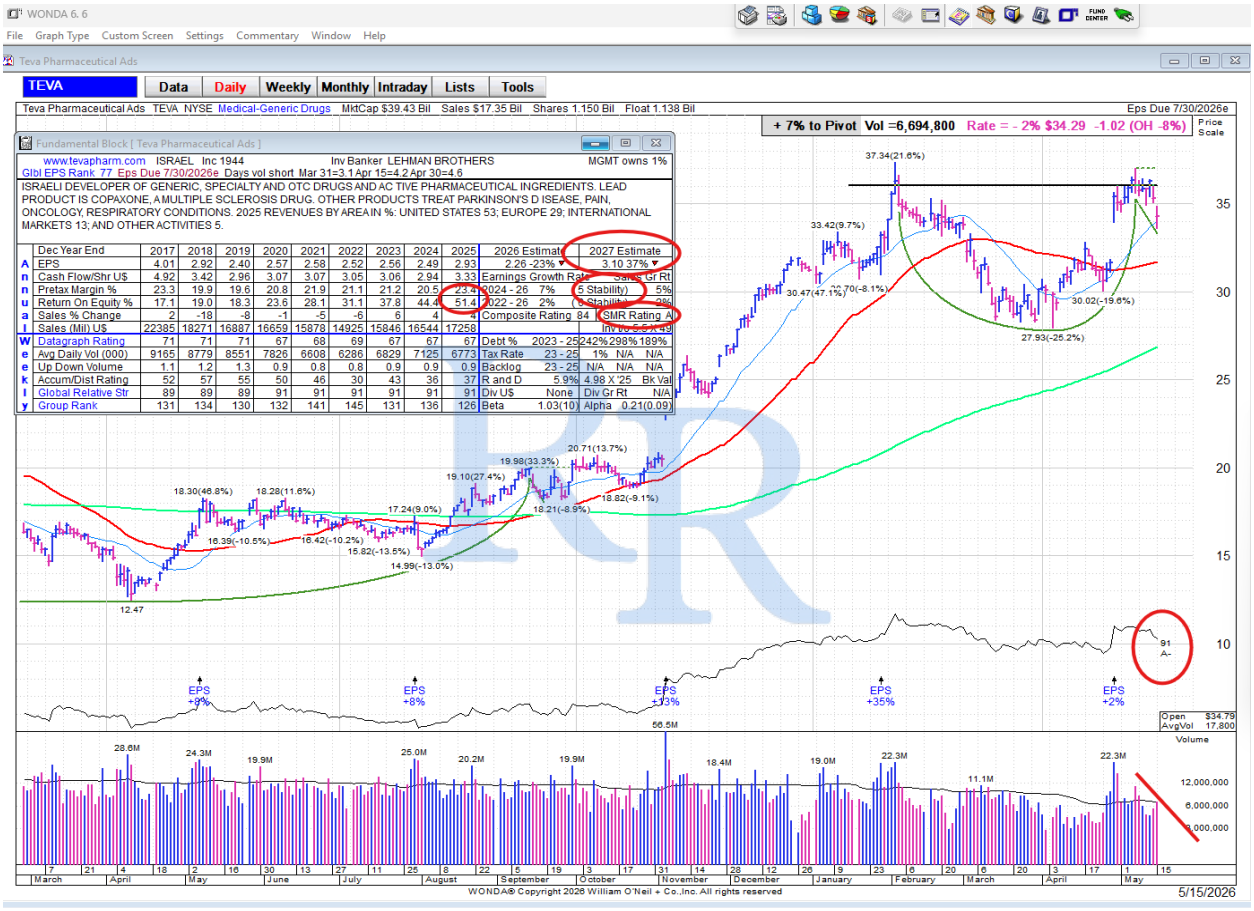

XOM: Breaking above the 50DSMA is a "build a position" moment for the MacDaddy of O&G. @Gordie. If XOM can hold over the 50DSMA for 10 trading days, new highs could be in sight.

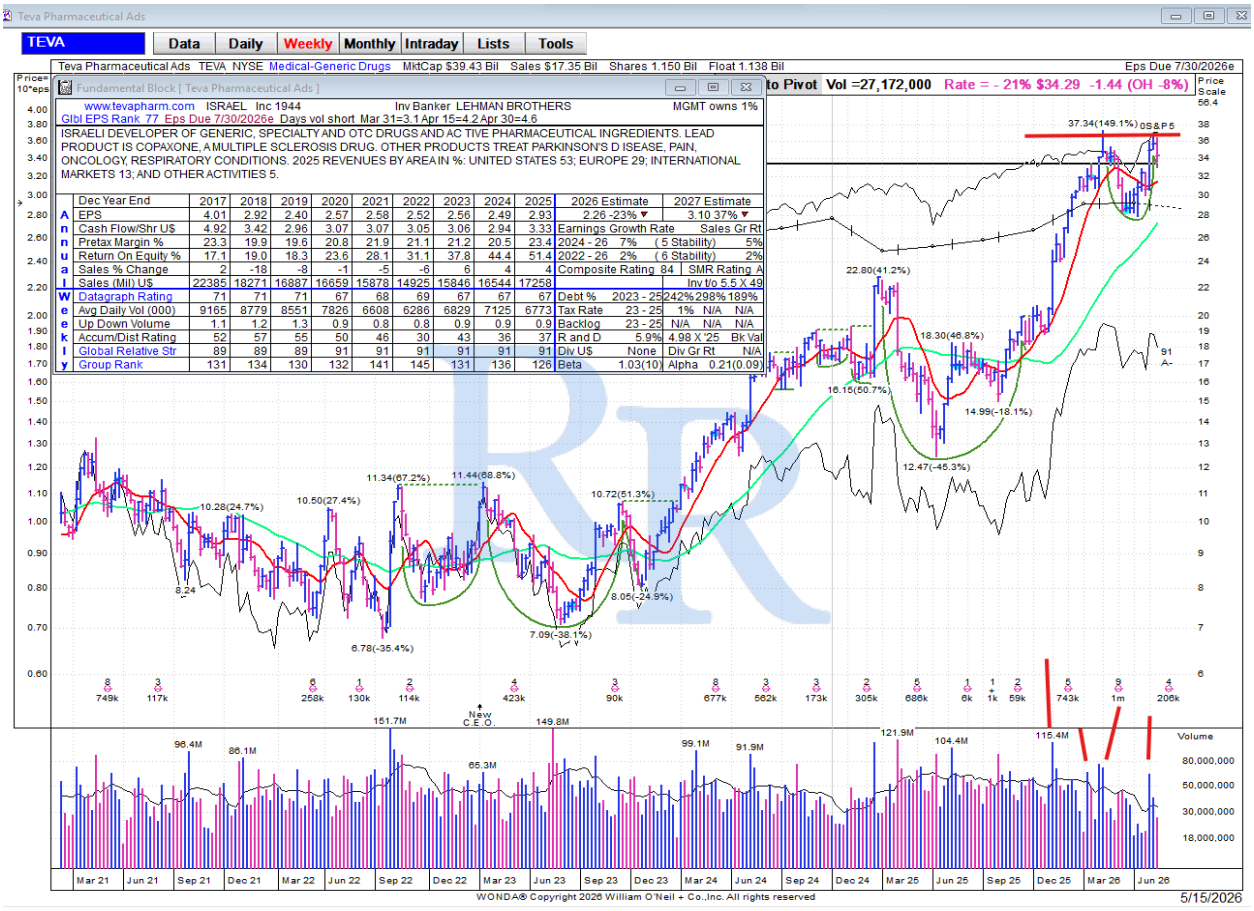

NVT: ANOTHER AI name Flagging and 2WT. They are so plentiful, it's getting boring. Pivot over $175.25. Note, the volume drying up as the flag progresses. These are historic times. I may be an overly optimistic perma-bull, but even I was too bearish.

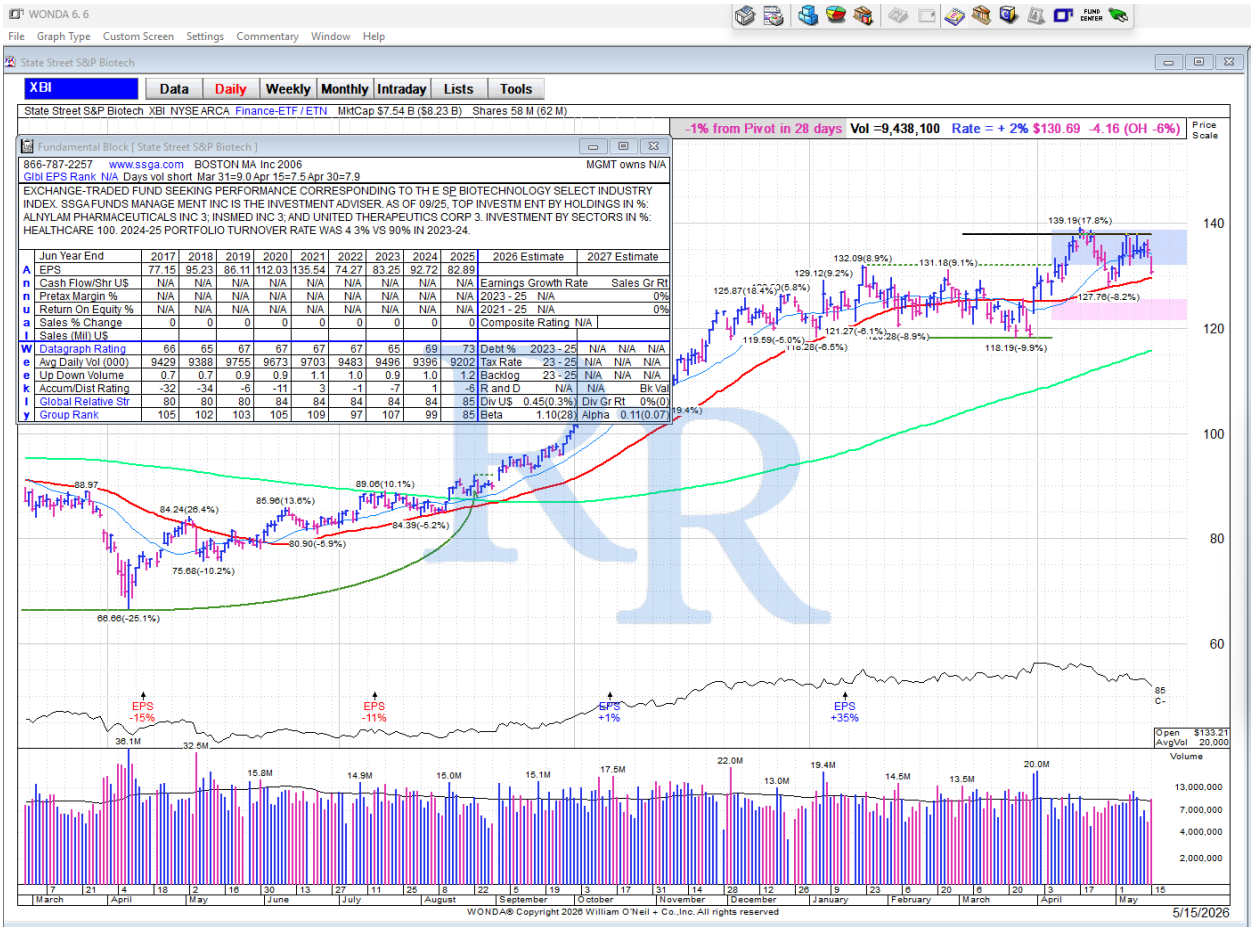

Note the bearish  **X hatters have been awfully quiet.**

TEVA a shakeout is in progress. Pivot over $37.15.

TEVA Weekly: Note the Skyscrapers of Blue Volume Accumulation=SOBVA.

XBI has been testing everyone's patience while AI steals the show. I like building positions if, if, if it holds the 50DSMA.

Fear and Greed Index Chart

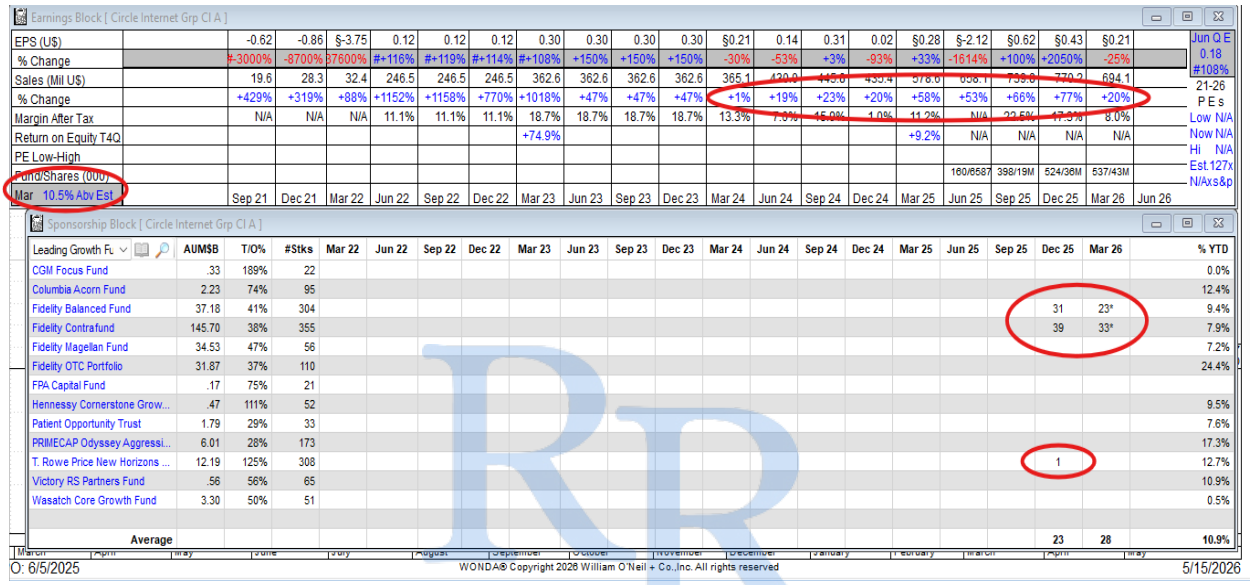

Stablecoin demand is insatiable, and the market cap has now formed a bullish flag!!!!!!!!!!!!!!!!

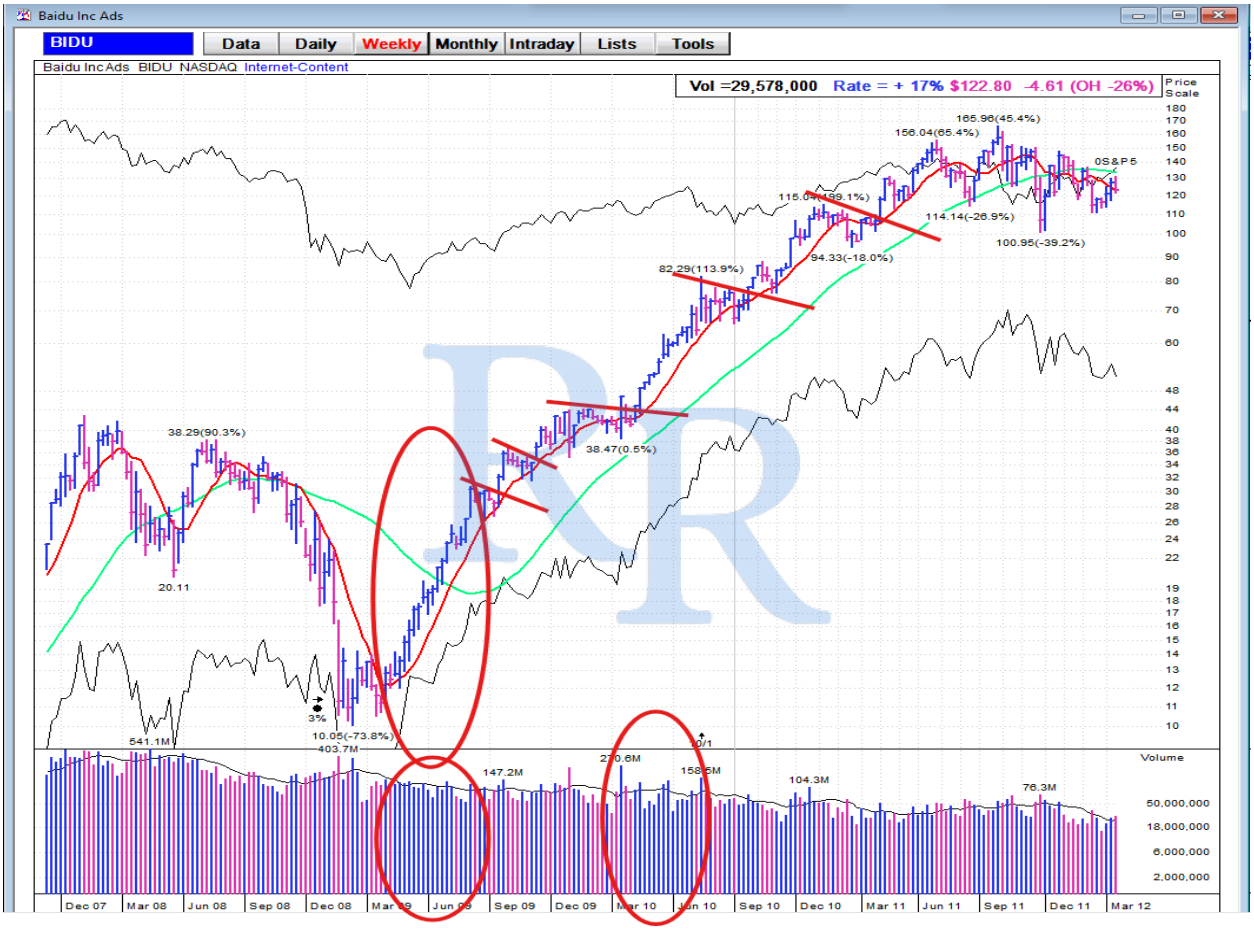

CRCL has the second-most bullish fundamental story, stablecoin adoption, that I am aware of outside of AI. I see an atypical base in CRCL. Note the volume dried up during the April digestion and the SOBVA as it ran up the right side of the cup. It is now in the fourth day of a handle. I am very excited about this situation as I believe it has very similar fundamentals to BRCM, which built my war chest, and BIDU, which really changed my life forever.

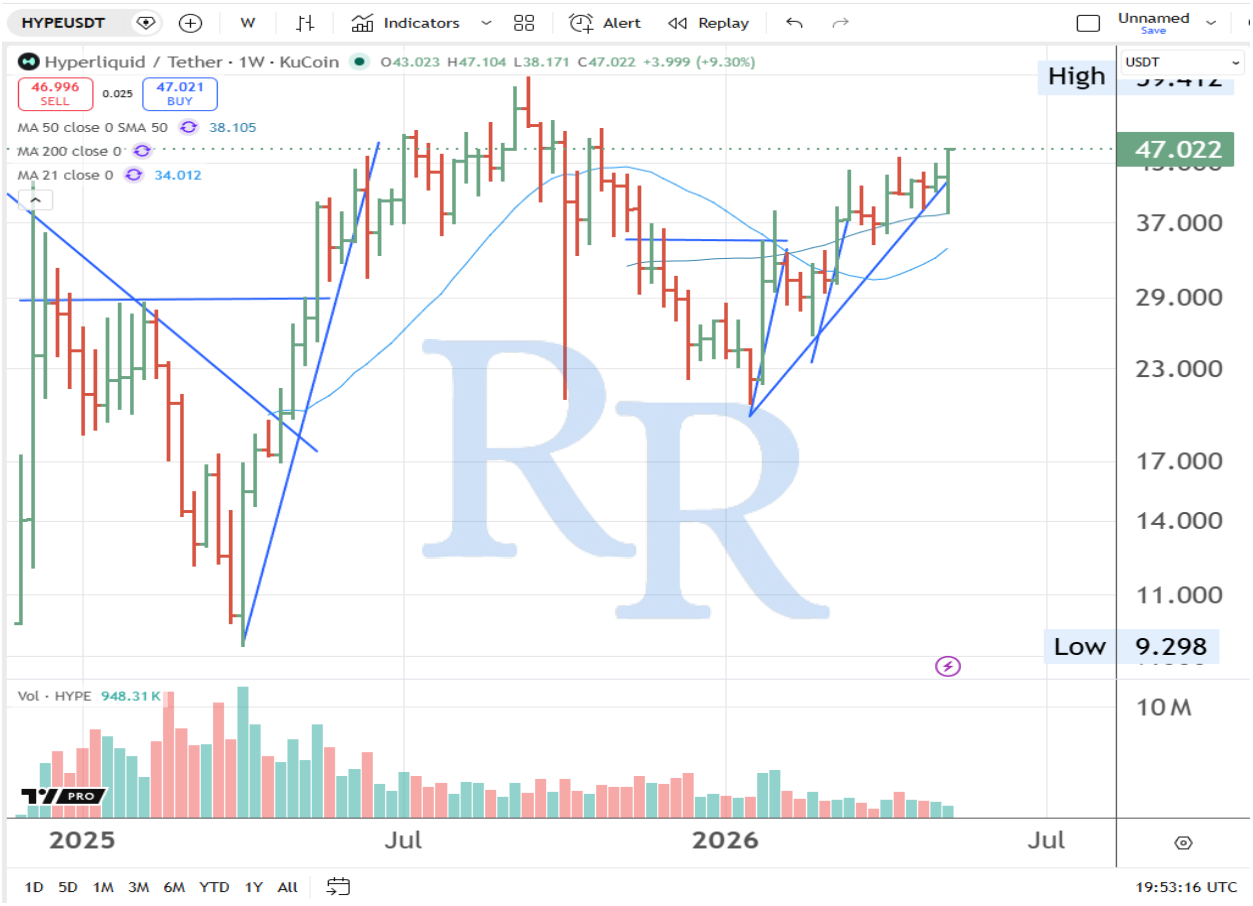

I will be dedicating a Special segment of this Wednesday's video detailing BRCM and BIDU's fundamentals and comparing them to CRCL. I do not want to over hype this presentation as there are no locks BUT, I would not miss this Wednesday's video!!!!!!!!!!!!! CRCL is fast becoming a MUST own name.

CRCL: FIDO is in, and T. Rowe is sniffing around. Sales are erratic but growing. There are no earnings YET, but estimates are Big.

BIDU: $10.00 to $165.00 in 30 months. Note the WOBVA and SOBVA.

HYPE remains the RS star as last week it defied crypto's general market decline!!! Pivot right here.

BTC Weekly: The downtrend has been broken to the upside, but it looks a bit wedgy. Last week was down and it would be great if it was the start of a solid handle. If so, pivot would be $82,860.

ETH weekly reflects a five-week handle with a $2471.00 pivot. Note, volume has been drying up through the handle.

SOL is in a Darvas box.

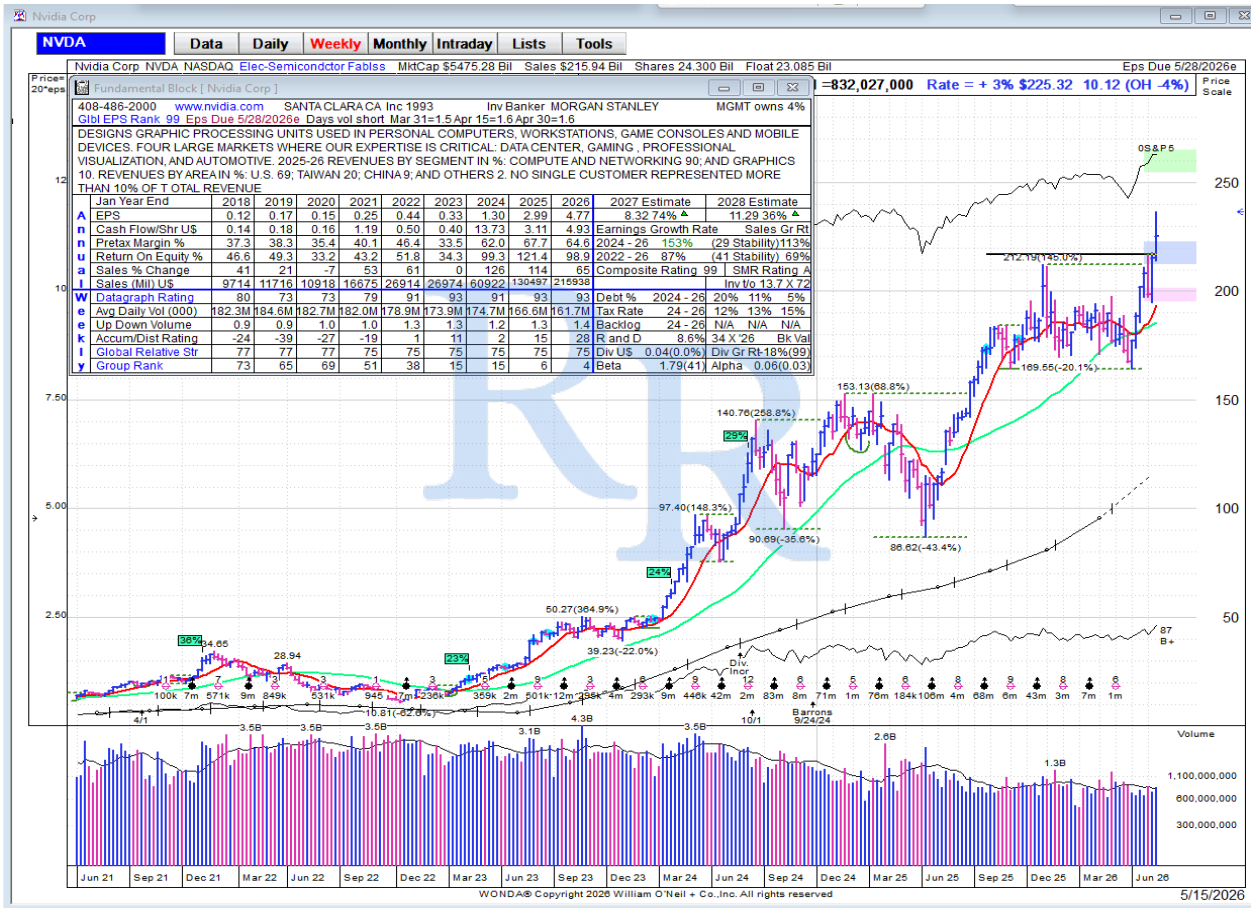

PURR is slowly trying to break out.

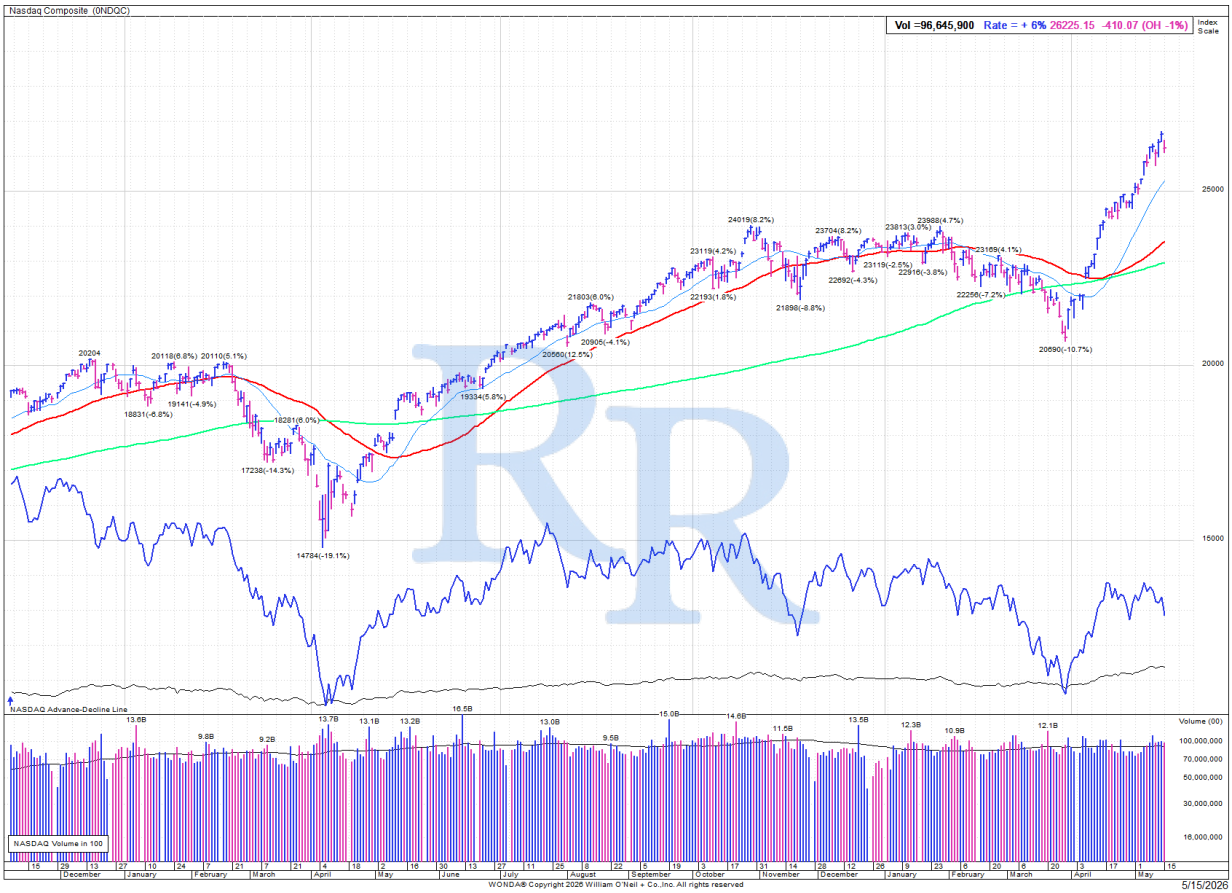

This can make or break the Digital Asset Ecosystem short-term, but long-term Crypto is inevitable.

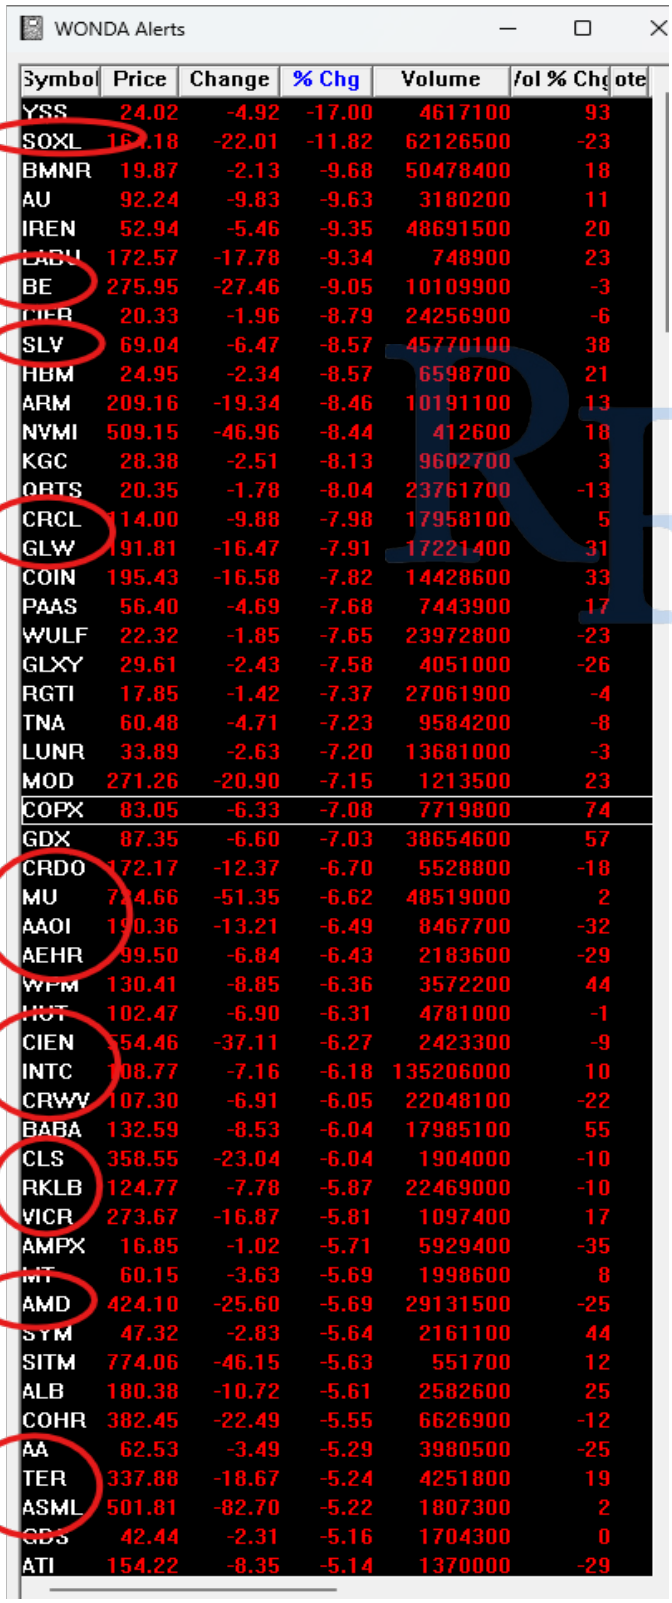

▼ Market, Indexes, Indicators, and Dominant Factor Charts

NVDA: The Biggest event this week will be The MacDaddy's earnings report on Wednesday after the close. So, we will be talking about it during Wednesday's market review video. NVDA's breakout last week, even with its midrange close, was VERY Bullish for the general market. U/D is at the highest reading in months, which dilutes my concern that volume was only average during NVDA's breakout last week. I will lean bullish until I see contrary price action.

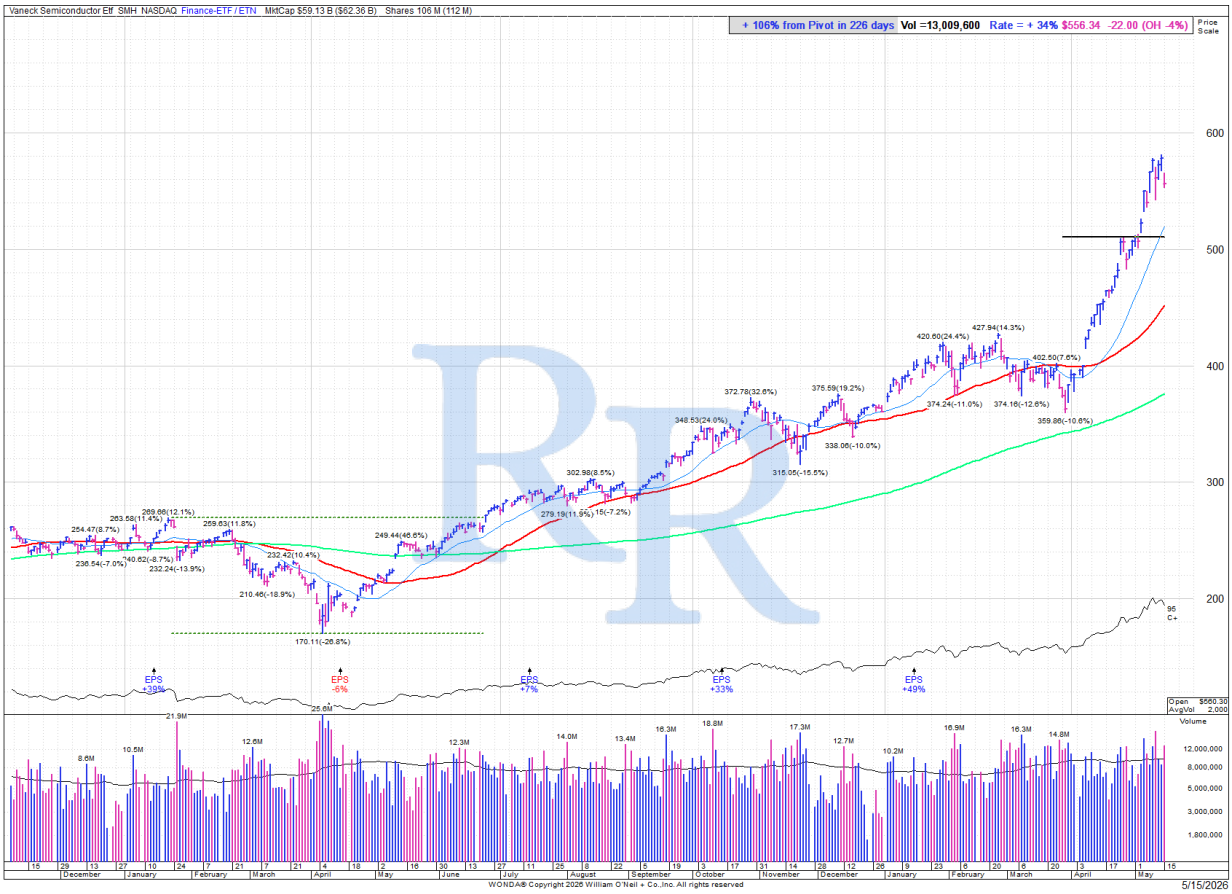

NASDAQ was +13% over the 50DSMA and is now +11% over. Until I see distribution or a severe churn day, I need to remain bullish. A/D is now Bullish.

Friday was a bit of a trend reversal, as several of this year's leading stocks were hit hard by the rally in treasury yields.

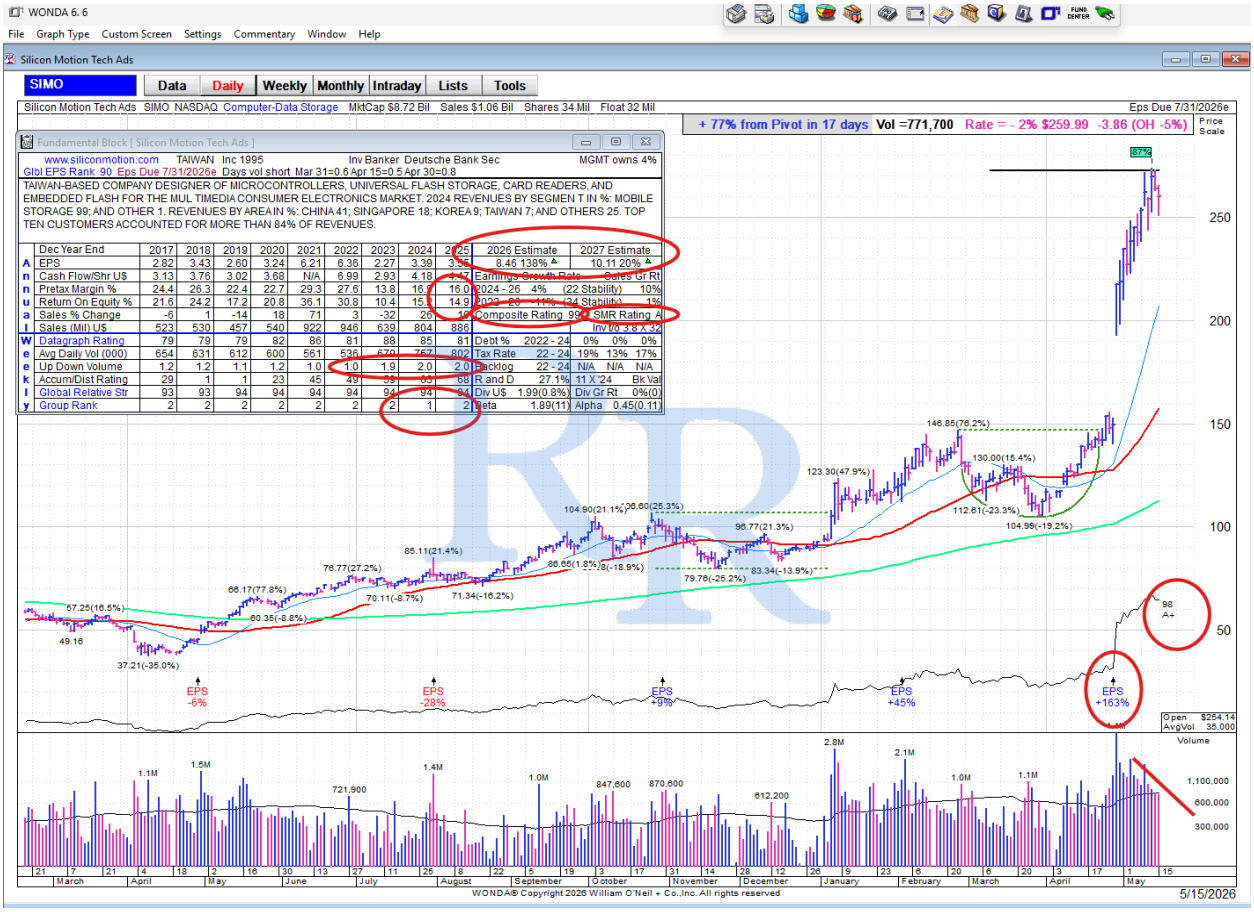

Energy-related was in gear last Friday.

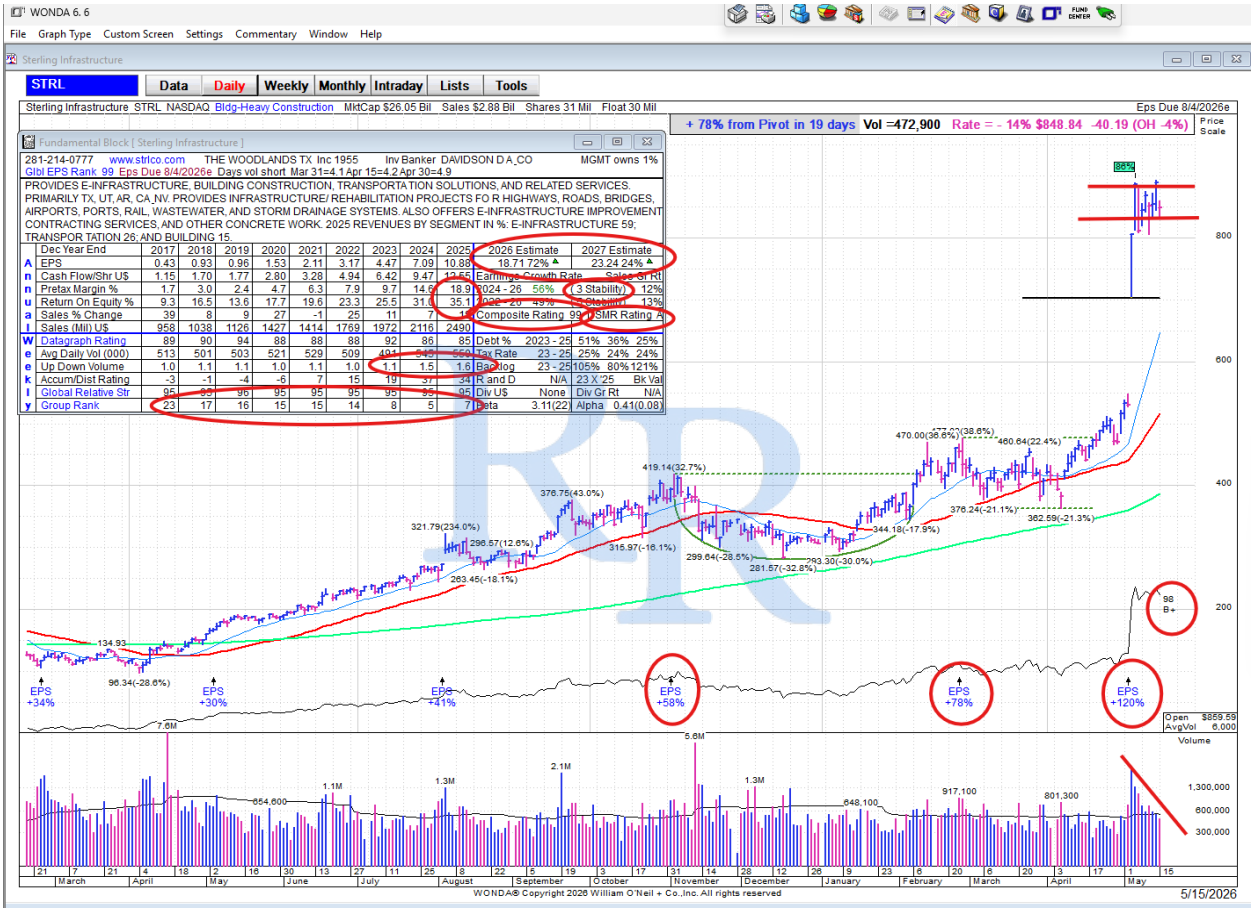

SMH: Even with the insane level of extension, the individual leaders continue to look spectacular with limited signs of distribution.

AMAT (Curtis, Buy, PT: $510) *Co. reported strong AprilQ results last night and guided the JulyQ was well ahead of consensus. We note that record foundry revenue powered semi systems to +16% Q/Q. Meanwhile, GM came in better than expected at 50%, driven by manufacturing cost improvement and pricing. In addition, OM came in above expectations at 32.1% despite slightly higher opex. Looking ahead, we continue to view AMAT as exceptionally well positioned with agentic AI workloads now adding incremental CPU, DRAM, and NAND demand on top of the existing training and inference build out. Further, we see the newly announced EPIC Center partnerships adding another layer to the LTstory with the potential to drive accelerated design wins. We raise our estimates and continue to model '26 & '27 revenue well ahead of the Street.*

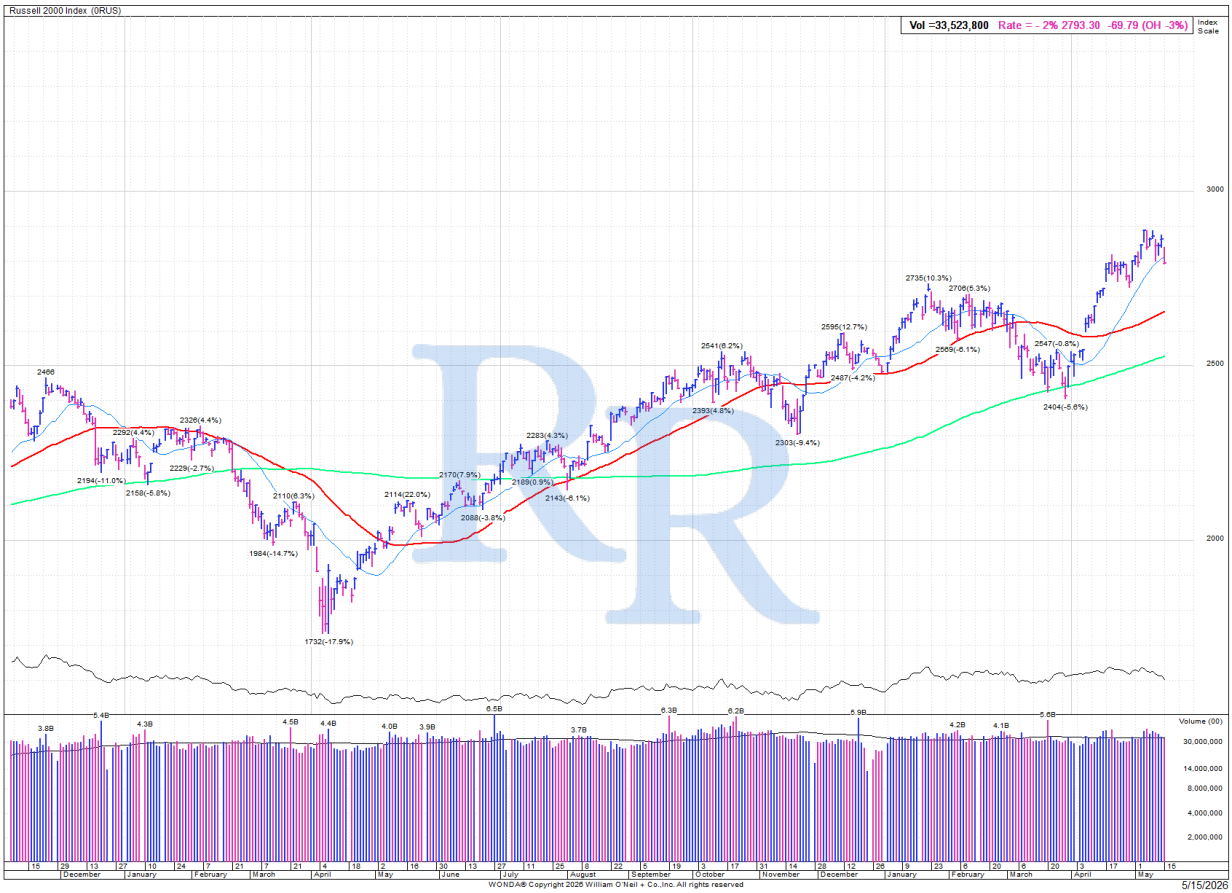

:

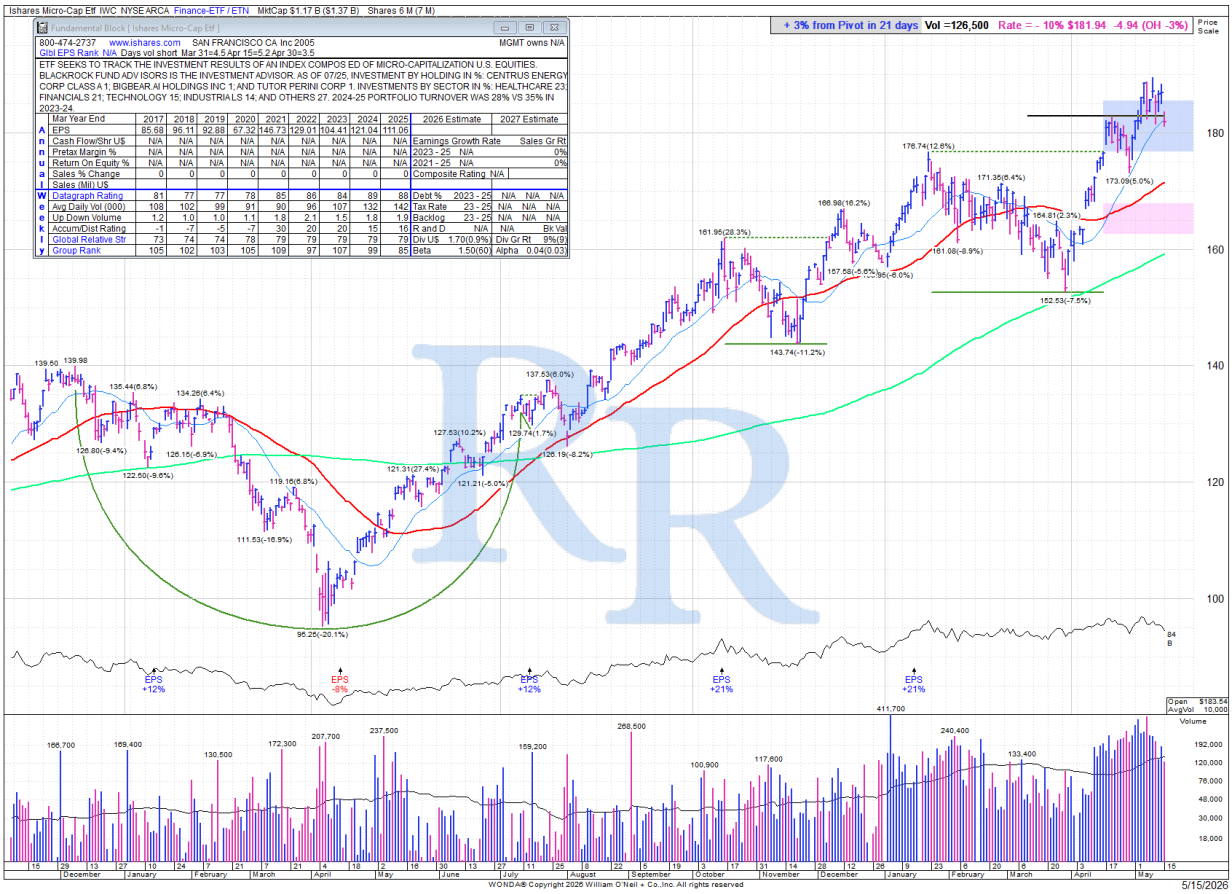

SIMO: The fact that SIMO has not given up any of its earnings gap up and actually moved higher gives a strong signal that the market remains healthy. COCO, too. The general lack of breakout failures continues to tell me the market is healthy. SIMO is a new leader, but extended. Wait for a pivot.

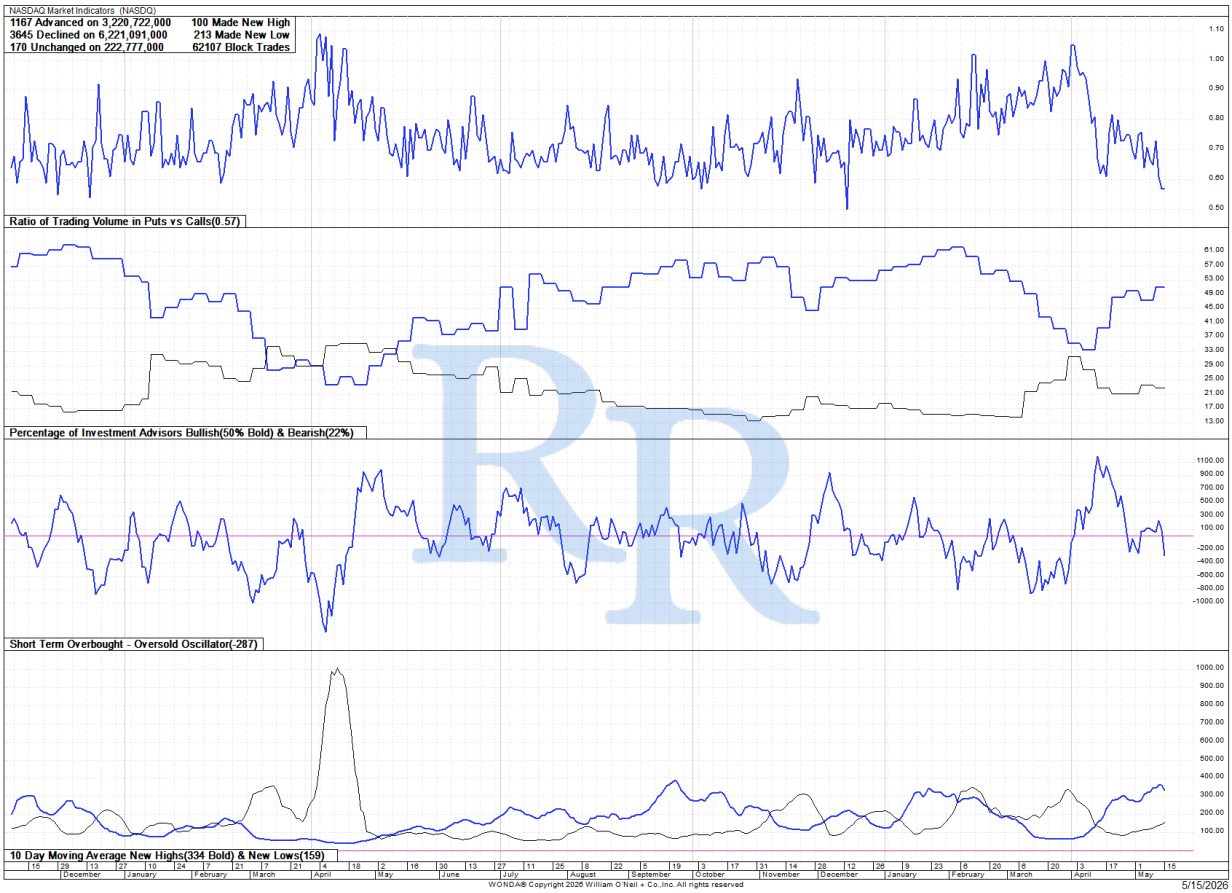

STRL: Another Sterling example of holding an earnings gap, and it looks like a tight flag is in progress. Pivot is over $900. I have ignored this name because I consider it illiquid. The AI buildout RAGES on!!!!!!!!!!!!!!!!!!!!!!!!!!

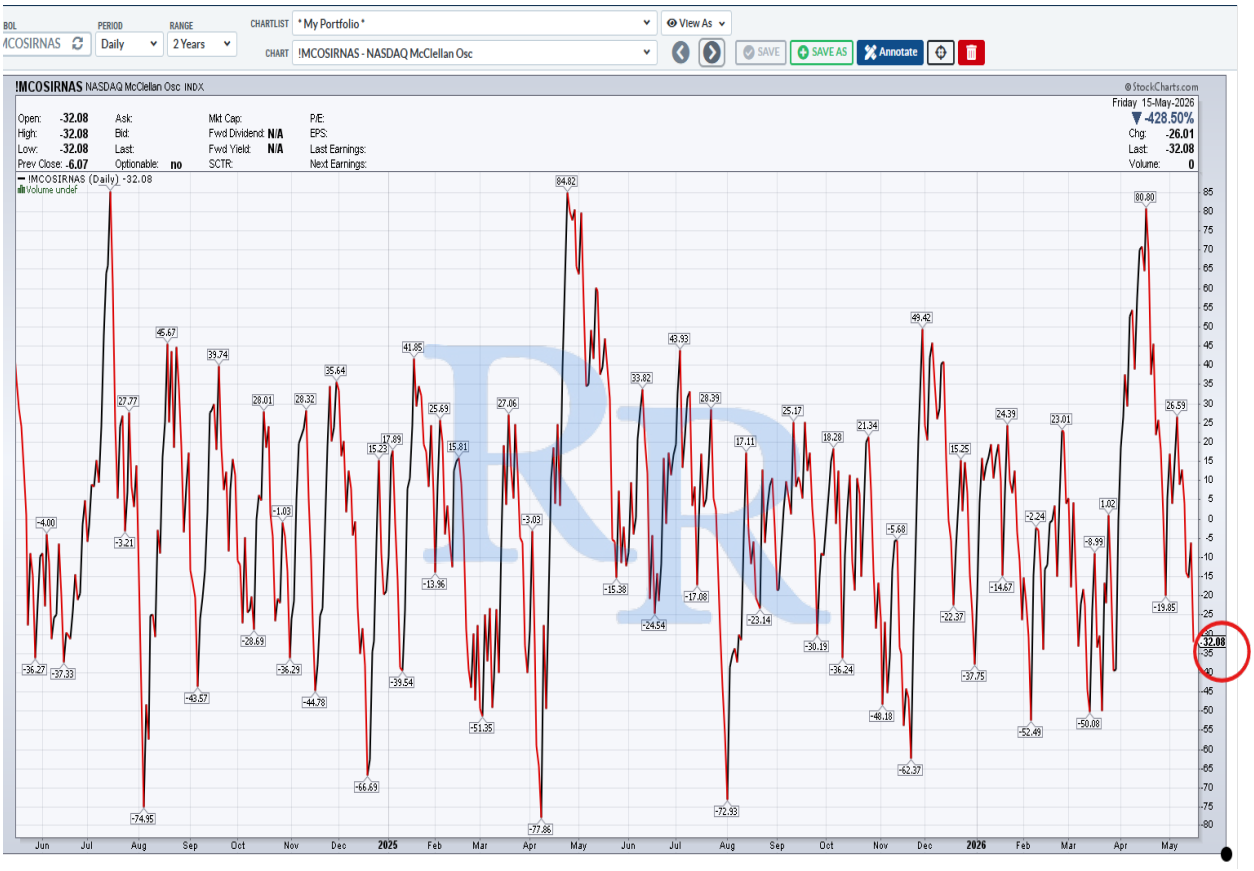

Russell 2000 was -2.4% last Friday, much worse than NADSAQ's -1.54. Holding above $2800 support is important.

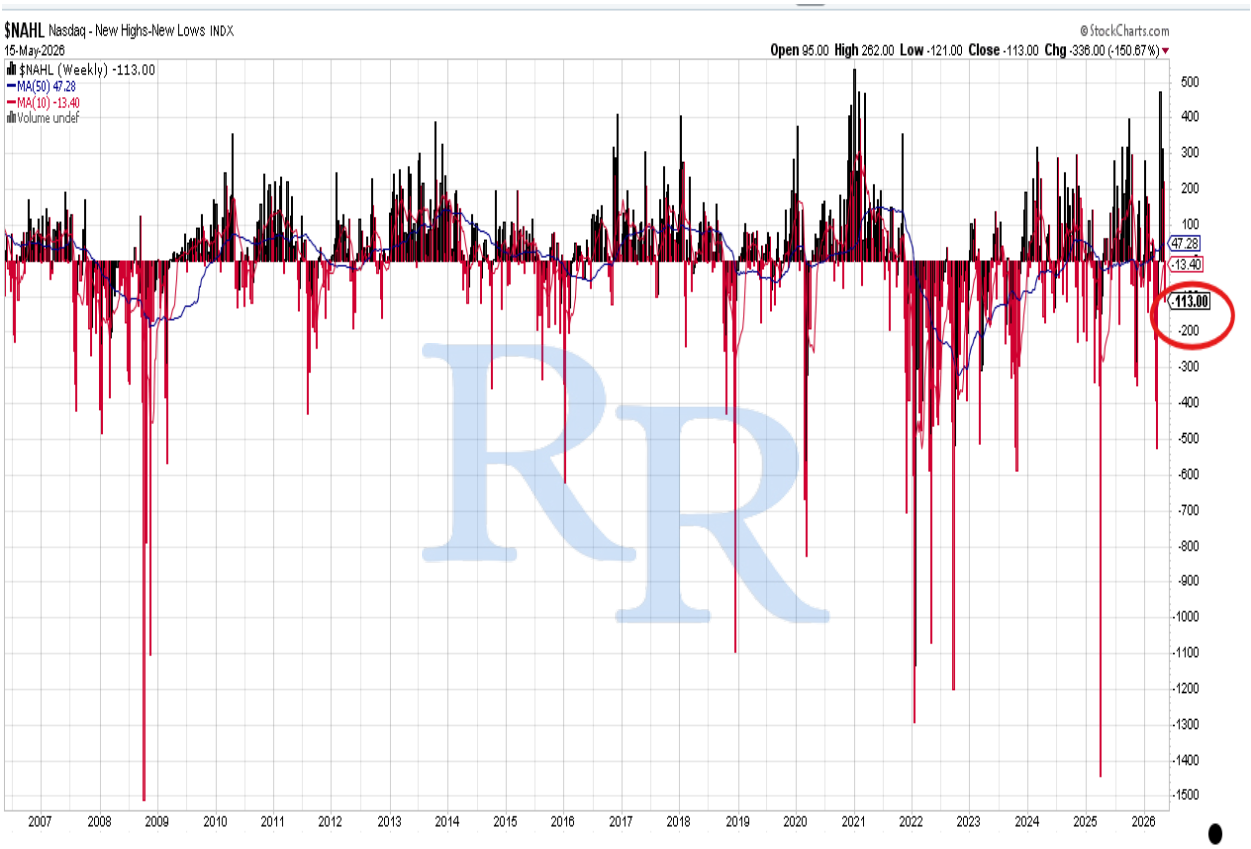

IWC looks just like NASDAQ.

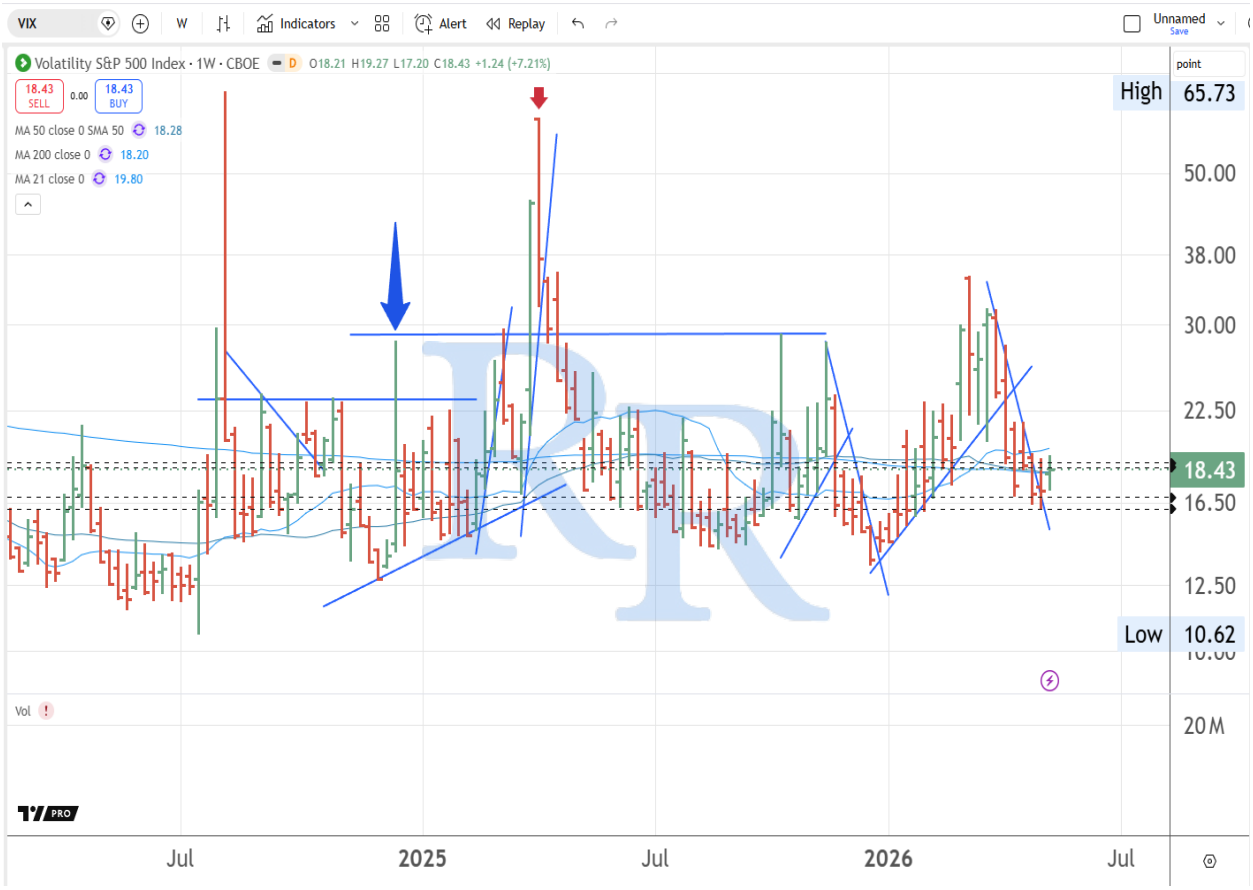

NASDAQ Market Indicators: OB/OS needs to get down to -700ish before we can lean into it. The put-to-call is getting complacent and flashing a subtle caution signal.

The McClellan Oscillator is close to getting oversold while the NASDAQ is pinned at new highs, signaling the market has weak breadth. This is not deadly but a caution.

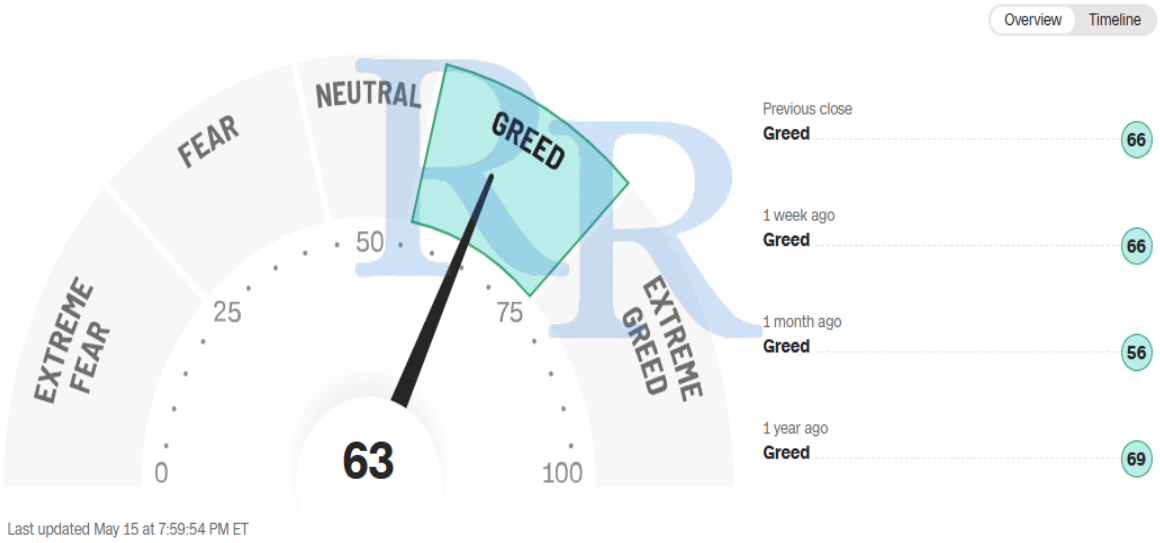

-113 net new lows confirm the market's weak breadth.

VIX is in a downtrend but remains cautionary and elevated. This is far from a single-digit complacency condition, which I think we will see many times before this wave of the bull market ends.

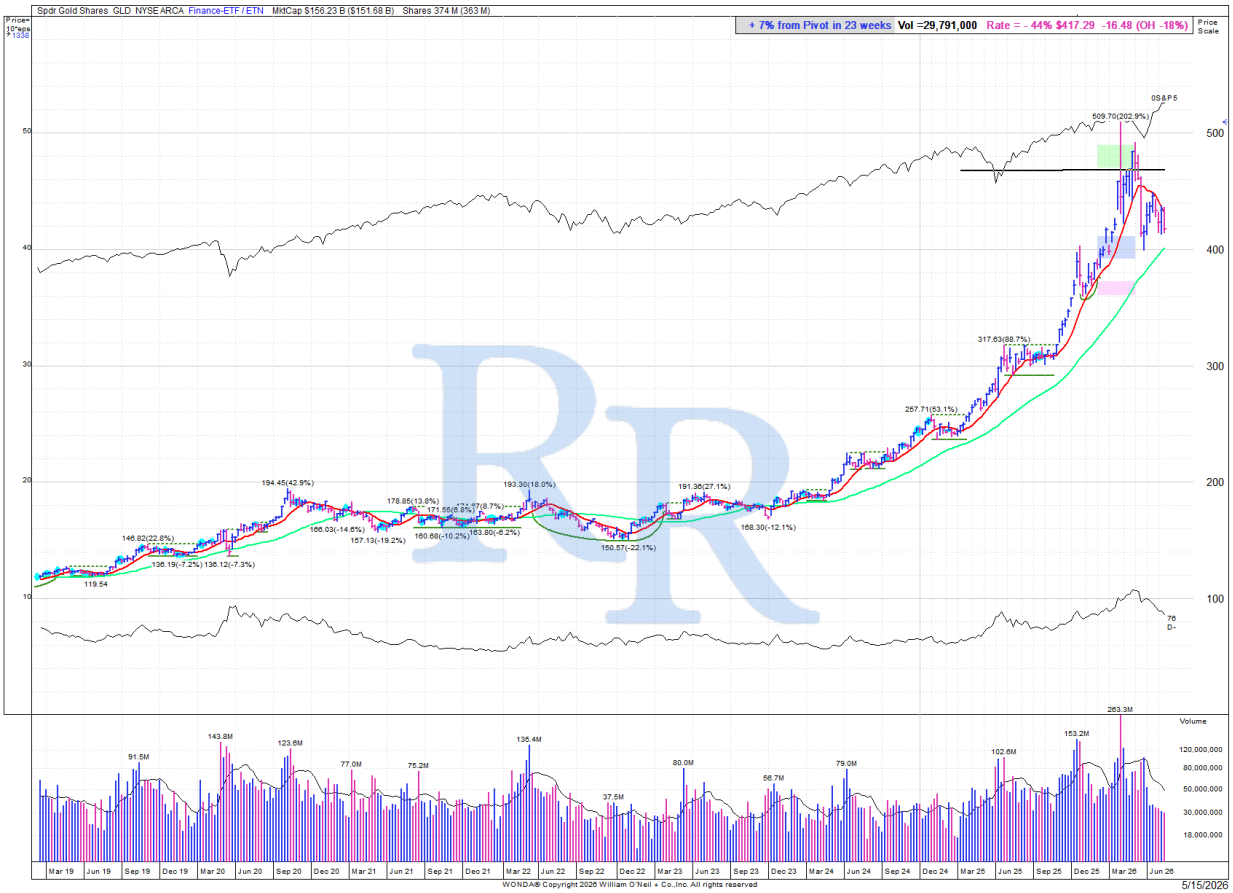

Fear & Greed Index

What emotion is driving the market now?
Learn more about the index

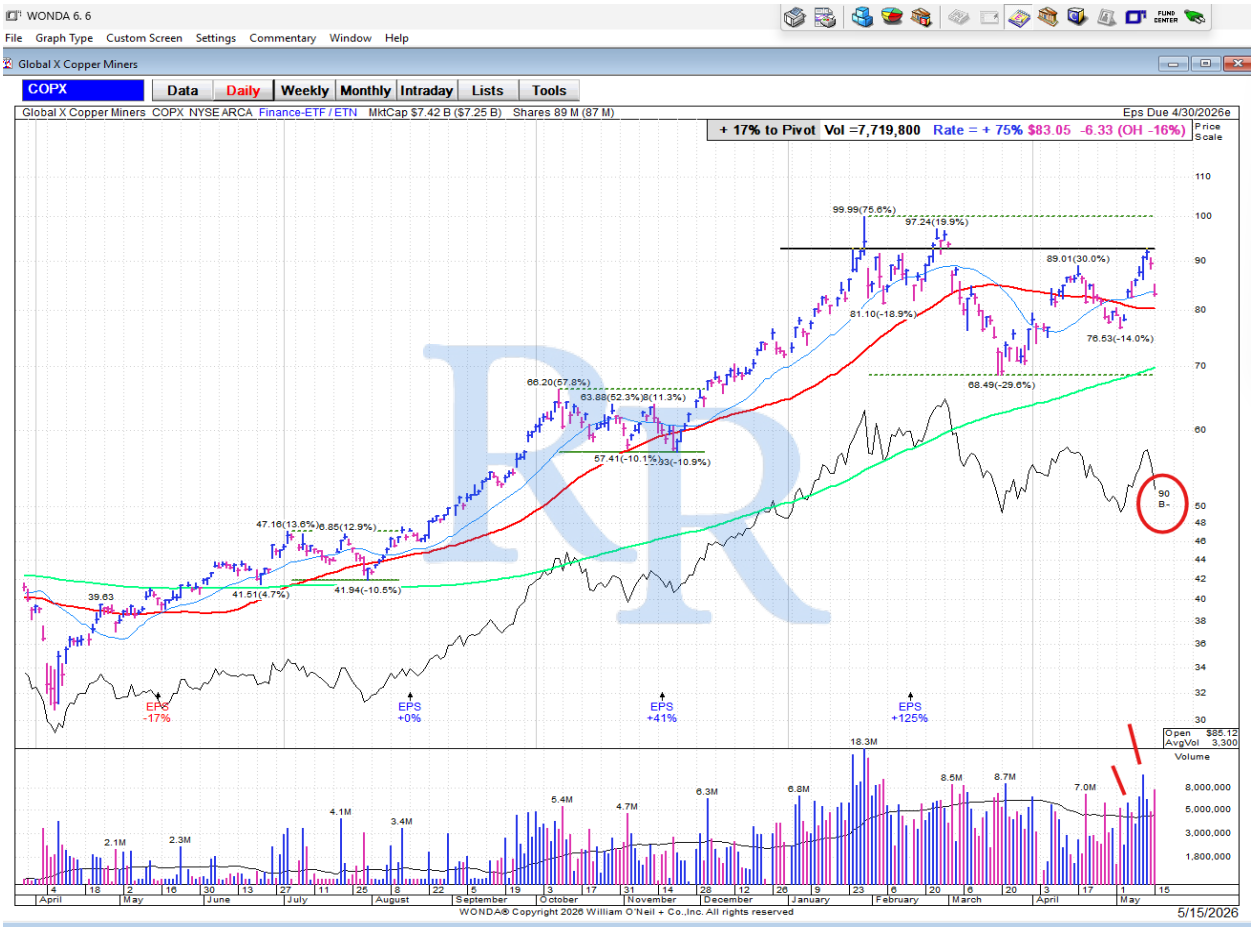

Last updated May 15 at 7:59:54 PM ET

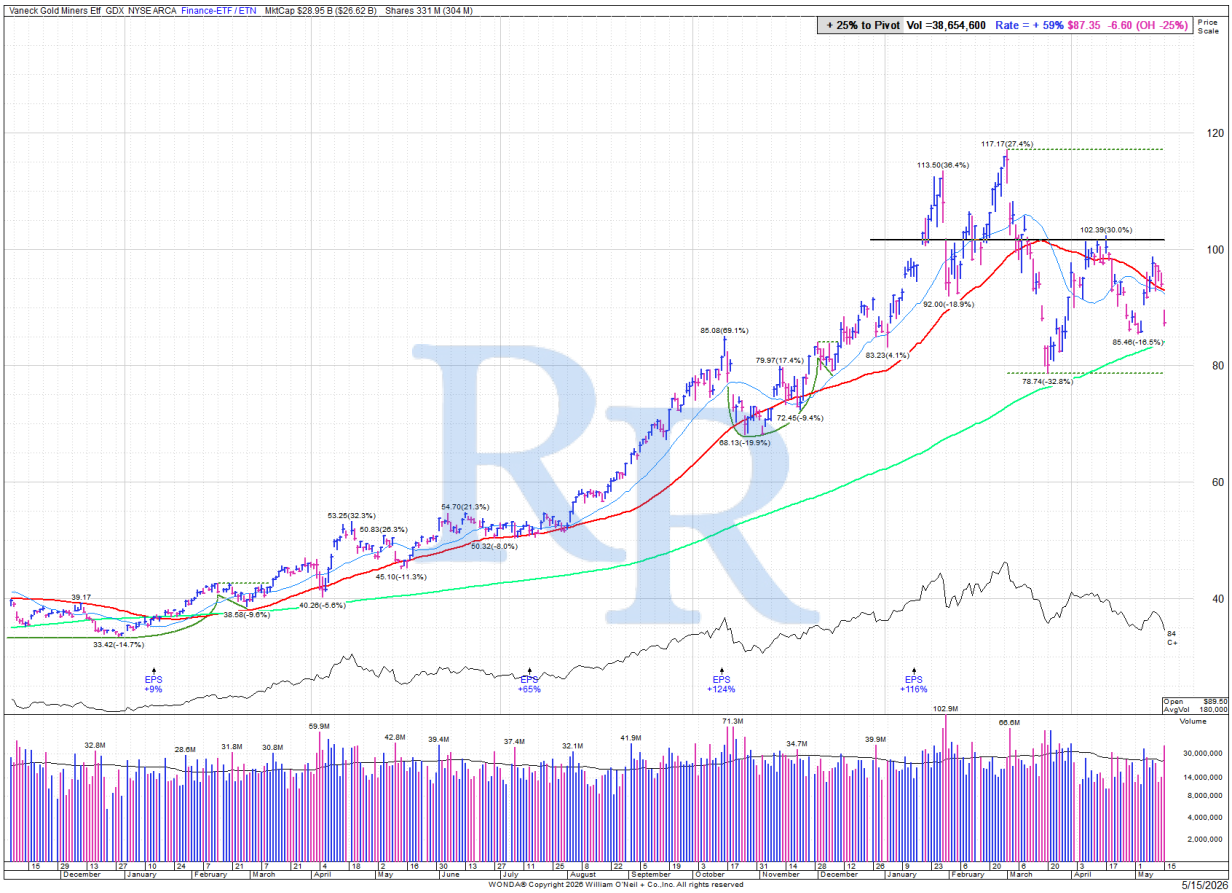

Semis are frothy.

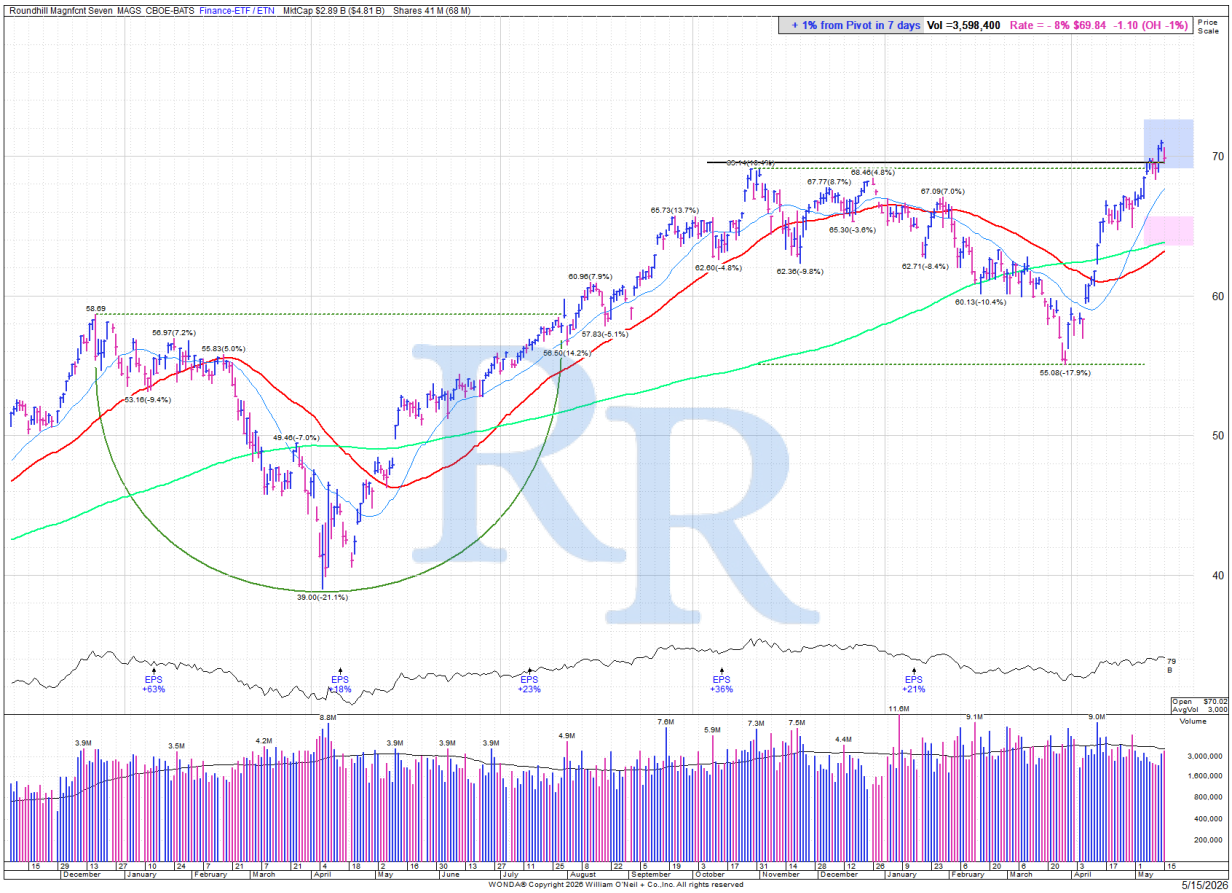

GLD broke badly lower last week. Continue to avoid for now.

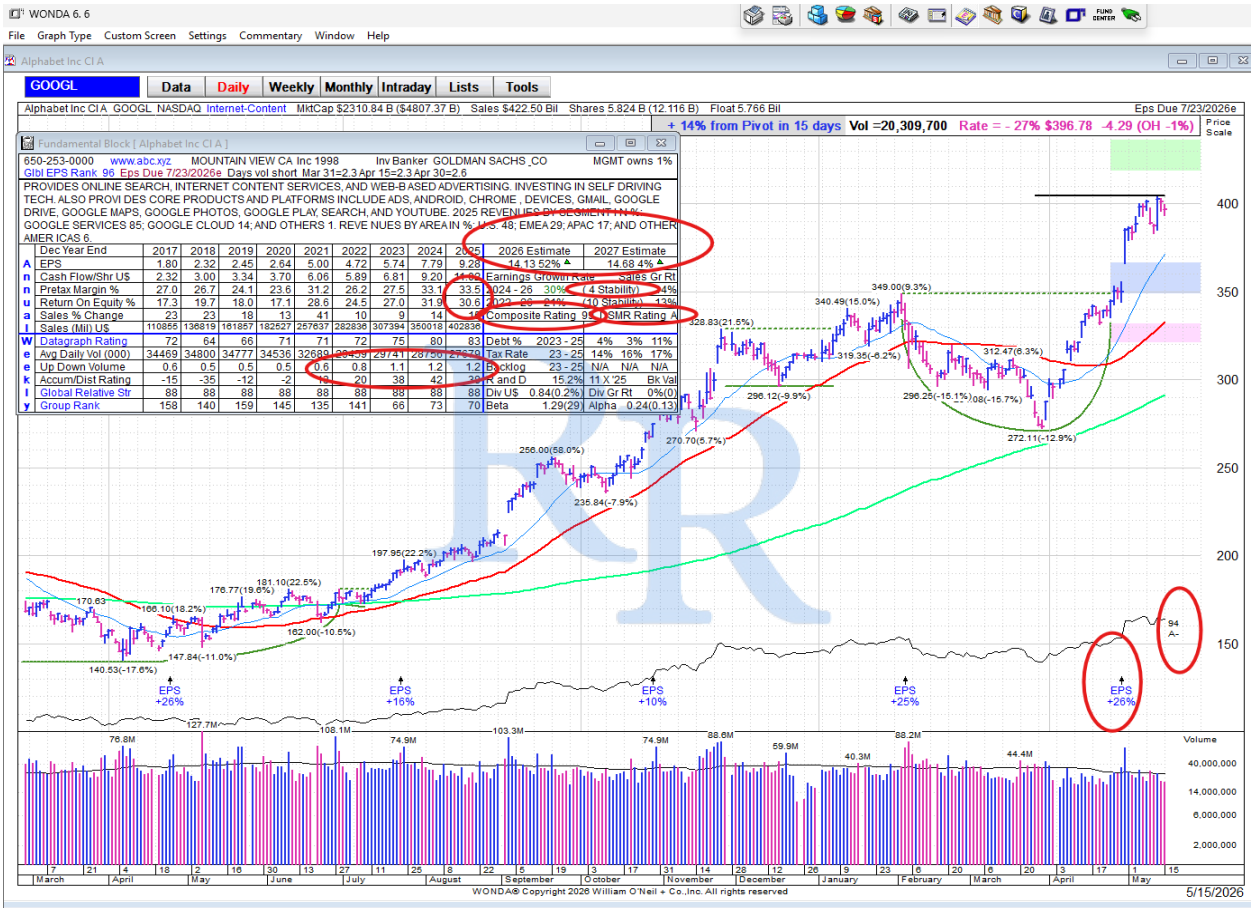

COPX: I have become very interested in copper. Pivot is over $93.00.

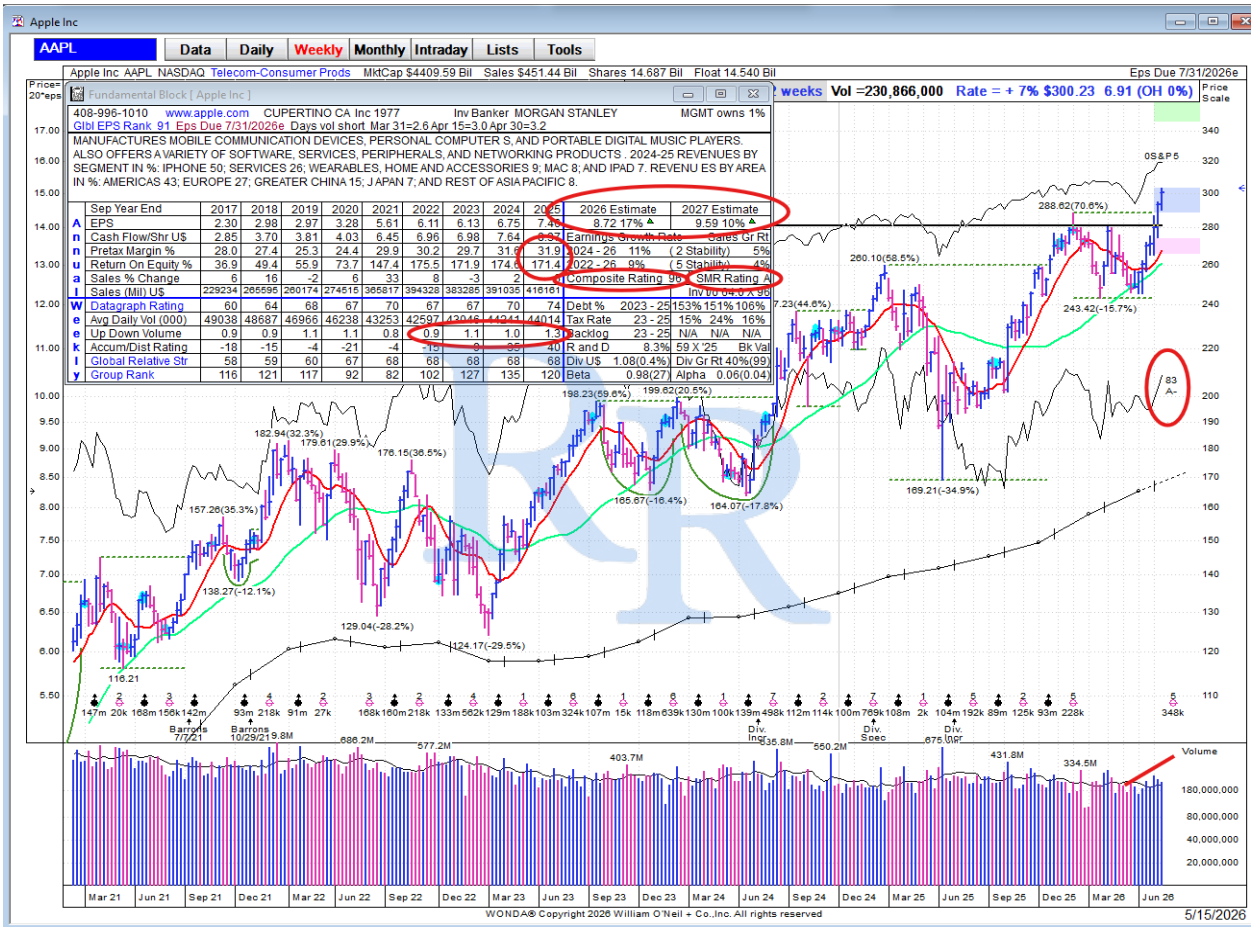

GDX: Avoid for now.

MAGS: Helped by AAPL, NVDA, and AMZN.

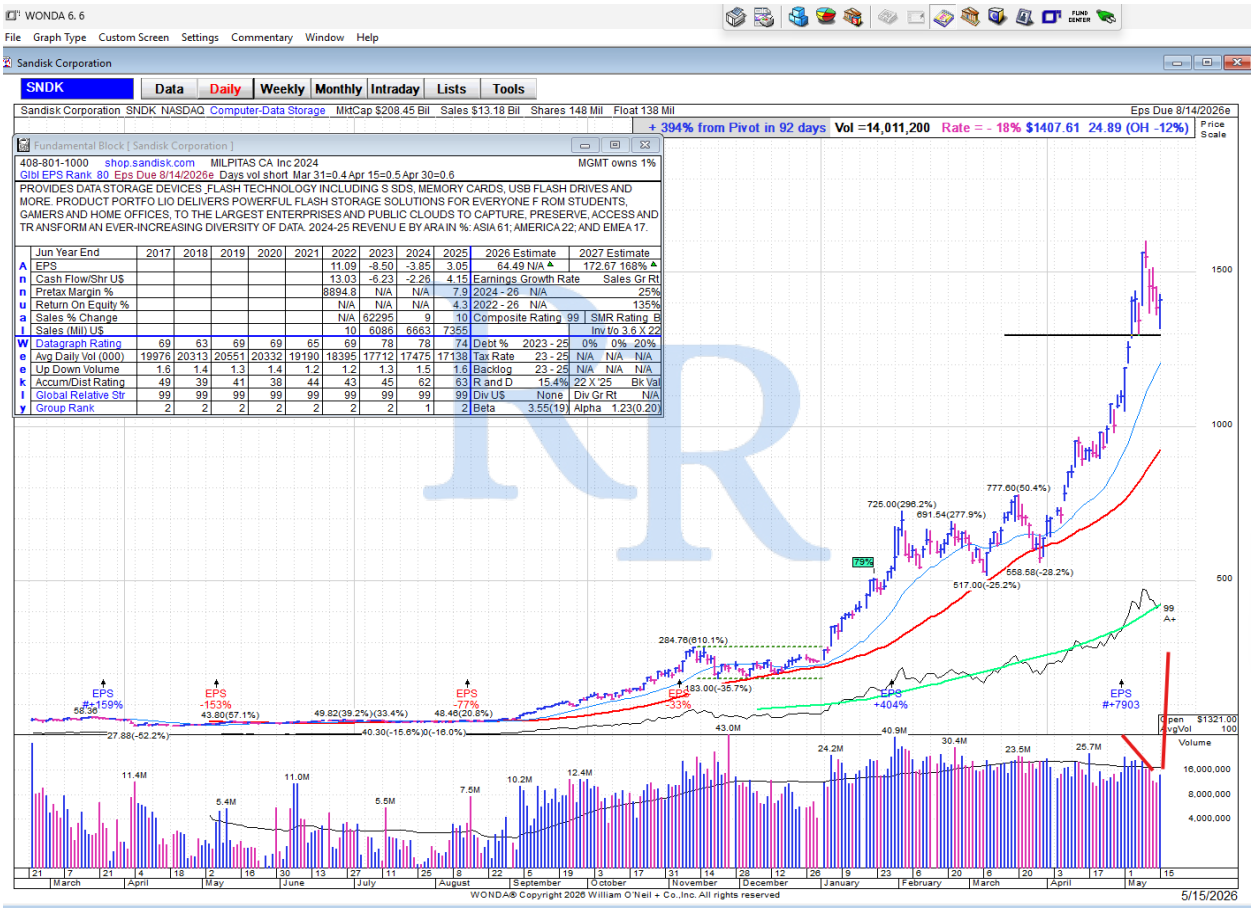

GOOG: The Star of the Mag7.

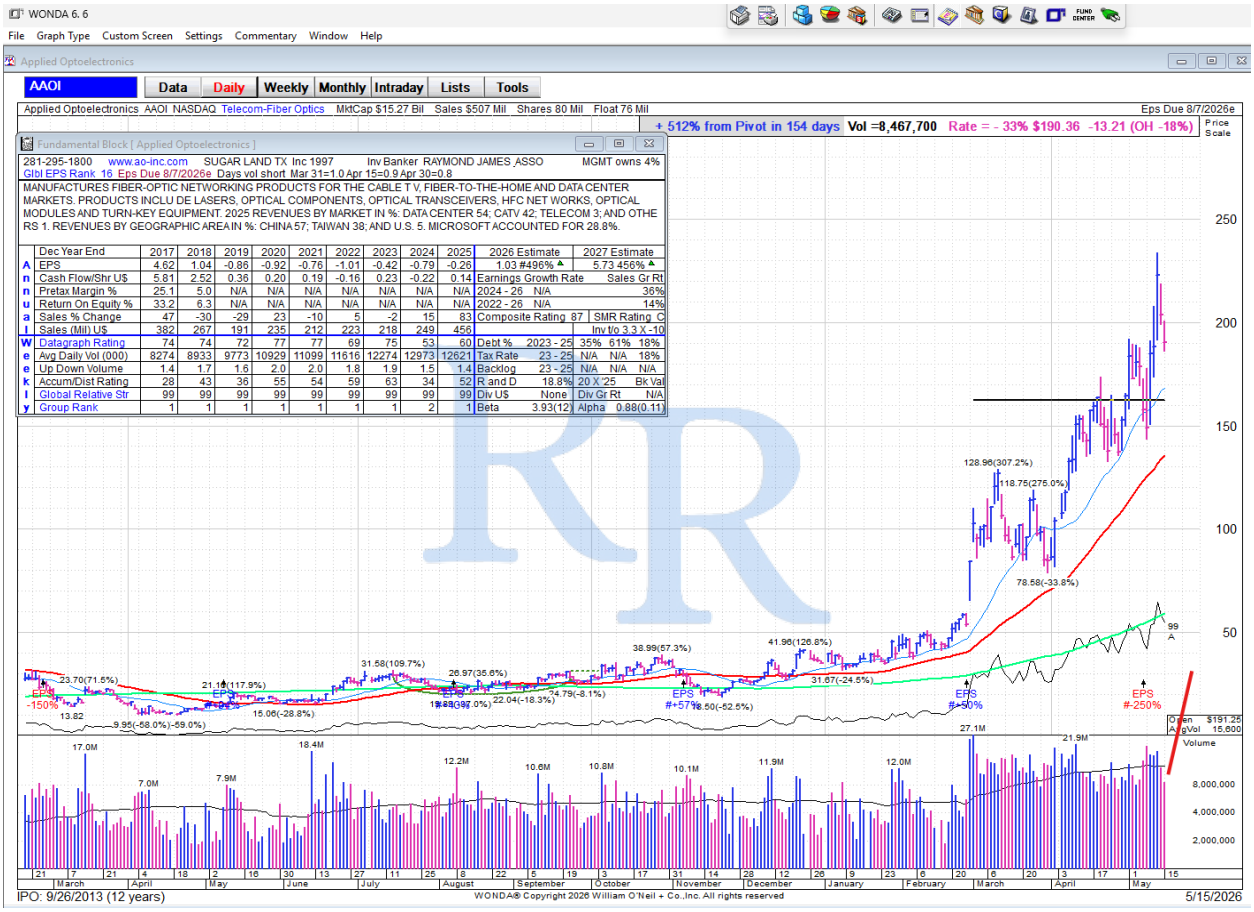

AAPL breaking out into all-time new highs is exceptionally healthy for the general market.

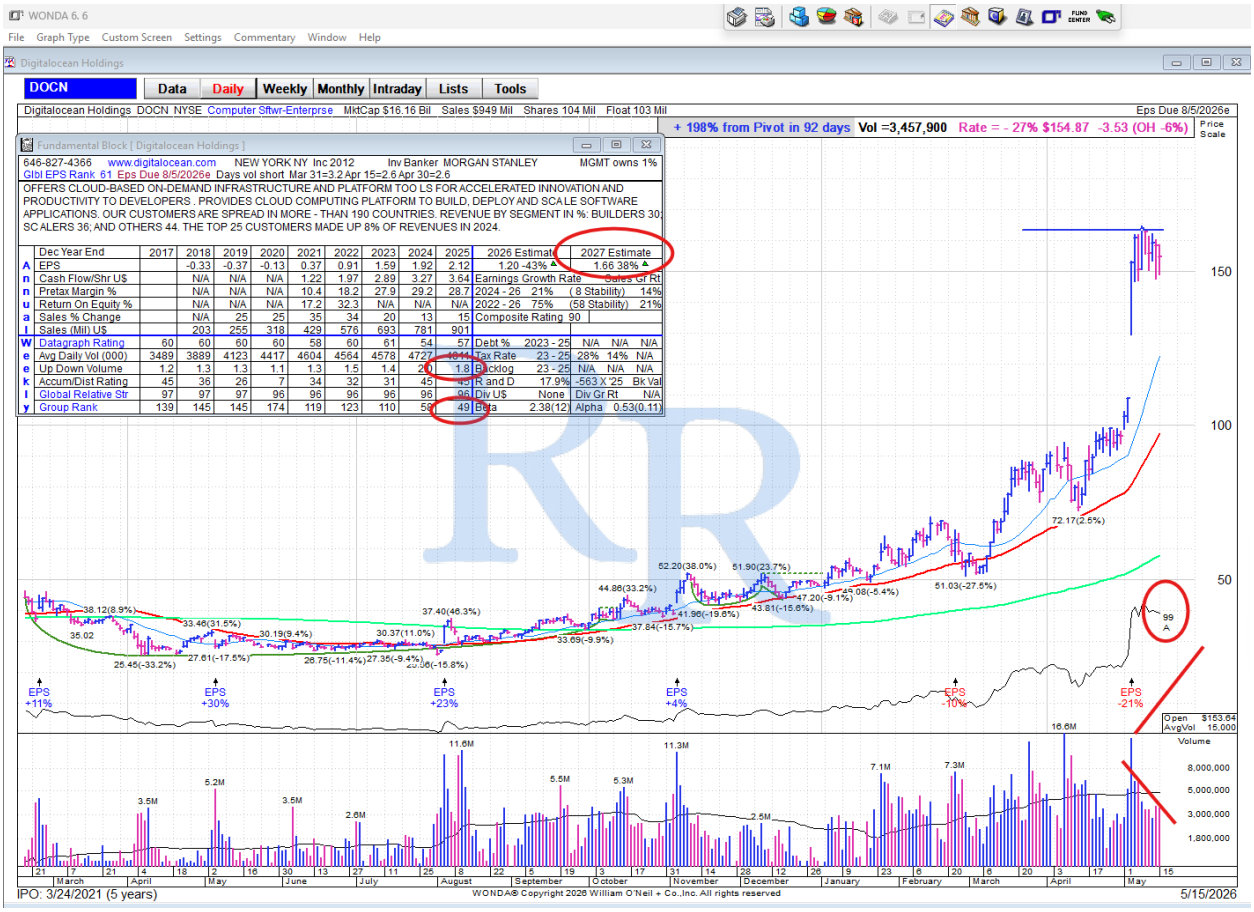

▼ Potential TMLs – Stocks of Interest

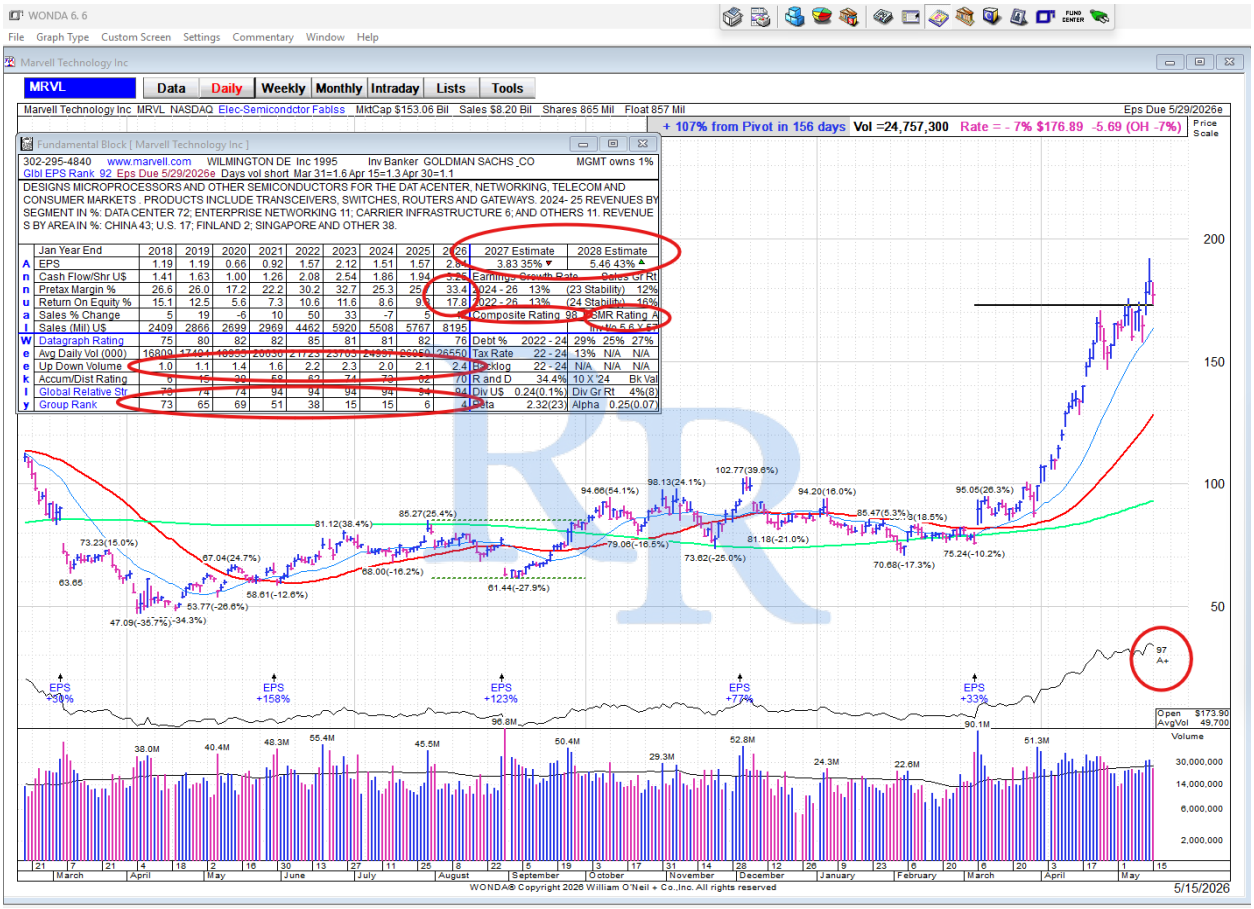

SNDK: I loved Friday's pickup in volume on the first up day after a low-volume digestion. SNDK continues to trade technically healthy.

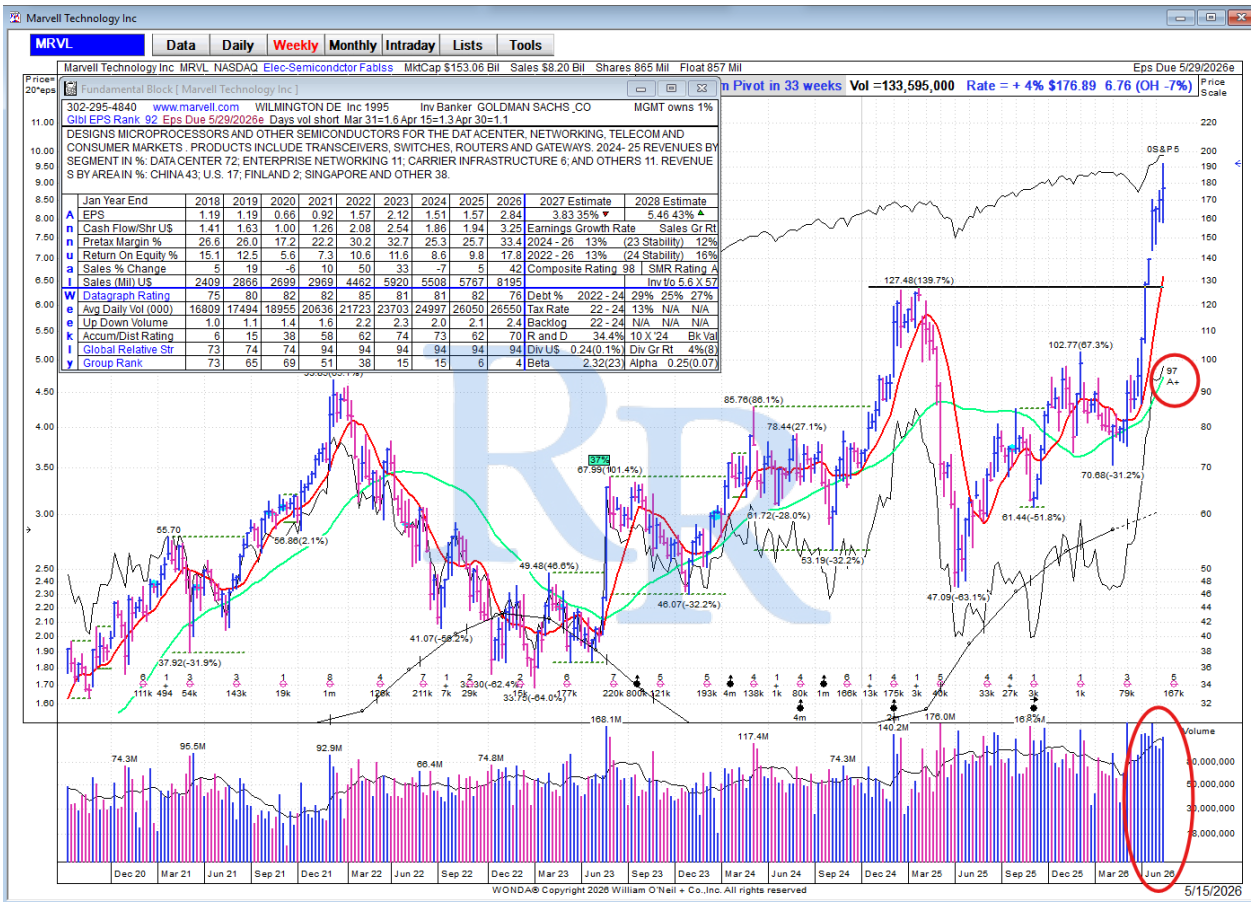

AAOI was hammered last Friday, but on a -33% decrease in volume, which is healthy for this wild swinging trader.

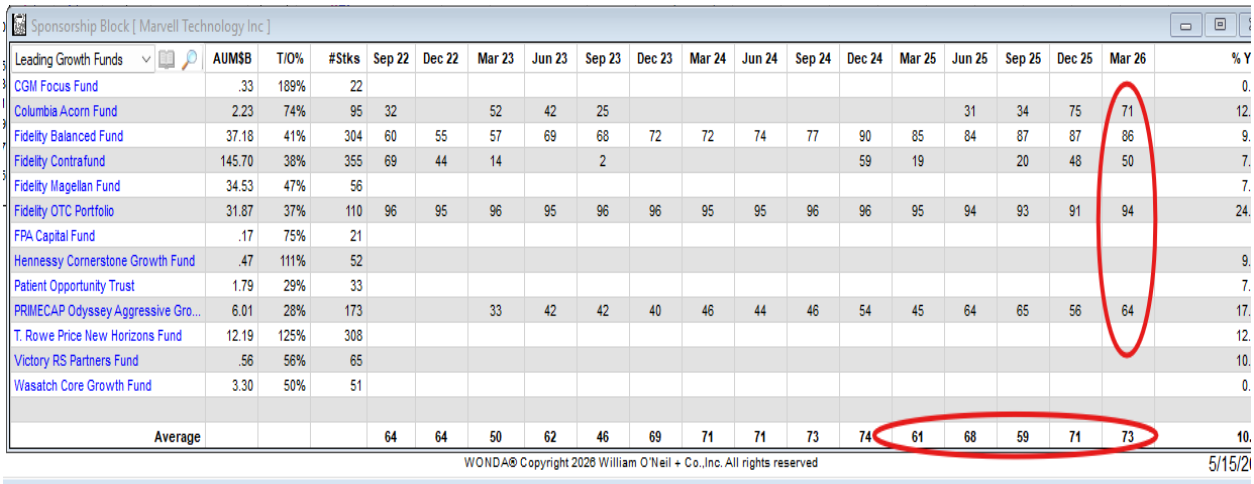

DOCN has crummy short-term earnings, but it is forming a tight flagish digestion that would be good for short-term traders/scalpers. 99RS, 1.8U/D and price says it's looking past the short-term earnings snafu. Pivot over $165. Higher risk.

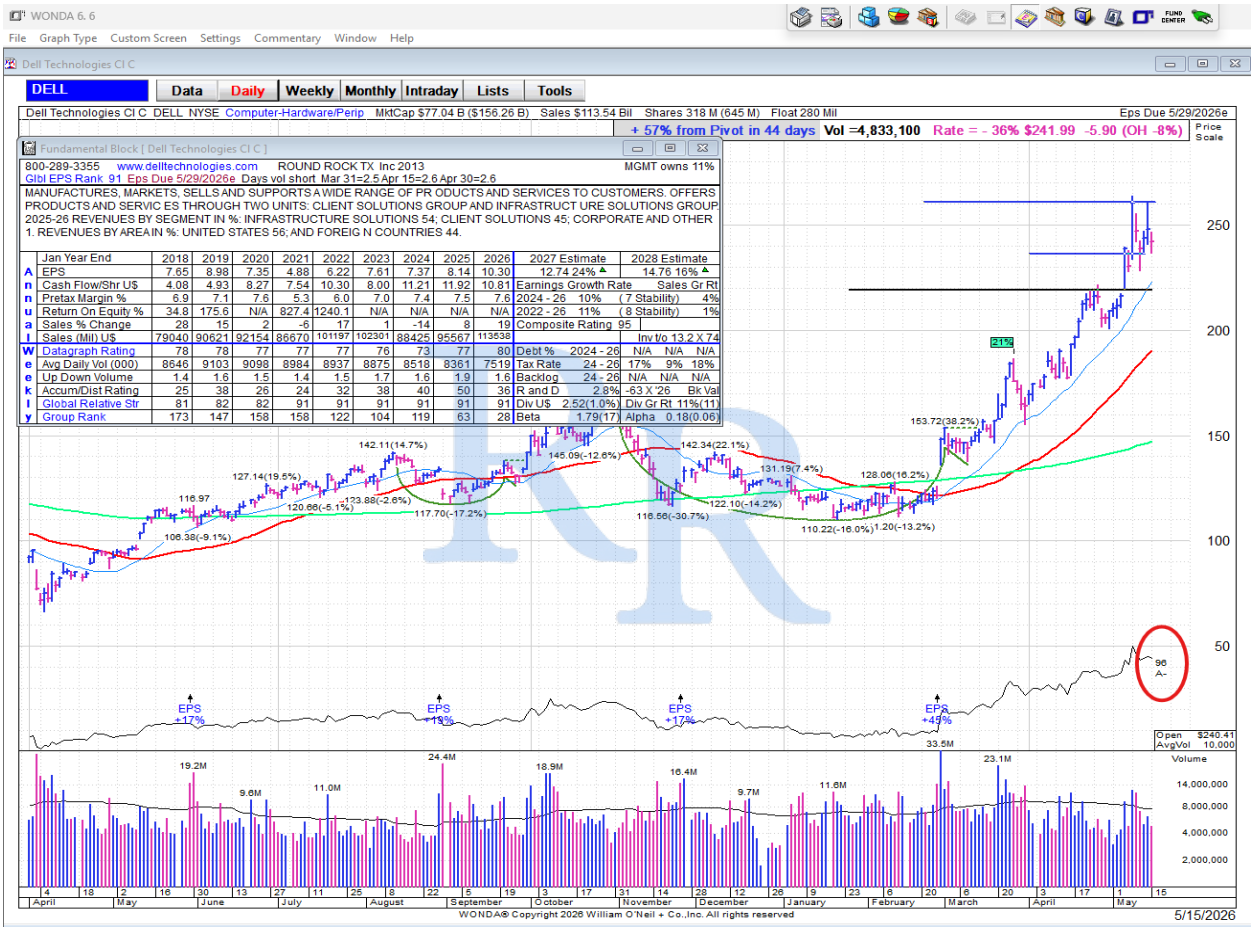

MRVL the ***2.3 U/D* is insane accumulation for this new TML!!!! It looks great, but not actionable. It's all about GPUs to CPUs.**

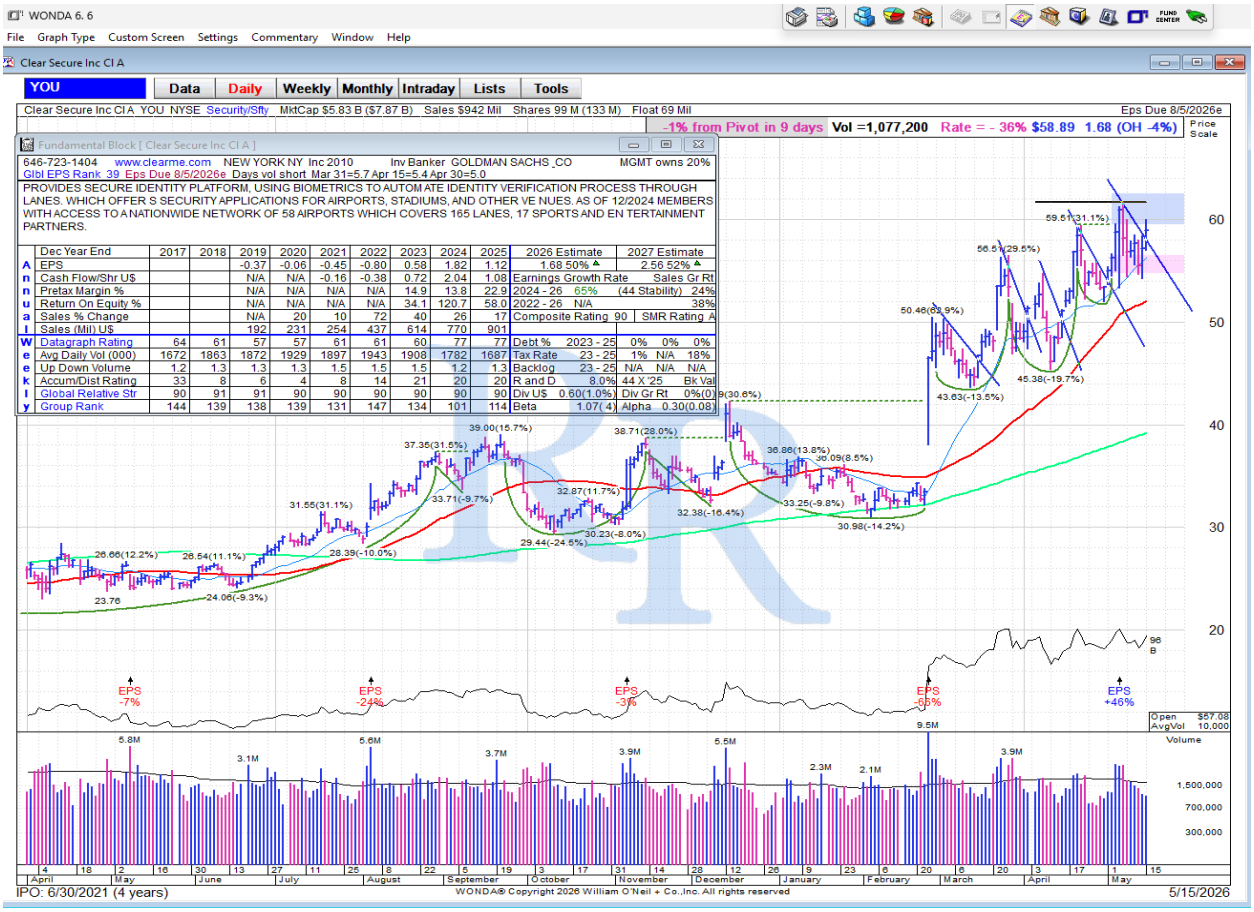

MRVL Weekly: 9 weeks in a row up, out of a big base!!!!

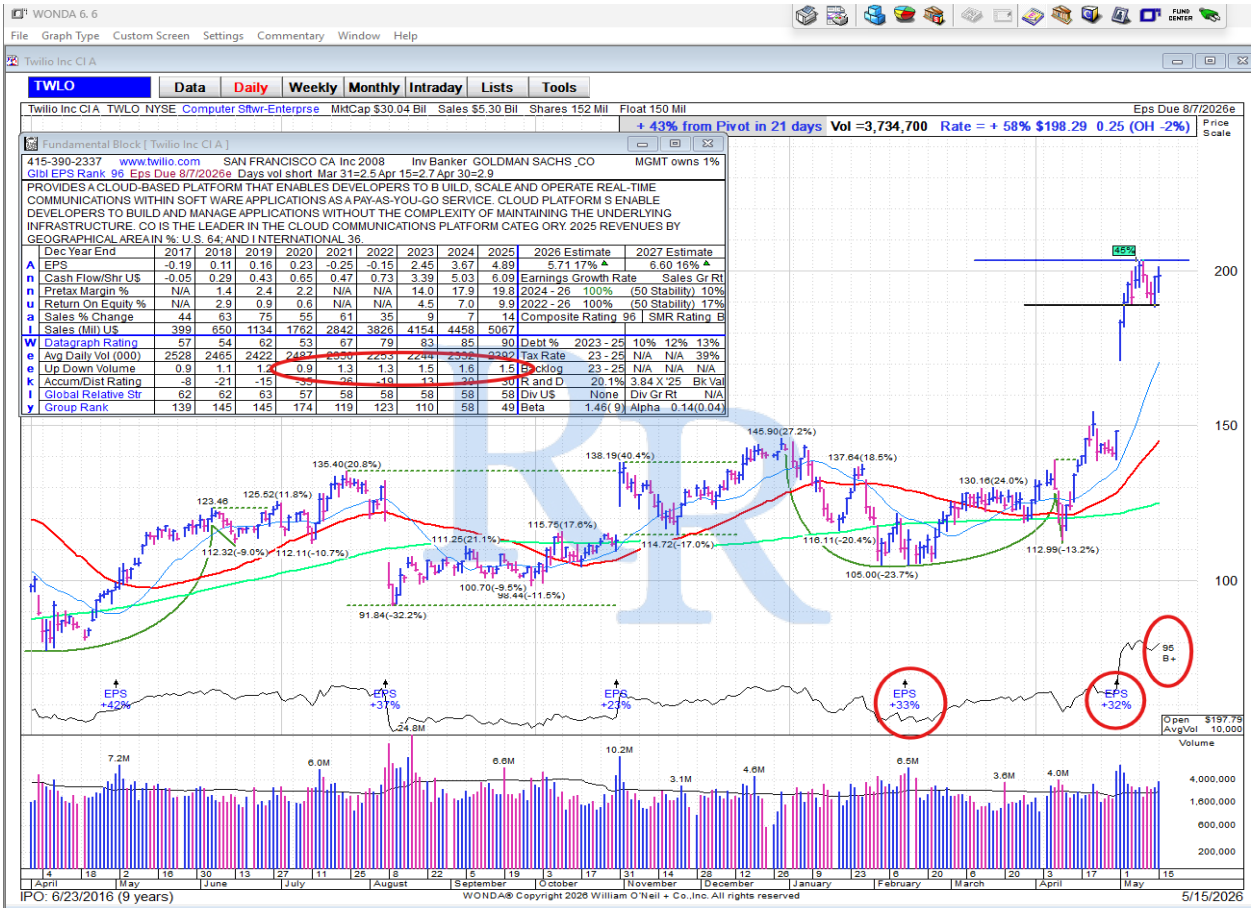

MRVL is an institutional darling.

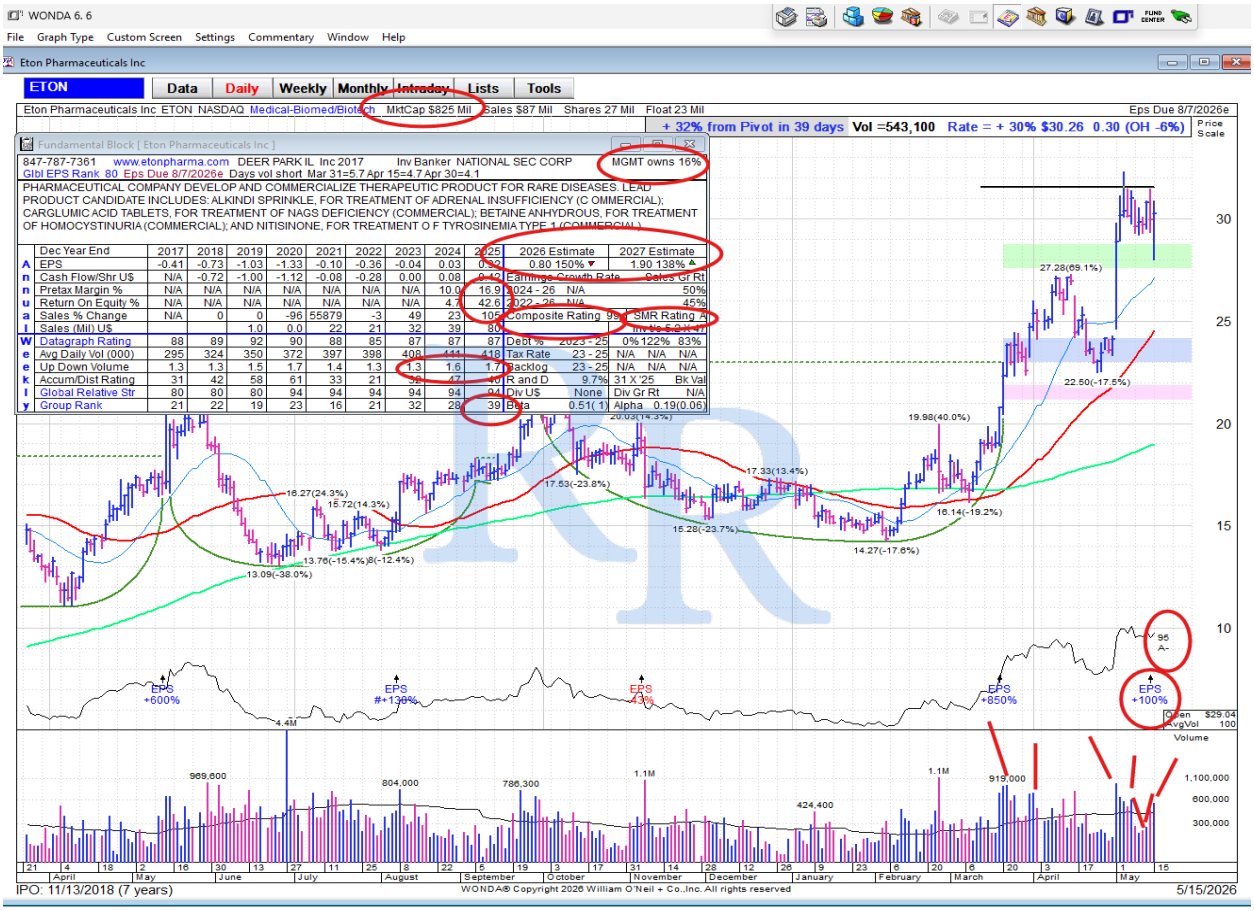

DELL may have started an actionable digestion. Wait for at least two weeks tight = 2WT.

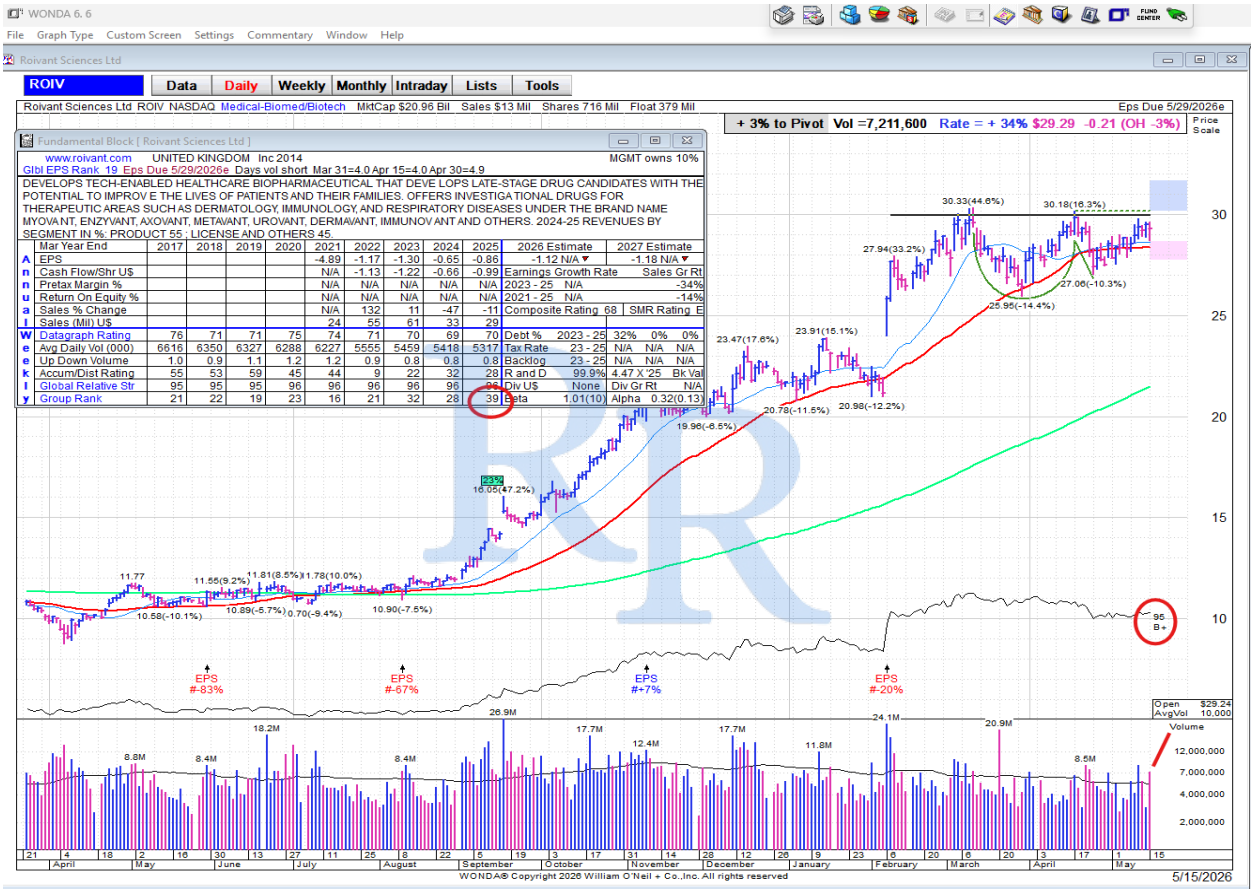

YOU: This name has been a nightmare, but it appears to be setting up a multi-leg ascending base. I am WOWed with the myriad applications for this technology and the massive TAM. This is a high-risk name.

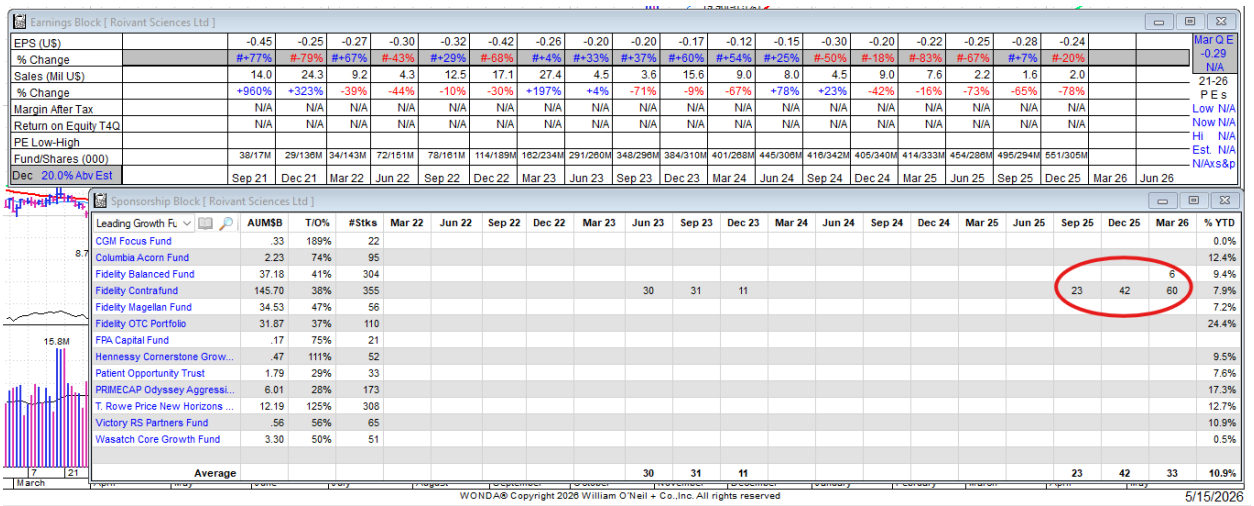

TWLO: Trader alert. Flag in progress for this forgotten name. Pivot is over $204.00

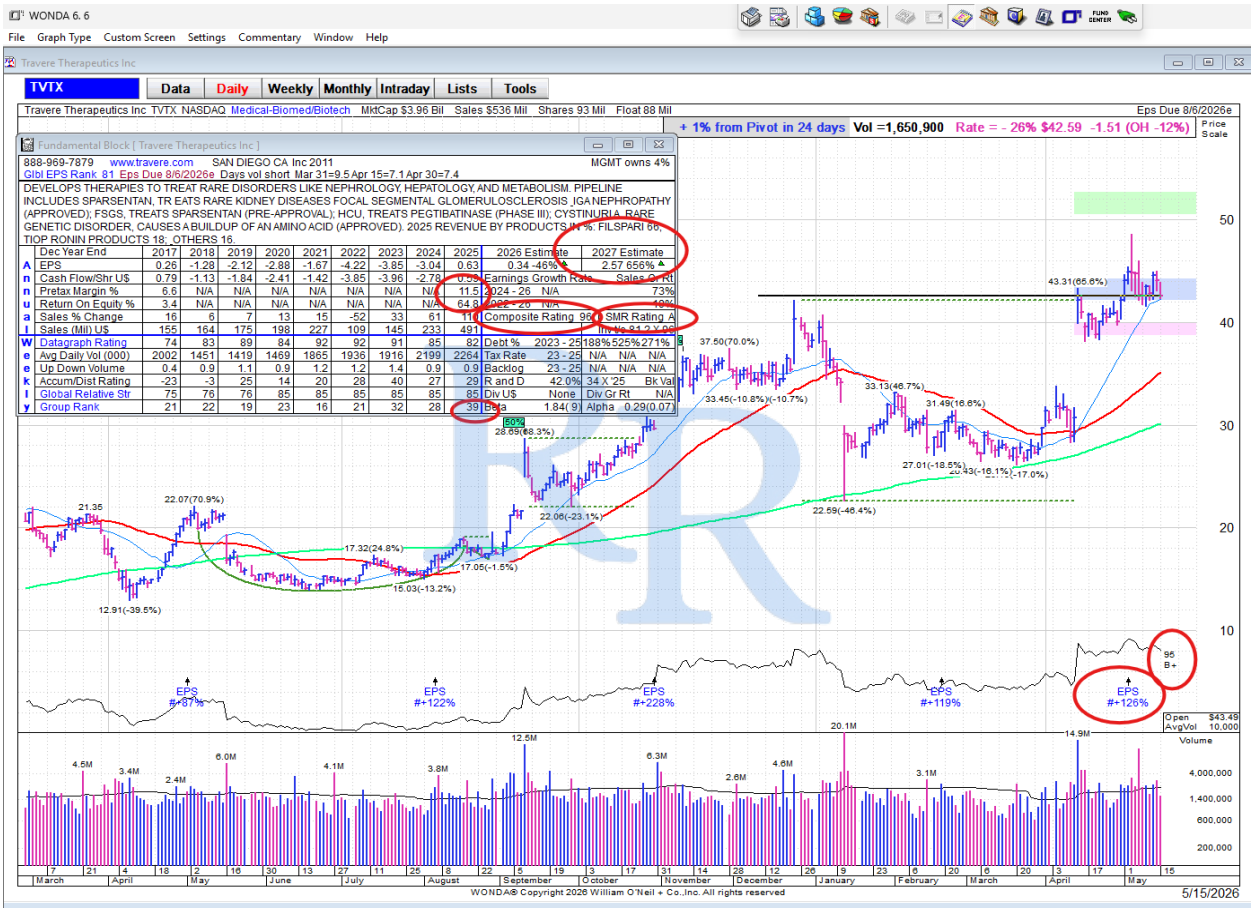

ETON: It's such a flea, it's embarrassing to comment on, it's literally a penny stock. But its technical picture, last Friday's upside reversal and Steller volume signature, coupled with 99Comp financial metrics and 16% insider holding make it irresistible. New pivot for cowboys over $31.60 and again into new highs. Caution. If it was liquid, it would be an institutional darling but due to its uber flea nature, there are zero notable holders.

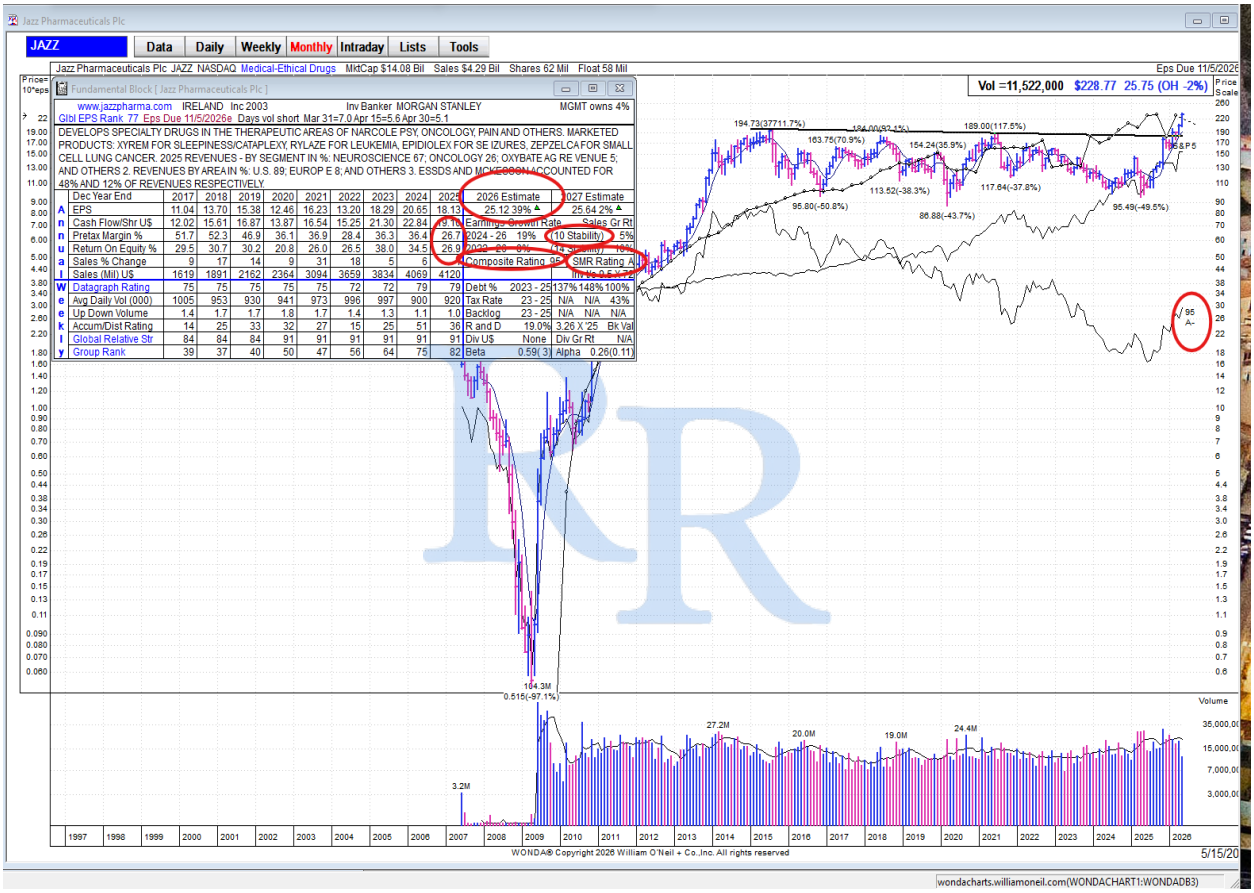

ROVI: No sales or earnings precluded me from posting this name in the best ideas section, but the chart looks good, especially last Friday's upside reversal on a mini spike in volume. Cowboys only. Pivot is over $33.45.

TVTX: I have no idea what they do, but +656% EPS estimate is eye-popping. It's testing its pivot right here which in normal markets is common, but we have all become accustomed to everything exploding higher.

JAZZ looks great.

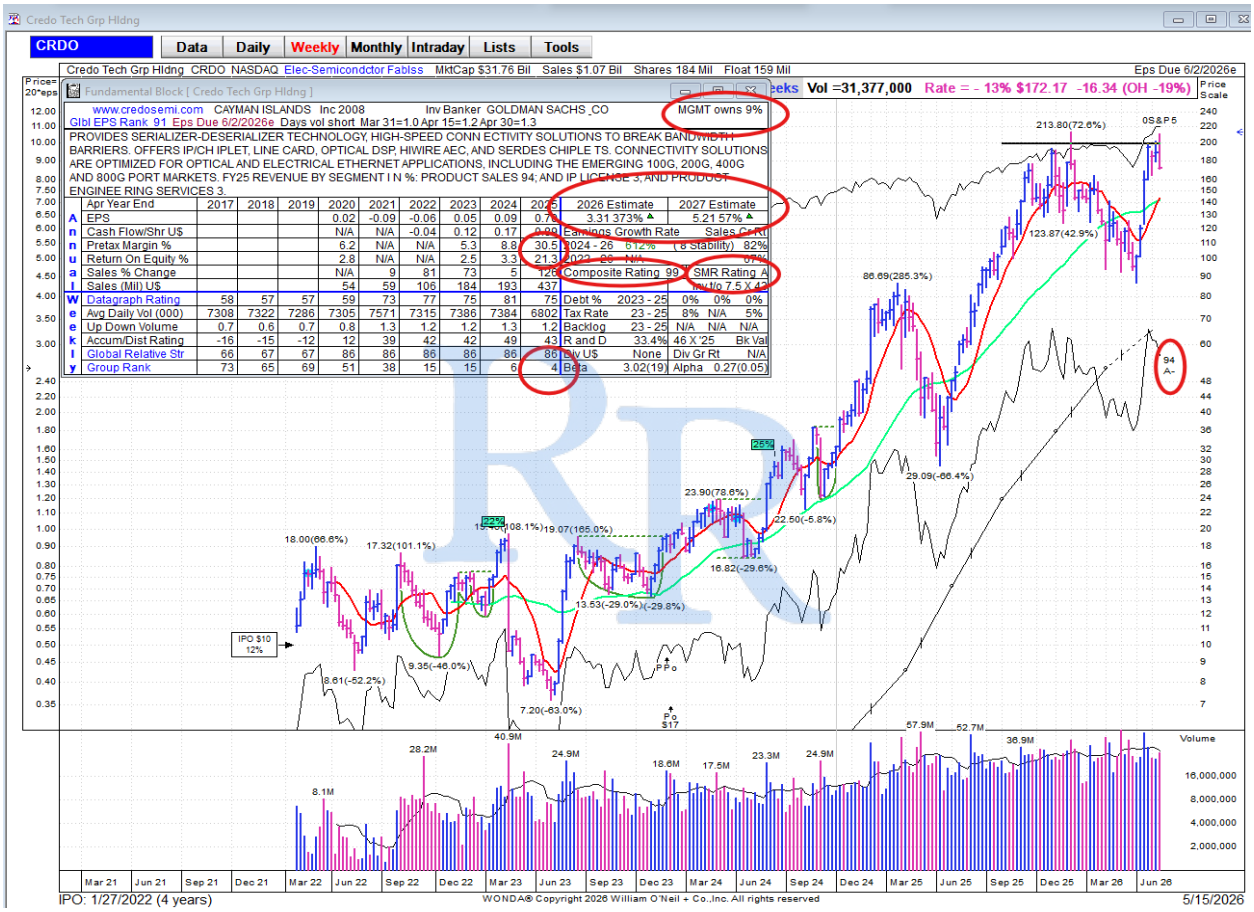

AXSM: It's impossible to ignore the eye popping +395% EPS estimate and MGMT owns +22%. Mini pivot in progress.

T. Rowe keeps building!

CRDO: I am shocked CRDO failed the pivot. Risk management will always be the zero defect, job #1.

SLV had an ugly gap-down stop-out last week. With time, I think a breakout over $81ish is possible. But for now, it's in the no-go zone.

Other names for review:

INTC: I hedged last week due to INTC's excessive level of extension. Now that it's -18% off its highs, I reduced the size of my hedge. I would expect some more digestion before higher prices.

NBIS is a new leader, despite having no earnings. The volume signature says higher prices are ahead. It's now extended but trading tight.

MU: It looks like digestion has finally set in. Overall, I see digestion for the memory names.

NKTR has undercut the pivot and 50DSMA; I would bail.

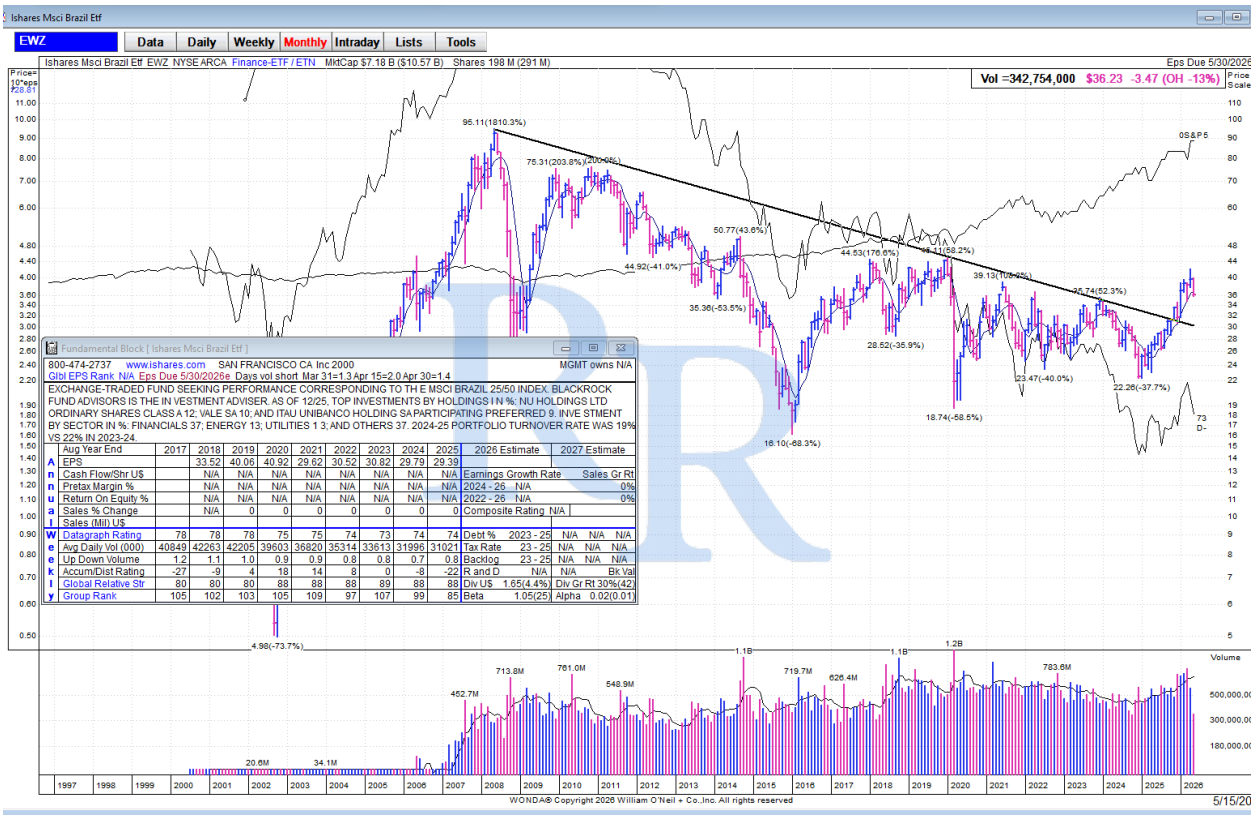

RKLB looks nothing short of spectacular, but it's extended. The market does not care that it's a no-earnings name. Hedging part of a position soon would be prudent.

TER is threatening the 50DSMA. I would have this name on a short leash.

PTGX looks good but illiquid.

ARM is loose.

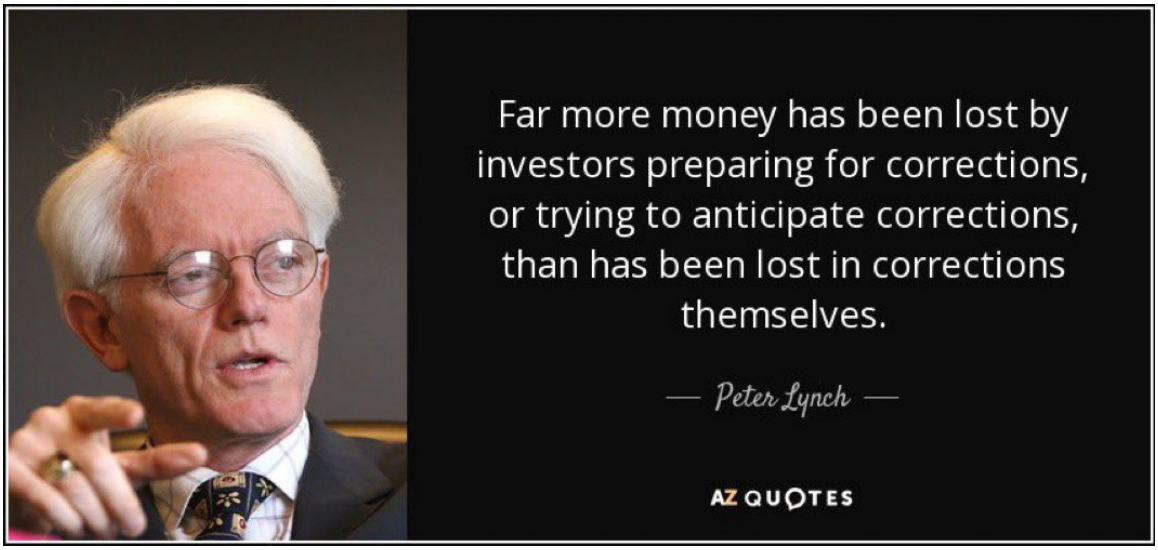

▼ CHINA and Other Countries

EWZ: Long-term breakout is in gear.

https://x.com/Ken_LoveTW/status/2055306432367800785

▼ Bill's Golden Rules

▼ Random Thoughts

This week is ALL ABOUT NVDA's earnings this Wednesday. If treasuries hold, I would not be shocked to see the market stall in anticipation of NVDA's earnings report.

I have been way too negative due to the levels of extension in NASDAQ and semiconductors. What tripped me up was building up hedges on subtle churn days rather than waiting for clearer signals to get defensive. Note this week's Golden Rules section: Even after 40 years of experience, mistakes will be made. The key is how fast you realize it and get back in harmony with the market and the leaders.

China's Xi and Trump's meeting resulted in no major positives on Friday. The market sold off on average volume. This is not enough to make me bearish. I will need to see distribution or at least a churn day to get bearish and ramp hedges on the indexes.

The eagerly anticipated IPO of ***Cerebras Systems (CBRS*** *311.07, +126.07, +68.15%) added to today's AI momentum, with the upsized 30.0 million-share deal pricing at $185 per share, well above the already raised $150-$160 range, before opening at $350 for an 89% first-trade gain. The deal underscores the huge appetite for pure-play AI infrastructure exposure, but it also leaves investors staring at a nose-bleed valuation with a market cap near $70 billion and a price-to-sales multiple close to 140x.*

CBRS is a high-quality IPO that needs to be watched of a first stage base. At this time, institutions will only pony up for the highest of quality IPO's, this is a sign the market has a long way to go before this wave of this cycles top is close. Near the end, the brokerages, the distribution machines, will be packaging up any P.O.S. AI an AI wrapper and shoveling it out to eager, greedy retail rookies. We are likely years away from conditions like that.

▼ What could go wrong?

GREED & fear: The Fed's approaching stress test - *The lesson of history is that markets tend to test a new Fed chairman. The latest US inflation data has increased that possibility. US CPI rose by 3.8% YoY in April, which caused the 10-year Treasury bond yield to test the 4.5% level, the breaking of which GREED & fear continues to view as the commencement of a stress point for stock markets with the 30-year yield already above 5%. @Jefferies*

CRUDE is erratic, news-driven, but the loose digestion remains in an unmistakable uptrend until it undercuts $80.00. I know no one is expecting a breakout over $190.00, and if it happens, all bets on equities are off as rates will likely soar. Crude could also become the trade of the year. If crude was going lower, O&G stocks would be sniffing it out, and they are not right now.

Last week's two-year yield breakout is not to be taken lightly. It was the largest factor in Friday's break lower.

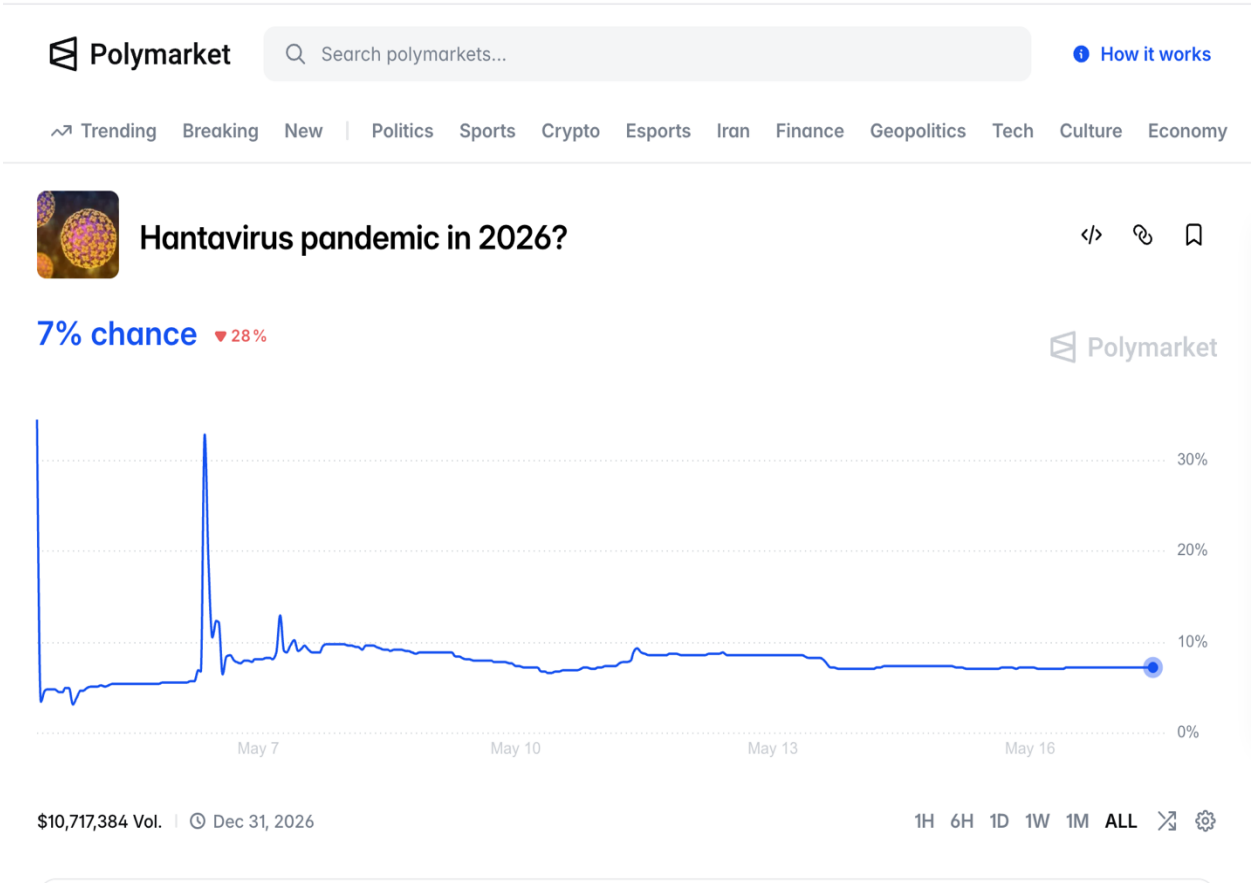

The 10-year yield soared higher. Tonight's futures open will be interesting.

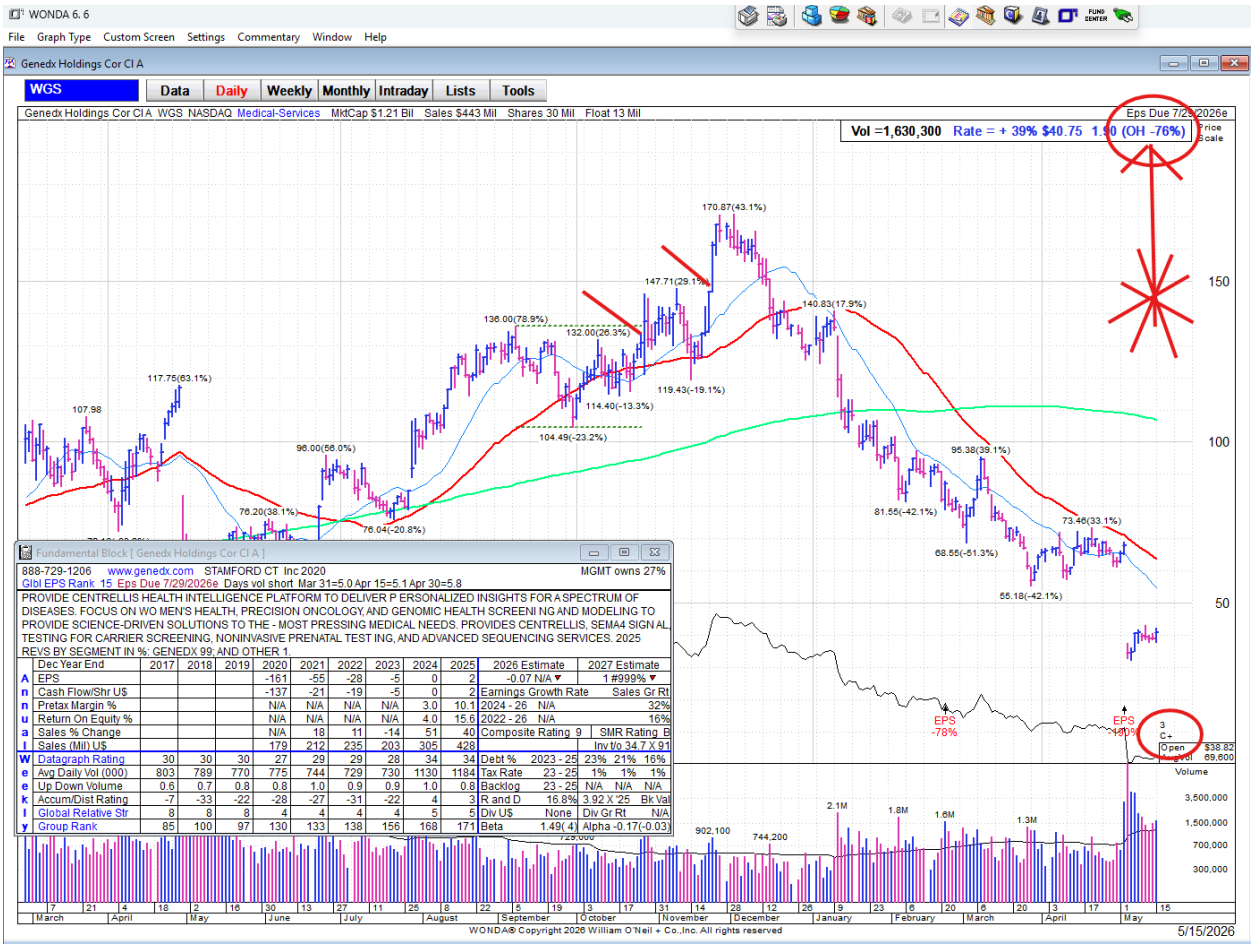

- ***Inflation Pressures Are Building.*** *April's core CPI came in a bit above expectations at 0.38%, with core services ex housing (CSEH) at 0.45%. Some of the bounce in core reflected the fading of October's shutdown-related housing distortion, but not all of it. Core goods were surprisingly tame at 0.03% given everything in the pipeline. Wednesday's PPI was very hot with a muted market reaction, led by goods. Core PCE-relevant components were a smidge softer largely on volatile portfolio management fees, but the underlying reacceleration in core PCE has been clearest excluding those imputed measures. On net, we end the week with core PCE tracking ~0.30% for April. Paired with March that's hot enough to force the Fed's 2026 forecast up to at least 2.9%. Thursday's import price data shows surging, faster than peak-covid, capital goods import price inflation. That's in stark contrast to the 1990s tech boom, where imported deflation was an enormous tailwind, and it implies services inflation may be even more of a problem to get back to target because the old core goods anchors build on too optimistic a view. Tariff/war/AI shocks should lift consumer inflation through at least the summer and probably longer.*

- ***The Real Economy Keeps Absorbing the Shock.*** *May's Empire survey jumped to 58 in ISM-equivalent terms, the fastest pace in 4 years, and April's industrial production beat with a broadening out of the manufacturing recovery. Despite the war, the manufacturing reacceleration that tariffs delayed but didn't destroy looks surprisingly robust, though that may change as supply constraints bind more. Globally the hits have been worse but manufacturing data has shown more resilience than expected. April retail sales beat with the control group up a tenth above consensus and a positive revision to an already strong March, leaving nominal trend around 4.5-5%. Jobless claims still look strong. With balance sheets healthy and nominal demand humming, the US should see the war shock more on the price than quantity side.*

- ***Global Rates Moved Sharply Higher.*** *The week saw sharp moves higher in global rates. The US, Germany, Canada, and Australia saw closer to parallel shifts while the UK and Japan saw much more aggressive long-end steepening with fiscal and political worries top of mind. 10y USTs are past the 4.25-4.50 fair value range we expected to drift to this year, in a very different year than expected. Near-term policy expectations are still well-off cycle highs but long-term forwards have been near or past cycle highs. This is a notable compositional contrast to earlier in the cycle when peak policy rate expectations paired with more modest assumptions about post-covid structural changes further out the curve.*

Don’t believe the hype, for now.

WGS: What can go wrong???? A LOT.

I LOVED this name, approximately where the red lines point to breakouts. I always say job #1 is cutting losses and bailing when stocks break below the 50DSMA, THE GUARD RAIL.

▼ Dominant Fundamental Factors (DFF)

Current Dominant Fundamental Factors in order of importance:

- **Crude and treasury yields.**
- **Trump administration, deregulation greasing the gears of commerce and jet fueling the "Golden Goose of Capitalism" and Free Markets.**
- **AI**
- **Semiconductors**
- **Crypto, Stablecoins, Digital Asset Ecosystem, and DeFi**
- **Biotech**
- **EVs**

CREATIVE PLANNING					@CharlieBilello		

Check out the forward performance above with the conditions we are experienced in April 2025. The odds are very favorable for IT and LT. Bill would be positioning himself with capital to pounce. Remember, just like in 2024, there will be dozens of stocks that will go up hundreds of percent.

75 years of evidence that prices will be dramatically higher in 12 months. If history repeats, what will it do for your net worth? What did 2024 do for your net worth?

Differential				**6.6%**	**10.6%**	**11.0%**	**20.1%**	**18.4%**
CREATIVE PLANNING						@CharlieBilello		

Opportunities this good are rarely presented.

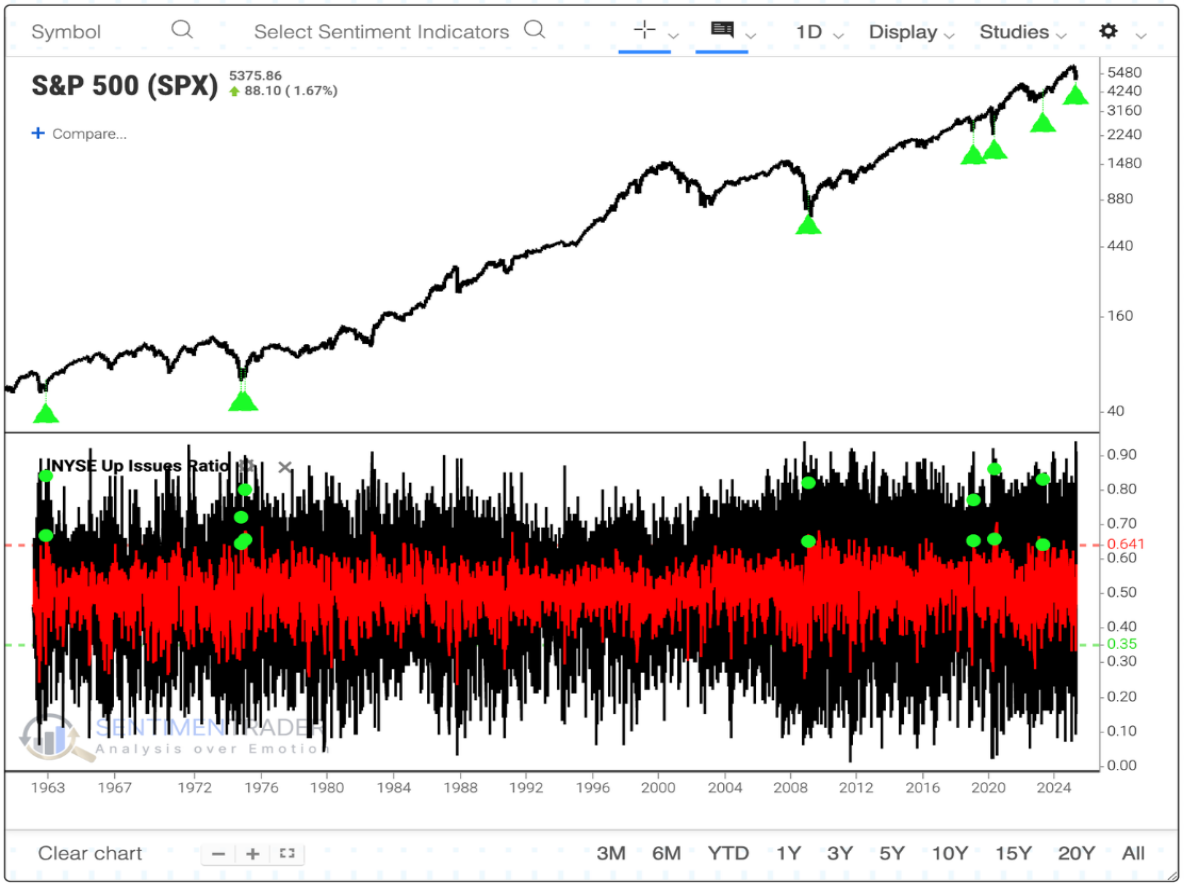

A third leg down is possible, just like 2020 and 1998, but this decline has been so swift that it increases the odds of a V-shaped recovery.

Talk about a bear killer.

S&P 500 after NYSE SuperZweig thrust signal

With all the historical evidence that bear conditions, like we just experienced, prices will be higher in 12+ months. Right now is the time to be funding your war chest for the growing opportunity to move up to a higher financial station. I feel the opportunity will be equivalent to 2024.
